## Connection

## Configuration

The switch is plug and play. To manage the switch, you can use the Web-based GUI or the configuration utility. The utility is provided on the resource CD and only supported on Windows now.

### Using the Web-based GUI

1. Prepare your computer with a static IP address 192.168.0.x ("x" ranges from 2 to 254), and a subnet mask 255.255.255.0.
2. Visit the Web-based GUI with the default IP address of the switch <http://192.168.0.1>, and log in with **admin** as both user name and password. Then configure the switch on the GUI.

### Using the configuration utility

1. Insert the resource CD into a computer connected to the switch.

2. The resource CD home screen will appear. If not, double click **AutoRun.exe** on the resource CD. Then click **Install Easy Smart Configuration Utility** on the home screen and follow the prompts to install the program.

3. Double click the icon on the desktop, and the utility home page displays a list of TP-LINK Easy Smart Switches on the local network.

4. Make sure the switch that you want to manage is in the same subnet as your computer. You can click to configure the switch IP address.
5. Double click the switch that you want to configure. Next enter the username and password (both **admin**) for it. Then use the utility to configure the switch.

For more details, see the **User Guide** and the **Easy Smart Configuration Utility User Guide** on the resource CD.

# Frequently Asked Questions (FAQ)

## Q1. The Power LED is not lit

The Power LED should be lit when the power system is working normally. If the Power LED is not lit, please check as follows:

**A1:** Make sure the power adapter is connected to the switch with power source properly.

**A2:** Make sure the voltage of the power supply meets the requirements of the input voltage of the switch.

**A3:** Make sure the power source is ON.

## Q2. The Link/Act LED is not lit when a device is connected to the corresponding port

It is recommended that you check the following items:

**A1:** Make sure that the cable connectors are firmly plugged into the switch and the device.

**A2:** Make sure the connected device is turned on and works normally.

**A3:** The cable must be less than 100 meters long (328 feet).

## Q3. Why is port 4 not supplying power for PoE devices?

If connected PoE devices' total power consumption exceeds 55W, the system will cut off the power of port 4. For example, port 1, 2 and 4 are consuming 15.4W respectively, if an additional PoE device with 12W is inserted to port 3, the system will cut off the power of port 4 to compensate for the overload.
