

# Quick Installation Guide

Applicable Model: **RE360**

Note: RE360 (UK version) is used for demonstration in this QIG. Image may differ from actual products.

## LED Explanation

### Signal

**Solid blue:** The extender is connected to your router's wireless network and is in a suitable location.

**Solid red:** The extender is experiencing poor signal strength. Try relocating it closer to your router.

**Flashing blue:** WPS connection is being established.

**Off:** No wireless connection is established.

### Power

**On:** The extender is on.

**Flashing:** The extender is starting up.

**Off:** The extender is off.

### 2.4GHz/5GHz

**On:** The extender is connected to the 2.4GHz/5GHz wireless network of your host router.

**Off:** No wireless connection has been established.

### Ethernet

**On:** A powered-on device is connected to the Ethernet port.

**Off:** No powered-on device is connected to the Ethernet port.

## Option ONE Quick Setup Using Your Web Browser

### 1 Power on

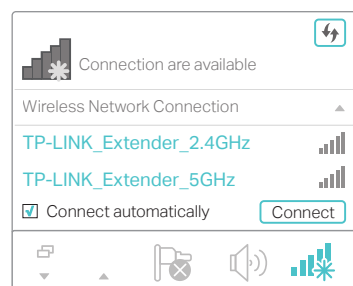

Plug your extender into a power outlet next to your router.

Wait until the Power LED is solid on.

### 2 Connect to the extender

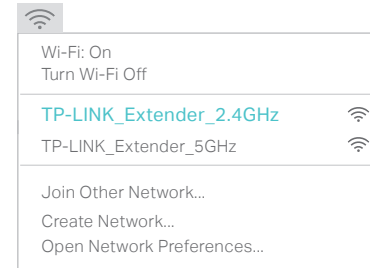

For Windows Users

1. Unplug the Ethernet cable from your computer (if any).
2. Click the Wi-Fi icon on the taskbar and connect to the extender's network TP-LINK\_Extender\_2.4GHz/5GHz.

or

For Mac OS X Users

1. Unplug the Ethernet cable from your Mac (if any).
2. Click the Wi-Fi icon in the top right corner of the screen and connect to the extender's network TP-LINK\_Extender\_2.4GHz/5GHz.

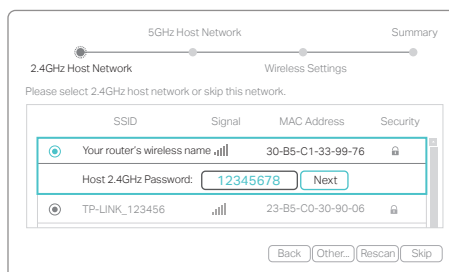

### 3 Configure

1. Launch a web browser and enter <http://tplinkrepeater.net> or <http://192.168.0.254> in the address bar. Create a password for future login attempts, and click Start.

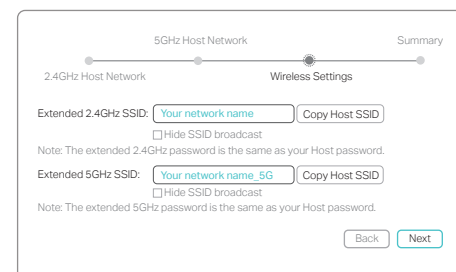

If the login window does not appear, please refer to [FAQ > Q1](#).

2. Select your router's 2.4GHz/5GHz host network, and enter its password. Then click Next.

If your router does not support 5GHz wireless network, please click **Skip** to continue.

3. Either keep the default SSIDs or customize them for the extended networks, and then click Next.

4. Verify your wireless settings and click Save. The corresponding LED(s) (2.4GHz/5GHz) should turn solid on.

### 4 Relocate

1. Plug in the extender about halfway between your router and the Wi-Fi dead zone. The location you choose must be within the range of the host network.
2. Wait until the Signal LED turns solid blue. If not, relocate it closer to the router to achieve better signal quality.

Blue: Suitable location  
Red: Too far away

Enjoy!

Both extended networks share the **same Wi-Fi passwords** as those of your host networks, but may have **different wireless network names (SSIDs)** if you have customized them during the configuration.

## Option TWO Quick Setup Using the WPS Button

WPS is an easier way to extend your host network. You are recommended to use this way if your host router has a WPS button.

The button might look like one of these:  |  | . Otherwise, please use Option ONE.

### 1 Power on

Plug the extender into a power outlet **next** to your router.

Wait until the Power LED is solid on.

### 2 Connect

1 Press the WPS button on your router, and then press the WPS button on the extender within 2 minutes.

The Signal LED should change from blinking to solid on, indicating successful connection. If not, please use Option ONE.

2 If you are connecting the extender to a dual band router but only the 2.4GHz or 5GHz LED is on, repeat Step 1 to connect to the other band.

1. Some ISP gateways disable the WPS function by default. If the WPS method fails, please refer to Option ONE.
2. For more information about using WPS on your router, please refer to the router manufacturer's user guide.

### 3 Relocate

- 1 Plug in the extender about halfway between your router and the Wi-Fi dead zone. The location you choose must be within the range of the host network.
- 2 Wait until the Signal LED  turns solid blue. If not, relocate it closer to the router to achieve better signal quality.

Blue: Suitable location  
Red: Too far away

 **Enjoy!** Both extended networks share the **same wireless network names (SSIDs)** and **passwords** as those of your host networks.

## Entertainment Adapter

The extender can be used as a wireless adapter to connect any Ethernet-only device such as a Blu-ray player, game console, DVR, or smart TV to your Wi-Fi network.

First, connect the extender to your router using Option ONE or Option TWO. Then connect your Ethernet-only device to the extender via an Ethernet cable.

Ethernet Connection

## TP-LINK Tether App

Tether provides a simple, intuitive way to access and manage your extender with your iOS or Android devices.

Set up the extender

Modify current settings

Turn on/off the LEDs

Block unwelcome devices

How to begin?

1. Download the Tether app from the App Store or Google Play Store.
2. Ensure your device is wirelessly connected to the extender or to the host router.
3. Launch the app and start managing your extended network.

Scan to download

## FAQ(Frequently Asked Questions)

Q1. What should I do if I cannot access the extender's web management page?

- If your computer is wirelessly connected, make sure that you have connected to the extender's SSID.
- If your computer is connected via an Ethernet cable, please make sure that the connection is stable.
- Make sure your computer is set to obtain an IP address and DNS server address automatically.
- Verify that <http://tplinkrepeater.net> or <http://192.168.0.254> is correctly entered in the web browser and press Enter.
- Reset the extender and try again.

If the problem persists, please refer to the FAQ at [www.tp-link.com](http://www.tp-link.com) for details.

Q2. How do I reset the extender?

- With the extender powered on, use a pin to press the Reset button. All the LEDs should turn on momentarily, and then release the button.

Q3. What should I do if the Signal LED  doesn't become solid blue after completing Option ONE?

- You may have entered incorrect Wi-Fi passwords for your host networks during the configuration. Please log in to the extender's web management page to check the password and try again.
- Reset the extender and go through the configuration again.

Q4. I have enabled a wireless MAC filter, wireless access control, or access control list (ACL) on my router. What should I do before configuring the extender?

- If you have enabled those features of your host router, you may need to disable them first, and then follow Option ONE or Option TWO to complete the configuration.

For details, please visit [www.tp-link.com](http://www.tp-link.com) and refer to the FAQ section in the extender's User Guide.
