

Multi-mode Router

Meet all your needs.

TL-WR940N

Router Mode

If your internet connection is through an Ethernet cable from the wall, instead of through a modem, connect the Ethernet cable directly to the router's Internet port, and skip Step 1, 2 and 3.

5 Configure the router

1. Connect your computer to the router (Wired or Wireless)

Wired

Turn off the Wi-Fi on your computer and connect it to the router via an Ethernet cable.

Wireless

Connect your device to the router's Wi-Fi using the SSID (Network Name) and Wireless Password printed on the label at the bottom of the router.

2. Launch a web browser, and enter <http://tplinkwifi.net> or <http://192.168.0.1> in the address bar. Use **admin** for both username and password, and then click **Login**.

Note: If the login window does not appear, please refer to FAQ > Q1.

3. Click **Next** to start the Quick Setup. Select **Standard Wireless Router** and follow the step-by-step instructions of the Quick Setup to complete the initial configuration.

Note: If you are not sure of the WAN Connection Type, please click Auto-Detect.

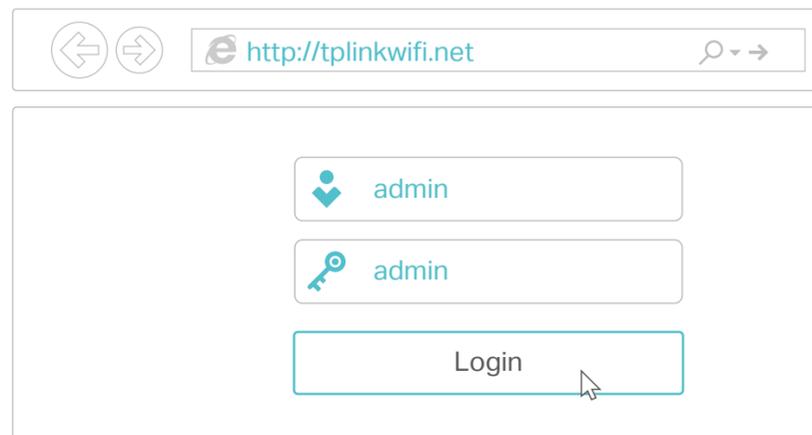

Enjoy!

Range Extender Mode

In Range Extender mode, the router boosts the existing wireless coverage in your home.

1. Configure

- Place the router next to your host router and turn it on.
- Connect a computer to the router via an Ethernet cable or wirelessly by using the SSID (Network Name) and Wireless Password printed on the label at the bottom of the router.
- Launch a web browser and enter <http://tplinkwifi.net> in the address bar. Use **admin** for both the username and password, and then click **Login**.

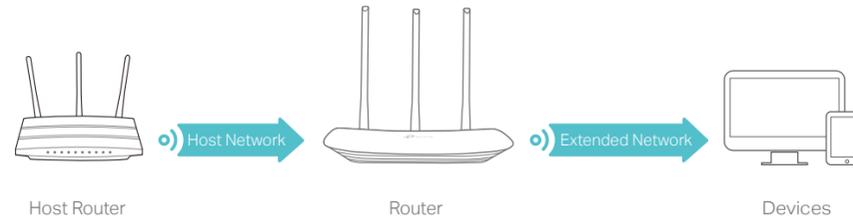

- Click **Next** to start the Quick Setup. Select **Range Extender** and follow the step-by-step instructions of the Quick Setup to complete the initial configuration.

Note: Click **Survey** to find your host network you want to connect to, and then enter its wireless password.

2. Relocate

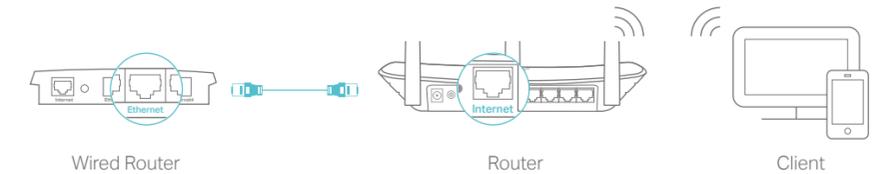

Place the router about halfway between your host router and the Wi-Fi "dead" zone. The location you choose must be within the range of your existing host network.

The extended network shares the same **SSID (network name)** and **password** as those of your host network.

Access Point Mode

In Access Point mode, the router transforms your existing wired network to a wireless one.

- Turn on the router.
- Connect the router to your wired router's Ethernet port via an Ethernet cable as shown above.
- Connect a computer to the router via an Ethernet cable or wirelessly by using the SSID (Network Name) and Wireless Password printed on the label at the bottom of the router.
- Launch a web browser and enter <http://tplinkwifi.net> in the address bar. Use **admin** for both the username and password to log in.
- Click **Next** to start the Quick Setup. Select **Access Point** and follow the step-by-step instructions of the Quick Setup to complete the initial configuration.

Connect to the wireless network by using the **SSID (network name)** and **password** of the router.

LED Indicator

Status	Explanation
On (Orange)	Power is on, but there is no internet connection.
On (Blue)	Router mode: The router is connected to the internet. Range Extender mode: The router is connected to the host network. Access Point mode: At least one of the router's WAN/LAN ports is connected.
Blinking slowly	The system is starting up or firmware is being upgraded. Do not disconnect or power off your router.
Blinking quickly	WPS connection is in progress. This may take up to 2 minutes.

Tether App

The TP-Link Tether app provides a simple, intuitive way to access and manage your router. You can scan the QR code to download it from the Apple App Store or Google Play.

FAQ (Frequently Asked Questions)

Q1. What should I do if I cannot access the web management page?

- If the computer is set to a static or fixed IP address, change the settings to obtain an IP address and DNS server address automatically.
- Verify that <http://tplinkwifi.net> or <http://192.168.0.1> is correctly entered in the web browser. Alternatively, enter <http://192.168.1.1> in the web browser and press **Enter**.
- Use another web browser and try again.
- Reboot your router and try again.
- Disable and then enable the network adapter being used.

Q2. What should I do if I cannot access internet in Router mode?

- Check if the internet is working normally by connecting a computer directly to the modem using an Ethernet cable. If it is not, contact your internet service provider.
- Log in to the web management page of the router, and go to the **Status** page to check whether the WAN IP address is valid or not. If it is, please run the Quick Setup again; otherwise, check the hardware connection.
- Reboot your router and try again.
- For cable modem users, log in to the web management page of the router. Go to **Network > MAC Clone**, select **Clone MAC Address** and click **Save**. Then reboot both the modem and the router.

Q3. How do I restore the router to its factory default settings?

- With the router powered on, press and hold the **Reset** button on the back panel of the router until the LED blinks.
- Log in to the web management page of the router. Go to **System Tools > Factory Defaults**, and click **Restore**. The router will restore and reboot automatically.

Q4. What should I do if I forget my web management password?

- Refer to FAQ > Q3 to reset the router, and then use **admin** (all lowercase) for both username and password to log in.

Q5. What should I do if I forget my wireless network password?

- The factory default wireless password is printed on the label of the router.
- Connect a computer directly to the router using an Ethernet cable. Log in to the router's web management page, and go to **Wireless > Wireless Security** to obtain or reset your wireless password.
