Highlights

MU-MIMO for 3× Faster Connections

MU-MIMO technology serves up to three devices at once, reducing wait time, increasing Wi-Fi throughput for every device, and making each stream more efficient.

Traditional Router
Sends data to one device at a time

MU-MIMO Router
Simultaneously sends data to multiple devices

Range Boost for Better Whole Coverage

Range Boost greatly improves the routers ability to detect devices that are further away or low-powered, giving your network even greater coverage.

without Range Boost
Can not receive weak signals

with Range Boost
Greatly expands receive coverage

*NitroQAM™ technology by Broadcom®

*Maximum wireless transmission rates are the physical rates derived from IEEE Standard 802.11 specifications. Range and coverage specifications are based on test results under normal usage conditions. Actual wireless transmission rate and wireless coverage are not guaranteed, and will vary as a result of 1) environmental factors, including building materials, physical objects and obstacles, 2) network conditions, including local interference, volume and density of traffic, product location, network complexity, and network overhead and 3) client limitations, including rated performance, location, connection quality, and client condition.

*Three or more 1×1 MU-MIMO-enabled client devices must be connected to achieve up to three (3) times faster performance.
