### ▼ BACKGROUND

Side Royal Paradise is a five-star hotel located in Side, a resort town on Turkey's southern Mediterranean coast, featuring marvelously long and scenic beaches. Sights include the white marble columns of the Hellenistic Temple of Athena among other cultural and historic Greco-Roman ruins that look just as illustrated in any historical textbook. Hundreds of thousands of tourists come here and enjoy the natural beauty and unique view each year.

If you want to enjoy some great moments with your friends and family, you are at the right place. Side Royal Paradise Hotel provides excellent accommodation, with its modern architecture, diverse venues and entertaining activities waiting to be discovered. No matter indoors or outdoors, on-demand Wi-Fi connectivity is guaranteed, ensuring an always connected vacation.

## ▼ SOLUTION

TP-Link provided a suitable networking solution for Side Royal Paradise.

### • High Performance and Reliable Network

The network was comprised of 6x T2600G-28MPS along with the proper SFP modules, which provides bandwidth up to 1000 Mbps. More than 100 EAPs supply full-coverage Wi-Fi for guests in rooms, canteens and outdoor pools.

### • Convenient Centralized management

The Omada Software Controller offers centralized management access, which ensures the scaled network and the vast number of devices are conveniently managed via one platform.

### • Guest Portal Login & Advertisement

Omada EAPs provide flexible portals for managers, which come in handy in various scenarios. Portal login can meet guests' demands for flexible Wi-Fi connectivity and promote the business via the customized advertisement.

### • Network efficiency

The implemented solution comes with a bunch of advanced features, including Bandwidth Control, which ensures the network resources are allocated fairly and efficiently among guests.
