Jetstream L2 Managed Switch

TL-SG5412F/T2500G-10MPS
T2500G-10TS (TL-SG3210)/T2500-28TC (TL-SL5428E)
T2600G-18TS (TL-SG3216)/T2600G-28TS (TL-SG3424)
T2600G-52TS (TL-SG3452)/T2600G-28MPS (TL-SG3424P)
About this Installation Guide

This Installation Guide describes the hardware characteristics, installation methods and the points that should be attended to during the installation. This Installation Guide is structured as follows:

Chapter 1 Introduction
This chapter describes the external components of the switch.

Chapter 2 Installation
This chapter illustrates how to install the switch.

Chapter 3 Connection
This chapter illustrates how to do the physical connection of the switch.

Appendix A Troubleshooting
Appendix B Hardware Specifications

Audience

This Installation Guide is for:
Network Engineer                      Network Administrator

Conventions

- Some models featured in this guide may be unavailable in your country or region. For local sales information, visit https://www.tp-link.com.

- The figures in Chapter 2 to Chapter 3 are for demonstration purposes only. Your switch may differ in appearance from that depicted.

- This Guide uses the specific formats to highlight special messages. The following table lists the notice icons that are used throughout this guide.

Chapter 1 Introduction

1.1 Product Overview

Designed for workgroups and departments, TP-Link JetStream L2 Managed Switch provides wire-speed performance and abundant L2 management features. It provides a variety of service features and multiple powerful functions with high security.

The EIA-standardized framework and smart configuration capacity can provide flexible solutions for a variable scale of networks. ACL, 802.1x and Dynamic ARP Inspection provide robust security strategies. QoS and IGMP snooping/filtering optimize voice and video application. Link aggregation (LACP) increases aggregated bandwidth, optimizing the transport of business critical data. SNMP, RMON, WEB and CLI Log-in bring abundant management policies. TP-Link JetStream L2 Managed Switch integrates multiple functions with excellent performance, and is friendly to manage, which can fully meet the need of the users demanding higher networking performance.

T2500G-10MPS/T2600G-28MPS is also a Power Sourcing Equipment (PSE*). All the RJ45 ports on the switch support Power over Ethernet (PoE*) function, which can automatically detect and supply power with those powered devices (PDs*) complying with IEEE 802.3af and IEEE 802.3at.

*PSE: a device (switch or hub for instance) that provides power through an Ethernet cable.

*PoE: This technology describes a system to transmit electrical power, along with data, to remote devices over standard twisted-pair cable in an Ethernet.

*PD: a device powered by a PSE and thus consumes energy. Examples include powering network cameras, wireless LAN access points, IP telephones, network hubs, embedded computers etc.

</tr>
<tr>
<td>Link/Act</td>
<td>On: A device is linked to the corresponding port and running properly.&lt;br&gt;Flashing: Transmitting or receiving data.&lt;br&gt;Off: No device is linked to the corresponding port.&lt;br&gt;Note: For TL-SG5412F/T2600G-18TS/ T2600G-28TS/T2600G-52TS.</td>
</tr>
</tbody>
</table>
JetStream L2 Managed Switch

T2500G-10MPS/T2600G-28MPS has an LED mode switch button which is used to switch the LED status indication. When the Speed LED is on, the port LED is indicating the data transmission rate. When the PoE LED is on, the port LED is indicating the power supply status. By default the Speed LED is on. Pressing the mode switch button, the Speed LED will turn off and the PoE LED will light up. Then the PoE LED will turn off after being on for 60 seconds and the Speed LED will light up again.

### LED Indication

<table>
<thead>
<tr>
<th>LED</th>
<th>Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td>PWR</td>
<td><strong>On</strong>: The switch is powered on.</td>
</tr>
<tr>
<td></td>
<td><strong>Off</strong>: The switch is powered off or power supply is abnormal.</td>
</tr>
<tr>
<td></td>
<td><strong>Flashing</strong>: Power supply is abnormal.</td>
</tr>
<tr>
<td>SYS</td>
<td><strong>Flashing</strong>: The switch works properly.</td>
</tr>
<tr>
<td>FAN</td>
<td><strong>On or Off</strong>: The switch works improperly.</td>
</tr>
<tr>
<td>PoE Max</td>
<td><strong>On</strong>: The remaining PoE power ≤7W.</td>
</tr>
<tr>
<td></td>
<td><strong>Flashing</strong>: The remaining PoE power keeps ≤7W after this LED is on for 2 minutes.</td>
</tr>
<tr>
<td></td>
<td><strong>Off</strong>: The remaining PoE power &gt;7W.</td>
</tr>
</tbody>
</table>

