2021 TP-Link

*Maximum wireless signal rates are the physical rates derived from IEEE Standard 802.11 specifications. Actual wireless data throughput and wireless coverage are not guaranteed and will vary as a result of network conditions, client limitations, and environmental factors, including building materials, obstacles, volume and density of traffic, and client location.

*Use of OFDMA and 1024-QAM requires clients to also support those functions.

*4x average throughput refers to 4x increase in median throughput under dense environment (i.e. 8+ Wi-Fi 6 devices connected with combined speeds not higher than ISP offers) compared to a 2x2 11ac wave 2 router.

*1,000 Mbps internet speeds require compatible service plans and equipment.
