How to Upgrade TP-LINK Wireless AC Access Point?

Notices for upgrading:

1. Please verify the firmware version is corresponded to your hardware version. **Wrong firmware upgrading may damage your device and void the warranty.**

   For how to check the hardware version of the device please refer to http://www.tp-link.com/en/article/?faqid=46 .

2. After you download the firmware from TP-LINK website, please use unzip tools such as WinZIP or WinRAR to extract the firmware file to a folder on your computer;

3. It's recommended to upgrade the firmware via Ethernet cable connection but not wireless connection;

4. Internet Explorer (IE) is recommended when upgrade the firmware;

5. Do NOT turn off the power or unplug the Ethernet cable during upgrade process.

**Steps for Upgrading:**

Step1

Connect your computer to the Ethernet port of the device by Ethernet cable.

Make sure your network card is set to DHCP.

Step2

1. Open a web browser (such as Internet Explorer, Firefox) and input
   192.168.0.254 or http://tplinkap.net into the address bar, then press **Enter**.

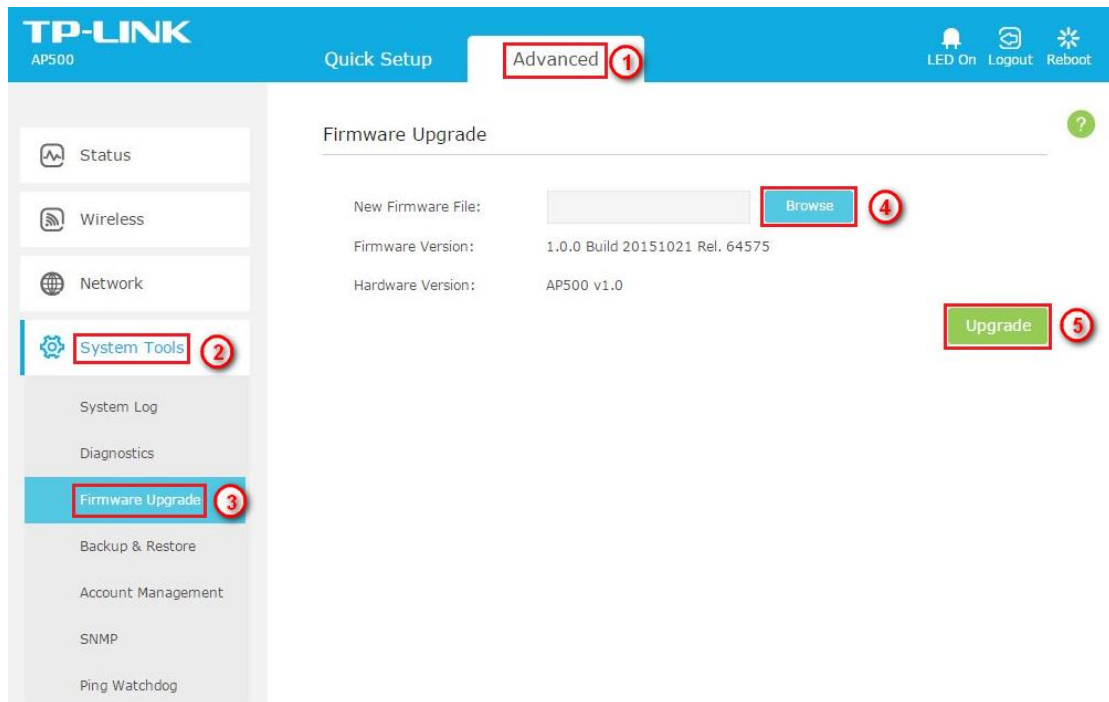

2. Type in the Username and Password (both **admin** by default) and click **Login.**

Step3

Go to **Advanced**->**System Tools**->**Firmware Upgrade**, click **Browse** button to choose the firmware file you have unzipped before and click **Upgrade.**

Notes:

The device will reboot automatically after upgrading successfully, please wait for 2~3 minutes.