**Speed or PoE**: (When the Speed LED is on)

<table>
<thead>

<tr>
<td></td>
<td><strong>Yellow On</strong>: A 100Mbps device is linked to the corresponding port, but no activity.</td>
</tr>
<tr>
<td></td>
<td><strong>Yellow Flashing</strong>: A 100Mbps device is linked to the corresponding port and is transmitting or receiving data.</td>
</tr>
<tr>
<td></td>
<td><strong>Off</strong>: No device is linked to the corresponding port but no activity.</td>
</tr>
<tr>
<td></td>
<td>Note: Only for T2500G-10MPS.</td>
</tr>
</tbody>
</table>

**Console Port (RJ-45/USB)**

Designed to connect with the USB port of a computer for monitoring and configuring the switch. For T2500G-10TS/T2500G-10MPS/T2600G-18TS/T2600G-28TS/T2600G-52TS/T2600G-28MPS, the switch has an RJ-45 console port and a micro-USB console port. Console input is active on only one console port at a time. By default, the micro-USB connector takes precedence over the RJ-45 connector.
JetStream L2 Managed Switch

10/100Mbps RJ45 Port
Designed to connect to the device with a bandwidth of 10Mbps or 100Mbps.

10/100/1000Mbps RJ45 Port
Designed to connect to the device with a bandwidth of 10Mbps, 100Mbps or 1000Mbps. For T2500G-10MPS/T2600G-28MPS, the port can also provide power for PDs.

SFP Port
Designed to install the SFP module. For T2500-28TC, the switch features some slots that are shared with the associated RJ45 ports. The associated two ports are referred as a "Combo" port, which means they cannot be used simultaneously, otherwise only SFP port works.

Rear Panel
The rear panel is shown as the following figure. Here we take T2600G-28TS as an example.

Kensington Security Slot
Secure the lock (not provided) into the security slot to prevent the device from being stolen.

Grounding Terminal
The switch already comes with lightning protection mechanism. You can also ground the switch through the PE (Protecting Earth) cable of AC cord or with Ground Cable. For detailed information, please refer to the Lightning Protection Guide from the training center of our website: https://www.tp-link.com/en/configuration-guides/lightning_protection_guide/?configurationId=2962.

Power Socket
Connect the female connector of the power cord here, and the male connector to the AC power outlet. Please make sure the voltage of the power supply meets the requirement of the input voltage (100-240V~50/60Hz).

Note:
- Please use the provided power cord.
- TL-SG5412F/T2500-28TC does not have a kensington security slot.
Chapter 2 Installation

2.1 Package Contents

Make sure that the package contains the following items. If any of the listed items is damaged or missing, please contact your distributor.

- One Switch
- One Power Cord, One Console Cable and One USB Cable
- Installation Guide
- One Resource CD
- Two mounting brackets and the fittings

Note:
The USB Cable is not provided with TL-SG5412F/T2500-28TC.

2.2 Safety Precautions

To avoid any device damage and bodily injury caused by improper use, please observe the following rules.

- Safety Precautions
  - Keep the power off during the installation.
  - Wear an ESD-preventive wrist strap, and make sure that the wrist strap has a good skin contact and is well grounded.
  - Use only the power cord provided with the switch.
  - Make sure that the supply voltage matches the specifications indicated on the rear panel of the switch.
  - Ensure the vent hole is well ventilated and unblocked.
  - Do not open or remove the cover of the switch.
  - Before cleaning the device, cut off the power supply. Do not clean it by the waterish cloth, and never use any other liquid cleaning method.
  - Place the device with its bottom surface downward.
Site Requirements

Temperature/Humidity

Please keep a proper temperature and humidity in the equipment room. Too high/low humidity may lead to bad insulation, electricity leakage, mechanical property changes and corrosions. Too high temperature may accelerate aging of the insulation materials and thus significantly shorten the service life of the device. For normal temperature and humidity of the device, please check the following table.

<table>
<thead>
<tr>
<th>Environment</th>
<th>Temperature</th>
<th>Humidity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating</td>
<td>0°C to 40°C</td>
<td>10% to 90%RH Non-condensing</td>
</tr>
<tr>
<td>Storage</td>
<td>-40°C to 70°C</td>
<td>5% to 90%RH Non-condensing</td>
</tr>
</tbody>
</table>

Clearness

The dust accumulated on the switch can be absorbed by static electricity and result in poor contact of metal contact points. Some measures have been taken for the device to prevent static electricity, but too strong static electricity can cause deadly damage to the electronic elements on the internal circuit board. To avoid the effect of static electricity on the operation of the Switch, please attach much importance to the following items:

- Dust the device regularly, and keep the indoor air clean.
- Keep the device well grounded and ensure static electricity has been transferred.

