<sup>†</sup>Maximum wireless signal rates are the physical rates derived from IEEE Standard 802.11 specifications. Actual wireless data throughput and wireless coverage are not guaranteed and will vary as a result of network conditions, client limitations and environmental factors, including building materials, obstacles, volume and density of traffic and client location.

<sup>‡</sup>Four or more 1×1 MU-MIMO client devices must be connected to achieve up to four times faster performance. Use of MU-MIMO requires clients to also support MU-MIMO.
