Package List

• TL-R600VPN   • Ethernet Cable   • Power Adapter   • Installation Guide

Connection

Connect the WAN port of the router to the cable or the DSL modem with an Ethernet cable.

Connect the LAN port of the router to the computer with an Ethernet cable.

Connect the AC power socket on the router to an electrical outlet with the power adapter provided.

Configuration

1. Connect a PC to a LAN port of the router with a RJ45 cable properly. If your computer is configured with a fixed IP, change it to "Obtain an IP address automatically".

2. Open a web browser and type the default management address http://192.168.0.1 in the address field of the browser, then press the Enter key.
   192.168.0.1

3. Create a username and a password for subsequent login attempts.

   tp-link

   For device security, please set an administrator account.

   User Name:
   Password:
   Confirm the Password:

   Note: please remember your administrator account name and password for login. These will be required for subsequent login attempts. If you forget your login details, you will need to reset the device to its factory defaults. To reset the device, power it on and then press and hold the Reset button for 5 seconds.

   Confirm

4. Use the username and password set above to log in to the webpage.

5. After a successful login, the main page will appear as shown below, and you can configure the function by clicking the setup menu on the left side of the screen.

Appendix: Troubleshooting

How do I restore the router to its factory default settings?

- With the router powered on, use a pin to press and hold the RESET button (for about 5 seconds) until the System LED lights up and flashes quickly. Then release the button and wait while the router reboots, restoring it to its factory default settings.

- Log in to the web management page of the router. Go to **System Tools > Management > Factory Default Restore**, and click **Factory Restore.** The router will restore and reboot automatically.

What should I do if I forget the user name and password for the router's web management page?

You can restore the router to factory defaults. The default management address of the router is http://192.168.0.1. You can manually set a new username and password for login. All current settings will be cleared once the router is restored. If you have a backup of your configurations, you can import it after the factory restore is completed.

For technical support and other information, please visit http://www.tp-link.com/support, or simply scan the QR code.

Why is the Power LED working abnormally?

The Power LED should be lit when the power system is working normally. If it is not, please check the following:

1) Make sure that the power cable is connected properly, and the power contact is normal.
2) Make sure the voltage of the power supply meets the requirements for the input voltage of the router.

Why is the web management page not displaying properly?

Please try the following:

1) Update your web browser or try a different web browser.
2) If pop-ups are being blocked, please lower the security level of your web browser.

What should I do if I can't access the web management page?

- If the computer is set to a static or fixed IP address, change its settings to obtain an IP address automatically.
- Enter http://192.168.0.1 in the web browser and press Enter.
- Use another web browser and try again.
- Reboot your router and try again.
- Disable then enable the network adapter being used.

Safety Information

- When product has power button, the power button is one of the way to shut off the product; when there is no power button, the only way to completely shut off power is to disconnect the product or the power adapter from the power source.
- Don't disassemble the product, or make repairs yourself. You run the risk of electric shock and voiding the limited warranty. If you need service, please contact us.
- Avoid water and wet locations.