Electromagnetic Interference

Electronic elements including capacitance and inductance on the device can be affected by external interferences, such as conducted emission by capacitance coupling, inductance coupling, and impedance coupling. To decrease the interferences, please make sure to take the following measures:

- Use the power supply that can effectively filter interference from the power grid.
- Keep the device far from high-frequency, strong-current devices, such as radio transmitting station.
- Use electromagnetic shielding when necessary.
Lightening Protection

Extremely high voltage currents can be produced instantly when lightning occurs and the air in the electric discharge path can be instantly heated up to 20,000°C. As this instant current is strong enough to damage electronic devices, more effective lightning protection measures should be taken.

- Ensure the rack and device are well earthed.
- Make sure the power socket has a good contact with the ground.
- Keep a reasonable cabling system and avoid induced lightning.
- Use the signal SPD (Surge Protective Device) when wiring outdoor.

Note: For detailed lightning protection measures, please refer to the Lightning Protection Guide from the training center of our website: https://www.tp-link.com/en/configuration-guides/lightning_protection_guide/?configurationId=2962.

Installation Site

When installing the device on a rack or a flat workbench, please note the following items:

- The rack or workbench is flat and stable, and sturdy enough to support the weight of 5.5kg at least.
- The rack or workbench has a good ventilation system. The equipment room is well ventilated.
- The rack is well grounded. Keep the power socket less than 1.5 meters away from the device.

2.3 Installation Tools

- Phillips screwdriver
- ESD-preventive wrist wrap
- Cables

Note: These tools are not provided with our product. If needed, please self purchase them.

2.4 Product Installation

- Desktop Installation

To install the device on the desktop, please follow the steps:

1. Set the device on a flat surface strong enough to support the entire weight of the device with all fittings.
2. Remove the adhesive backing papers from the rubber feet.

3. Turnover the device and attach the supplied rubber feet to the recessed areas on the bottom at each corner of the device.

---

**Rack Installation**

To install the device in an EIA standard-sized, 19-inch rack, follow the instructions described below:

1. Check the grounding and stability of the rack.

2. Secure the supplied rack-mounting brackets to each side of the device with supplied screws, as illustrated in the following figure.

3. After the brackets are attached to the device, use suitable screws (not provided) to secure the brackets to the rack, as illustrated in the following figure.

---

**Caution:**
- Please set 5 to 10cm gaps around the device for air circulation.
- Please avoid any heavy thing placed on the device.
- Please mount devices in sequence from the bottom to top of the rack and ensure a certain clearance between devices for the purpose of heat dissipation.
Chapter 3 Connection

3.1 Ethernet Port

Connect an Ethernet port of the switch to the computer by RJ45 cable as the following figure shows.

![Connecting the RJ45 Port](image)

3.2 SFP Port

The following figure demonstrates the connection of SFP port to an SFP module.

![Inserting the SFP Module](image)

3.3 Console Port

CLI (Command Line Interface) enables you to manage the switch, thus you can load the CLI after connecting the PCs or Terminals to the console port on the switch via the provided cable.

Connect the Console (RJ-45) port of the device with your computer by the console cable as the following figure shows.
Connect the Console (USB) port of the device with your computer by the USB cable as the following figure shows.

**Note:**
- Console (RJ-45) port and Console (USB) port cannot be used concurrently. Console (USB) port takes priority over the Console (RJ-45) port.
- The Console (USB) port is hot-pluggable while the Console (RJ-45) port is not. Please keep the device power off when plugging the console cable into the Console (RJ-45) port.
- Do not connect the console port with other ports by RJ45 cable.
- TL-SG5412F and T2500-28TC do not have a Console (USB) port.

### 3.4 Verify Installation

After completing the installation, please verify the following items:

- There are 5 to 10cm of clearance around the sides of the device for ventilation and the air flow is adequate.
- The voltage of the power supply meets the requirement of the input voltage of the device.
- The power socket, device and rack are well grounded.
- The device is correctly connected to other network devices.
3.5 **Power On**

Plug in the negative connector of the provided power cord into the power socket of the device, and the positive connector into a power outlet as the following figure shows.

![Connecting to Power Supply](image)

**Note:**
The figure is to illustrate the application and principle. The power plug you get from the package and the socket in your situation will comply with the regulation in your country, so they may differ from the figure above.

3.6 **Initialization**

After the device is powered on, it begins the Power-On Self-Test. A series of tests run automatically to ensure the device functions properly. During this time, its LED indicators will respond in the following order:

1. The PWR LED indicator lights on all the time. The SYS LED and the LED indicators of all the ports keep off.
2. After about one minute, the SYS LED and LED indicators of all the ports will flash momentarily and then turn off.
3. Several seconds later, the SYS LED indicator will flash, which represents a successful initialization.

