Installation

1. Turn off all of your network devices, including your computer and the Modem Router. If you currently use a modem, disconnect it now - the Modem Router will replace your current modem.

2. Connect your computer to the Port labeled “LAN” on the Modem Router with an Ethernet cable.

3. Connect the splitter to the wall jack using a telephone line, then use the other telephone line to directly connect it to the LINE port on the Modem Router and the MODEM port of the splitter, also have the PHONE port of the splitter connected to a telephone.

4. Plug the provided Power Adapter into the Power jack on the back of the Modem Router and the other end to a standard electrical wall socket.

Note: The product model shown in this QIG is TD-8817, as an example.
Turn on all of your network devices, including your computer and the Modem Router then check to see if the LEDs of the Modem Router display normally as the diagram below describes.

If the LEDs display abnormally, please check to see if all the cable connectors (power adapter, phone line and Ethernet cable) are well connected to your device. With the phone line well connected, if the ADSL LED turns off after a quick-flash, please contact your ISP to ensure that your internet connection is active.

Note
To configure the device, you can either run the setup CD-ROM (method one), or run the Web based Quick Setup Wizard (method two). TP-LINK strongly recommends that you run the setup CD-ROM.
Method One:
Configuring the Device via the Resource CD

1. Insert the provided Resource CD into your CD-ROM drive.

2. The Setup Wizard will automatically pop up on your computer’s screen.

   Please select your product model and click Start Setup

   Then a flash video will pop up and show you how to connect your devices. After that, the Easy Setup Assistant will start.

   Click NEXT, and then follow the step-by-step instructions
When it comes to **ISP Configuration**, you need to select your country and Internet service provider.

**Note** If your country or Internet service provider is not in the list, please select Other and manually configure the Internet settings.

After the configuration has been completed, please skip to **Step 3 “Testing the Internet Connection”**.

**Method Two:**

**Configuring the Device via the Web-based Quick Setup Wizard**

1. **Login**

   Open your web browser and type in **192.168.1.1** in the address bar and press Enter.

   A dialog box will prompt you for the User name and Password. Enter the default values and click OK.

   **User name:** admin  
   **Password:** admin

   Click OK
The web management page will display after a successful login.

Click **Quick Start**

2 **Internet Parameters Configuration**

This page will then display.

Click **RUN WIZARD**

Click **NEXT**

---

**Note** If the dialog box does not pop up, please refer to **T3** in the **Troubleshooting** guide. **T2** will help you if you forget the password.
Select the appropriate Time Zone for your location from the drop-down list.

Click NEXT

Choose the Connection Type given by your ISP.
If PPPoE/PPPoA is selected, please proceed to A;
If Dynamic IP is selected, please skip to B;
If Static IP is selected, please skip to C;
If Bridge Mode is selected, please skip to D.

Click NEXT

Note Bridge mode is not recommended because multiple computers are not permitted to share Internet access in this mode.

A. Configuration for PPPoE/PPPoA
This page will then display.

Enter the PPPoE/PPPoA information provided by your ISP

Click NEXT

Note If you did not get the VPI, VCI and Connection Type information, please contact your ISP for this information.
B. Configuration for Dynamic IP

This page will then display.

Select the Dynamic Connection provided by your ISP

Click NEXT

C. Configuration for Static IP

This page will then display.

Enter the Static IP information provided by your ISP manually

Click NEXT

D. Configuration for Bridge Mode

This page will then display.

Enter the Bridge information provided by your ISP

Click NEXT

After completing the above configuration, please proceed to Quick Start Complete.
Quick Start Complete

This page will then display.

Click NEXT

Click CLOSE

Now, your Modem Router has been configured and is rebooting. Please do not turn off the Modem Router while it’s rebooting.

Testing the Internet Connection

The basic settings for your Modem Router are completed. Please open the web browser and log on to the following websites:

http://www.tp-link.com
http://www.google.com

If the above websites can be accessed, it indicates that your Modem Router has been configured successfully and you can start to enjoy the Internet. If the websites cannot be accessed, please refer to “T4. What can I do if I cannot access the Internet?” in the Troubleshooting guide.

Note For the advanced configurations, please refer to the User Guide on the Resource CD provided.

Note The above configurations only need to be set once. If you want other computers in your LAN to access the Internet, please connect the desired computer to the Modem Router directly. If the additional computer can not access the Internet, please configure the computer’s IP address referring to “T3. What can I do if I cannot access the web-based configuration page?” in the Troubleshooting guide.
T1. How do I restore my Modem Router’s configuration to its factory default settings?

With the Router powered on, press and hold the **RESET** button on the rear panel for 5 seconds before releasing it.

**Note** Once the Router is reset, the current configuration settings will be lost and you will need to re-enter all the parameters.

T2. What can I do if I forget my password?
1) Restore the Modem Router’s configuration to its factory default settings. If you don’t know how to do that, please refer to section **T1**.
2) Use the default user name and password: **admin, admin**.
3) Try to configure your Modem Router once again by following the instructions in the previous steps of the QIG.

T3. What can I do if I cannot access the web-based configuration page?
1) Configure your computer’s IP Address.

For Windows XP OS

Go to **Start** > **Settings** > **Control Panel**, and then you will see the following page.

Click **Network and Internet Connections**
Click **Network Connections**

Right-click **Local Area Connection**

Click **Properties**

Double-click **Internet Protocol (TCP/IP)**
Select **Obtain an IP address automatically**

Select **Obtain DNS server address automatically**

Click **OK**

Click **OK**

Click **OK**
For Windows Vista OS

Go to Start > Settings > Control Panel, and then you will see the following page.

Click **View network status and tasks**

Click **View status**

Click **Properties**
Double-click **Internet Protocol Version 4 (TCP/IPv4)**

Select **Obtain an IP address automatically**

Select **Obtain DNS server address automatically**

Click **OK**
For Windows 7 OS

Go to Start > Settings > Control Panel, and then you will see the following page.

Click View network status and tasks

Click Change adapter settings

Right-click Local Area Connection

Click Properties
Double-click **Internet Protocol Version 4 (TCP/IPv4)**

Select **Obtain an IP address automatically**

Select **Obtain DNS server address automatically**

Click **OK**
2) Configure your IE browser

Open your IE browser, click **Tools** tab and you will see the following screen.

![Internet Options](image)

**Click Internet Options**

Select **Never dial a connection**

**Click OK**

Now, try to log on to the Web-based configuration page again after the above settings have been configured. If you still cannot access the configuration page, please restore your Modem Router’s factory default settings and reconfigure your Modem Router following the instructions of this QIG. Please feel free to contact our Technical Support if the problem exists.

**T4. What can I do if I cannot access the internet?**

1) Check to see if all the connectors are connected well, including the telephone line, Ethernet cables and power adapter.

2) Check to see if you can log on to the web management page of the Modem Router. If you can, try the following steps. If you cannot, please set your computer referring to **T3** then try to see if you can access the internet. If the problem exists, please go to the next step.
3) Consult your ISP and make sure all the VPI/VCI, Connection Type, account username and password are correct. If there are any mistakes, please correct the settings and try again.

4) If you still cannot access the Internet, please restore your Modem Router to its factory default settings and reconfigure your Modem Router by following the instructions of this QIG.

5) Please feel free to contact our Technical Support if the problem still exists.
