

Quick Installation Guide

TL-WPA4220 TKIT

2 Plug in the adapter and extenders in the same room. Wait until the extenders' Wi-Fi LEDs turn on.
Note: If only one wall outlet is available, plug all devices into a power strip for setup, then relocate to wall outlets before enjoying the internet.

3 Pair Adapter and Extender A (the first extender you want to pair).

A Press the adapter's Pair button for 1 second. The Power LED starts blinking.

B Within 2 minutes, press the extender's Pair button for 1 second. The Power LED starts blinking. When the Powerline LED turns on, the pairing process is complete.

Note: If the LED does not blink, press the button again.

4 Pair Adapter and Extender B by referring to step 3. Extender B will automatically sync Wi-Fi settings from Extender A.

5 Enjoy!

Relocate the extenders to the Wi-Fi "dead zone" on the same electrical circuit. Connect your devices to the internet using the default SSID (network name) and password on the Wi-Fi Info Card provided for Extender A.

Note: If the Powerline LED on any extender turns red, it means the signal strength is poor. Try another wall outlet.

Tips: Want to unify Wi-Fi networks or personalize your network? See the back page for instructions.

Attention

Plug powerline devices into wall outlets. Do not use power strips after setup.

Unify Wi-Fi Networks via Wi-Fi Auto-Sync

Wi-Fi Auto-Sync enables you to easily create one unified Wi-Fi network throughout your home.

Copy the SSID and password from your router to one extender via WPS. The settings will then automatically sync to the other extender.

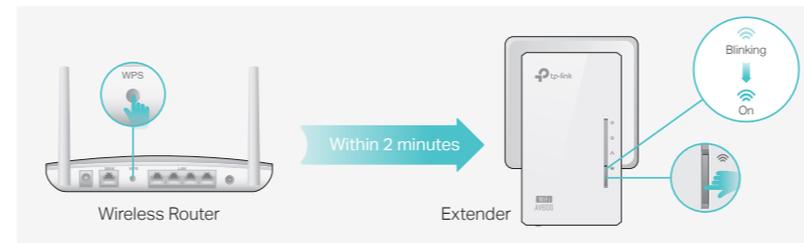

Note: If your router doesn't have a WPS button, manually change the extender's Wi-Fi settings via the tpPLC app, tpPLC Utility, or web interface.

Follow the steps below:

1. Plug in one extender in the same room as your router. Wait until the extender's Wi-Fi LED  turns on.
2. Press your router's WPS button. Within 2 minutes, press the extender's Wi-Fi button for 1 second. The extender's Wi-Fi LED  starts blinking. When it stays on, Wi-Fi settings are copied.

Note: If Wi-Fi settings are not copied within 2 minutes, manually change the extender's Wi-Fi settings.

3. The new Wi-Fi settings will automatically sync from this extender to the other extender.
4. Relocate the extender and enjoy the internet using your router's SSID and password.

Personalize Your Network

Manage your powerline devices using any of the methods below. You can change the SSID and password, set schedules for the Wi-Fi and LEDs, create a guest network and more. Wi-Fi settings and LED schedules configured on one extender will automatically sync to the other.

tpPLC App

For easy management via your smartphone or tablet, download the app from the App Store or Google Play, or simply scan the QR code.

tpPLC App

tpPLC Utility

For easy management via your computer, download the utility on the product's Support page at <http://www.tp-link.com>.

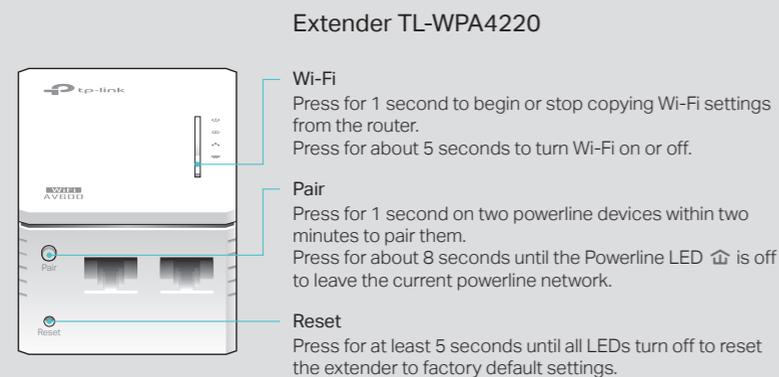

Note: For detailed instructions, refer to the utility manual on the product's Support page.

Web Interface

To access all settings, connect to an extender wirelessly and visit <http://tplinkplc.net>. Use 'admin' for both username and password upon initial login.

Note: For detailed instructions, refer to the product manual on the product's Support page.

Frequently Asked Questions

Q1. How do I reset my extender to factory default settings?

A. With the extender plugged into an electrical outlet, press and hold the Reset button until all LEDs turn off. When the LEDs turn back on, the reset process is complete.

Q2. What should I do if there is no internet connection in my powerline network?

- A1. Make sure all powerline adapters and extenders are on the same electrical circuit.
- A2. Make sure the Powerline LEDs  are lit on all of your powerline devices. If they are not, pair all devices again.
- A3. Make sure all devices are correctly and securely connected.
- A4. Check if you have an internet connection by connecting the computer directly to the modem or router.

Q3. What should I do if a successfully-paired extender does not reconnect after it is relocated?

- A1. Make sure all powerline adapters and extenders are on the same electrical circuit.
- A2. Try to pair the extender again, and make sure the Powerline LED  is on.
- A3. Check for possible interference due to a washing machine, air conditioner or other household appliance that may be too close to one of the powerline devices. Plug the appliance into the integrated electrical socket to remove the electrical noise if your powerline device has an integrated electrical socket.
