

Deco: A True Whole Home Mesh WiFi Solution

Most homes nowadays seem to have a growing number of internet devices in every room. For this reason, it's high time families consider using Mesh WiFi. After all, when you need fast and reliable internet from anywhere in your home, Mesh is your answer. At TP-Link, we recognize the value of having whole home WiFi, which is why we've developed Deco.

With any Deco model, you receive a powerful and stable network no matter where you are at home. Maybe you like to lounge outside on the deck while watching your favorite Netflix show. Deco ensures you won't receive a weak signal outside thanks to a strategically placed node.

Of course, there might be a dozen of different scenarios like the one above where you need a special setup. Maybe you don't have good enough service providers around your area and need to rely on a mobile SIM network. Or maybe you're a fan of Ethernet connections but don't want to lay cable all over your home.

For all of these, you need something custom. With Deco's wide-range of offerings, you can find the perfect setup for your own whole home system.

1. Flexible Internet Access

No matter where your internet comes from, Deco offers a model that works for you. If you have DSL or 4G/5G, Deco X20-DSL, Deco X20-4G, or Deco X80-5G will get your Mesh network up and running.

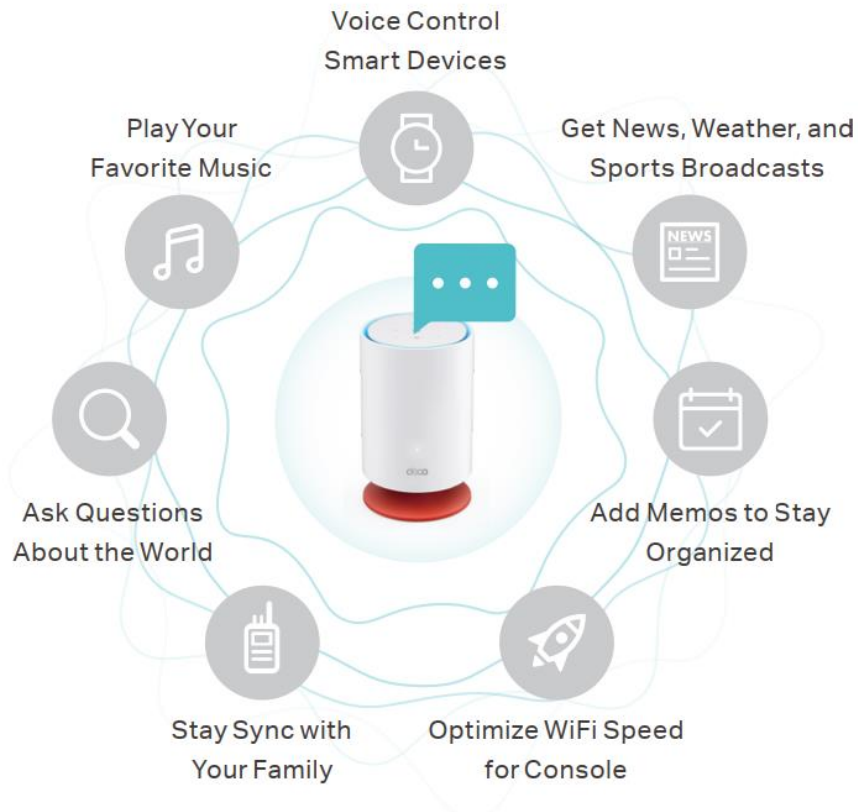

2. Multi-Scene Mount Options

Deco provides flexible installation methods for everything from tabletop to ceiling, wall, and even pole mounts. Pick what's best for you and your space.

For more flexibility, choose PoE. You won't have to worry about finding a power outlet, and won't be tripping over a jungle of disorganized cables. Some Decos even feature IP65 water & dust, allowing for outdoor applications.

3. Ideal Mesh Built for Smart Living

Deco units with a built-in Smart Hub like Deco Voice can connect and control all your smart home devices. Establish a unified home network all while conveniently controlling your smart devices. By pairing with Alexa, control your Decos with simple voice commands for even more convenience.

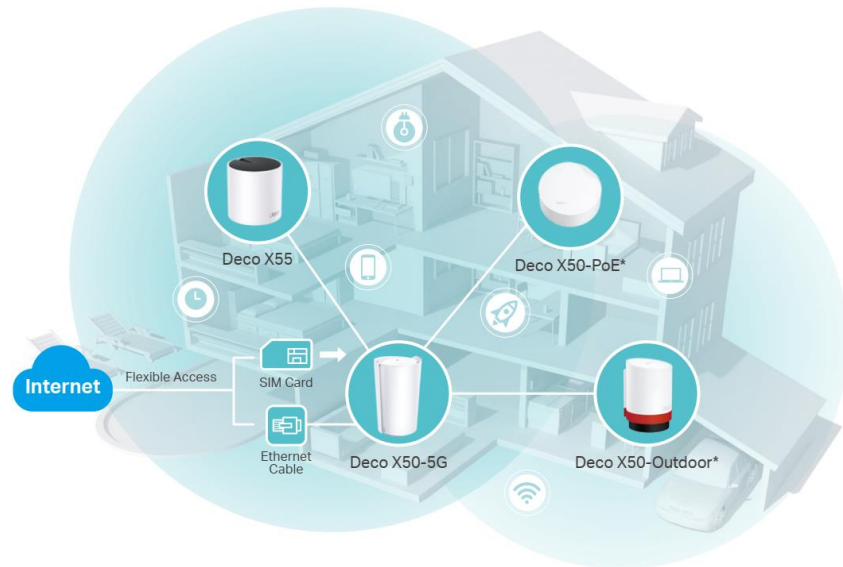

4. Mesh WiFi + Powerline

Combining WiFi and powerline enables Mesh WiFi that penetrates walls. Powerline technology uses your home's electrical wiring to create stronger connections, reducing the impact of walls and other obstacles on signals.

5. All Decos Work Together

With TP-Link Mesh Technology, Deco units work together to immerse your whole home in powerful WiFi no matter its size or shape. Want more coverage? Simply add another Deco.

*PoE available only when connected to a PoE switch