3.7 **Accessing the Switch**

After the initialization finished, you can access and manage the switch using the GUI (Graphical User Interface) or using the CLI (Command Line Interface).

- To access the switch using the GUI, open a web browser and type the default management address `http://192.168.0.1` in the address field, then press the Enter key. The default Username and Password are both `admin` in lower case letters.
- To access the switch using the CLI, you can use the Console port, Telnet and SSH connection. When using the Console port, start the terminal emulation program (such as the Hyper Terminal) on the PC and configure the terminal emulation program as follows:

<table>
<thead>
<tr>
<th>Baud Rate</th>
<th>Data Bits</th>
<th>Parity</th>
<th>Stop Bits</th>
<th>Flow Control</th>
</tr>
</thead>
<tbody>
<tr>
<td>38400bps</td>
<td>8</td>
<td>None</td>
<td>1</td>
<td>None</td>
</tr>
</tbody>
</table>

For the detailed configurations, please refer to the Configuration Guide and CLI Reference Guide. The two guides can both be found on the resource CD or on the download center of our official website: https://www.tp-link.com/en/download-center.html.
Appendix A  Troubleshooting

Q1. What could I do if I forgot the username and password of the switch?

1. Connect the console port of the PC to the console port of the switch and open a terminal emulation program.

2. Power off and restart the switch. Perform the action indicated by the terminal emulation program to reach the bootUtil menu. The action differs from product to product. Possible actions are listed below:
   - Press any key to stop autoboot.
   - Press CTRL-B to reach the bootUtil menu.

3. The bootUtil menu will be shown. Enter the number 6 to select the “Password recovery” option and enter Y to delete all the users and passwords. The default login username and password are both admin. The other configurations in the switch will not be changed.

4. For models without the password recover feature, please select the “Reset” option to restore all the configurations to factory defaults. The default login username and password are both admin.

Q2. Why does the PWR/Power LED work abnormally?

The PWR/Power LED should be lit up when the power system works normally. If the PWR/Power LED worked abnormally, please take the following steps:

1. Make sure that the power cable is connected properly, and the power contact is normal.

2. Make sure the voltage of the power supply meets the requirement of the input voltage of the switch.

Q3. What should I do if I cannot access the web management page?

Please try the following:

1. Check every port LED on the switch and make sure the Ethernet cable is connected properly.

2. Try another port on the switch and make sure the Ethernet cable is suitable and works normally.

3. Power off the switch and, after a while, power it on again.

4. Make sure the IP address of your PC is set within the subnet of the switch.

5. If you still cannot access the configuration page, please restore the switch to its factory defaults. Then the IP address of your PC should be set as 192.168.0.x (“x” is any number from 2 to 254) and Subnet Mask as 255.255.255.0.

Q4. Why is the terminal emulation program not displaying correctly?

Please try the following:

1. Make sure the power supply is normal and the console cable is properly connected.

2. Check if the console cable is the right type.

3. Ensure the parameters of the terminal emulation program are correct: configure Bits per second as 38400, Data bits as 8, Parity as None, Stop bits as 1, and Flow control as None.

FCC STATEMENT

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1) This device may not cause harmful interference.
2) This device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

CE Mark Warning

This is a class A product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

EU declaration of conformity

TP-Link hereby declares that the device is in compliance with the essential requirements and other relevant provisions of directives 2014/30/EU, 2014/35/EU, 2009/125/EC and 2011/65/EU.

The original EU declaration of conformity may be found at http://www.tp-link.com/en/ce

Safety Information

• When product has power button, the power button is one of the way to shut off the product; when there is no power button, the only way to completely shut off power is to disconnect the product or the power adapter from the power source.
• Don’t disassemble the product, or make repairs yourself. You run the risk of electric shock and voiding the limited warranty. If you need service, please contact us.
• Avoid water and wet locations.
BSMI Notice

安全諮詢及注意事項

• 請使用原裝電源供應器或只能按照本產品注明的電源類型使用本產品。
• 清潔本產品之前請先拔掉電源線。請勿使用液體、噴霧清潔劑或濕布進行清潔。
• 注意防潮，請勿將水或其他液體潑濺到本產品上。
• 插槽與開口供通風使用，以確保本產品的操作可靠並防止過熱，請勿堵塞或覆蓋開口。
• 請勿將本產品置放於靠近熱源的地方。除非有正常的通風，否則不可放在密閉位置中。
• 請不要私自打開機殼，不要嘗試自行維修本產品，請由授權的專業人士進行此項工作。
• 此為甲類資訊技術設備，於居住環境中使用時，可能會造成射頻擾動，在此種情況下，使用者會被要求採取某些適當的對策。
