

Quick Installation Guide

AC750 Wireless Gigabit VoIP VDSL/ADSL Modem Router

Archer VR200v

Set up the Modem Router

If you don't require a traditional landline phone service, directly connect the modem router to the phone jack using a phone cable.

Package Content

Modem Router

DSL Splitter

Power Adapter

RJ11 Cable

Ethernet Cable

4 Wait for 1 to 2 minutes until the DSL LED  becomes stable.
Note: If the DSL LED does not stabilize, refer to FAQ > Q3.

5 Connect your network device to the modem router via a wired or wireless connection.

• Wired

Connect the computer to the LAN port of your modem router via an Ethernet cable.

• Wireless

a Find the SSID (network name) and Wireless Password printed on the product label, which is on the bottom of the modem router.

b Click the network icon on your computer or go to the Wi-Fi settings of your smart device, then select the router's SSID to join the network.

6 Launch a web browser and type in <http://tplinkmodem.net> or 192.168.1.1. Log in and follow the Quick Setup instructions to set up the internet connection and register the telephone number.

Phone Connection

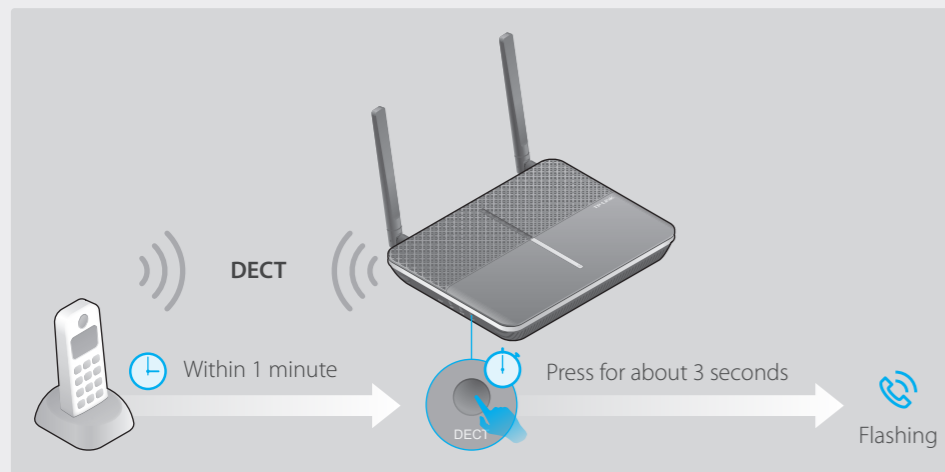

Analog Phone

Connect your analog phones to RJ11 ports on the router's back panel. You may connect up to two.

DECT Cordless Phone

A Open the registration page on your cordless phone. Press and hold the DECT button on the DSL router for about 3 seconds until the VoIP LED flashes.

B Enter the PIN (Default: 0000) on the cordless phone if required.

Smart Device

A Connect your smart device to the modem router's Wi-Fi network.

B Download and install the tpPhone app. Search for tpPhone on the Apple App Store or Google Play, or simply scan the QR code.

C Launch tpPhone and follow the instructions to set up.

Further Management

You can use the web management page to conveniently manage your home network. Open the page at <http://tplinkmodem.net> or 192.168.1.1.

You can also manage your home network via the TP-LINK Tether app. Scan the QR code to download the app, or search for TP-LINK Tether on the Apple App Store or Google Play.

For the User Guide, Firmware and other support, please visit our website at <http://www.tp-link.com/en/download-center.html>, or simply scan the QR code.

Features

Ethernet WAN Connection

Connect an Ethernet cable (RJ45) from your fiber or cable modem to the LAN4/WAN port of the modem router to use it as a wireless router. Refer to the User Guide for wireless router configuration.

3G/4G Connectivity

Connect a 3G/4G USB mobile broadband modem to the router's USB port to get wireless internet access through 3G/4G mobile networks. The USB dongle can be configured as the primary internet connection, or as a backup to enhance network reliability. Refer to the User Guide for instructions.

USB Features

USB ports can be used for printer, file and media sharing, both locally over your home network and remotely over the internet using the router's built-in FTP server capability.

To learn more about the USB features, visit <http://tp-link.com/app/usb> or scan the QR code.

Button Legend

LED On/Off
Press to turn the LEDs on or off.

DECT
Press and hold for about 3 seconds until the VoIP LED flashes to register your DECT cordless phone. Press to ring all registered cordless phones. Press again to stop.

WLAN
Press to turn both 2.4GHz and 5GHz Wi-Fi on or off.

WPS
Press until the WLAN LED (or) starts flashing to set up a secure Wi-Fi connection with a WPS supported device.

Reset
Press for at least 5 seconds until all LEDs turn on momentarily to reset the modem router to factory default settings.

FAQ (Frequently Asked Questions)

Q1. What can I do if the login page does not appear?

- If the computer is set to a static or fixed IP address, change the computer's settings to obtain an IP address automatically from the modem router.
- Verify <http://tplinkmodem.net> or 192.168.1.1 is correctly entered in the web browser and press Enter.
- Use another web browser and try again.
- Reboot your modem router and try again.
- Disable and enable the active network adapter.

Q2. What can I do if I cannot access the internet?

- Make sure the telephone and Ethernet cables are plugged in correctly.
- Try to log in to the web management page of the modem router using the default address at <http://tplinkmodem.net> or 192.168.1.1. If you cannot, change your computer settings to obtain an IP address automatically from the modem router. If you can, try the steps below.
- Consult your ISP and verify that the VPI/VCI (or VLAN ID), Connection Type, account username and password are correct. If they are not, please replace them with the correct settings and try again.
- Restore the modem router to its factory default settings and reconfigure it by following the instructions in this guide.
- Please contact our Technical Support if the problem persists.

Q3. What can I do if the DSL LED does not turn solid on?

- Check your cables and make sure they are all plugged in correctly, including the telephone lines and power adapter.
- Restore your modem router to its factory default settings.
- Remove the DSL splitter, directly connect the modem router to the phone jack and follow this Quick Installation to reconfigure the modem router.
- Contact your ISP to check the status of your DSL line.
- If the problem persists, contact TP-LINK's Technical Support.

Q4. What can I do if I forget my password?

- Web Management Password:** Restore the modem router to its factory default settings and then set a new password using 1-15 characters.
- Wireless Network Password:**
 - The default Wireless Password/PIN is printed on the product label of the modem router.
 - If the default wireless password has been changed, log in to the modem router's web management page and go to **Basic > Wireless** to retrieve or reset your password.

Q5. How do I restore the modem router to its factory default settings?

- With the modem router powered on, press and hold down the **Reset** button on the side panel for at least 5 seconds until all LEDs turn on momentarily, then release the button.
- Log in to the web management page of the modem router. Go to **Advanced > System Tools > Backup & Restore**, click **Factory Restore** and wait until the reset process is complete.
