

## How to update the firmware using tpPLC Utility (new logo)?

We will release the latest firmware at TP-Link official website (<http://www.tp-link.com>). You can download and upgrade the latest firmware for your device.

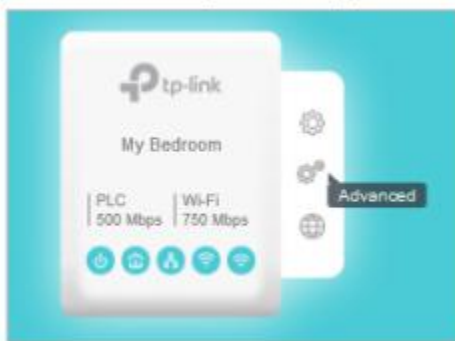

**Tips:** For a powerline extender, it's better to back up your current settings and update the firmware on the web management interface.

To update the firmware, follow the steps below:

1. Download the latest firmware package specific to your product model from the support page at <http://www.tp-link.com>.
2. Decompress the package to obtain the update file(s).

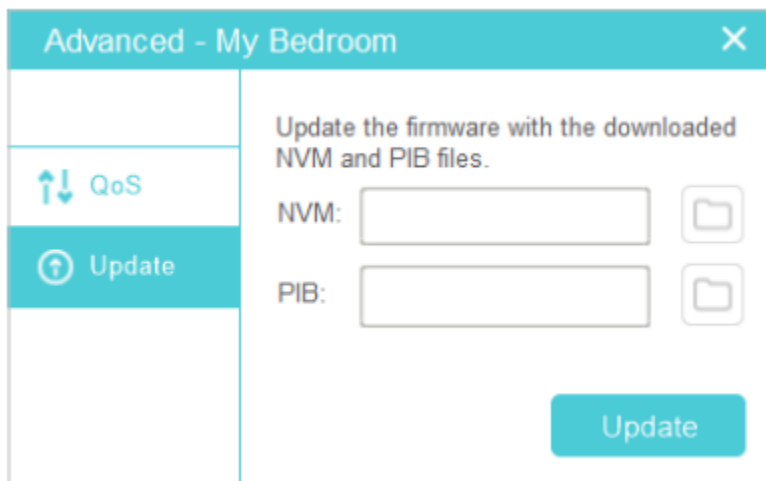

**Note:** You may obtain simply a BIN file, a GGL file or a combination of NVM and PIB files, depending on the product model.

3. Open the utility, move your mouse over a device, and click the  (**Advanced**) icon.

4. Go to the **Update** page.

You may see either of the following pages, depending on the product model.

A screenshot of the 'Advanced - My Bedroom' firmware update page. The page has a teal header with the title 'Advanced - My Bedroom' and a close button. On the left, there is a sidebar with three buttons: 'QoS' (with up/down arrows), 'Update' (with a plus icon), and a third button. The 'Update' button is highlighted. The main content area has the text 'Update the firmware with the downloaded NVM and PIB files.' Below this, there are two input fields: 'NVM:' and 'PIB:'. Each field has a folder icon to its right for file selection. At the bottom right, there is a large teal 'Update' button.

Advanced - DEVICE-0001

Update

5. Select the obtained update file(s), and click **Update**.

6. Wait for the upgrading to complete.

**Note:** During the upgrading process, do not turn off or reset the powerline device.

**Get to know more details of each function and configuration please go to [Download Center](#) to download the manual of your product.**
