FCC STATEMENT

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1) This device may not cause harmful interference.
- 2) This device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

FCC RF Radiation Exposure Statement:

This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This device and its antenna must not be co-located or operating in conjunction with any other antenna or transmitter.

“To comply with FCC RF exposure compliance requirements, this grant is applicable to only Mobile Configurations. The antennas used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.”

CE Mark Warning

This is a class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

National Restrictions

This device is intended for home and office use in all EU countries (and other countries following the EU directive 1999/5/EC) without any limitation except for the countries mentioned below:

Country	Restriction	Reason/remark
Bulgaria	None	General authorization required for outdoor use and public service
France	Outdoor use limited to 10 mW e.i.r.p. within the band 2454-2483.5 MHz	Military Radiolocation use. Refarming of the 2.4 GHz band has been ongoing in recent years to allow current relaxed regulation. Full implementation planned 2012
Italy	None	If used outside of own premises, general authorization is required
Luxembourg	None	General authorization required for network and service supply(not for spectrum)
Norway	Implemented	This subsection does not apply for the geographical area within a radius of 20 km from the centre of Ny-Ålesund
Russian Federation	None	Only for indoor applications

5150-5250 MHz

Country	Restriction	Reason/remark
Bulgaria	Not implemented	Planned
Croatia	License required	
Italy		General authorization required if used outside own premises

Luxembourg	None	General authorization required for network and service supply (not for spectrum)
Russian Federation	No info	

5250-5350 MHz

Country	Restriction	Reason/remark
Bulgaria	Not implemented	Planned
Croatia	License required	
Italy		General authorization required if used outside own premises
Luxembourg	None	General authorization required for network and service supply (not for spectrum)
Russian Federation	No info	

5470-5725 MHz

Country	Restriction	Reason/remark
Bulgaria	Not implemented	Planned
France		Relevant+ provisions for the implementation of DFS mechanism described in ETSI standard EN 301 893 V1.3.1 and subsequent versions
Italy		General authorization required if used outside own premises
Luxembourg	None	General authorization required for network and service supply (not for spectrum)
Russian Federation	No info	
Turkey	Not implemented	Defence systems

Note: Please don't use the product outdoors in France.

Canadian Compliance Statement

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

- (1) This device may not cause interference, and
- (2) This device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil est conforme aux normes CNR exemptes de licence d'Industrie Canada. Le fonctionnement est soumis aux deux conditions suivantes:

- (1) cet appareil ne doit pas provoquer d'interférences et
- (2) cet appareil doit accepter toute interférence, y compris celles susceptibles de provoquer un fonctionnement non souhaité de l'appareil.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that permitted for successful communication.

Industry Canada Statement

Complies with the Canadian ICES-003 Class B specifications.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

This device complies with RSS 210 of Industry Canada. This Class B device meets all the requirements of the Canadian interference-causing equipment regulations.

Cet appareil numérique de la Classe B respecte toutes les exigences du Règlement sur le matériel brouilleur du Canada.

Korea Warning Statements

당해 무선설비는 운용중 전파혼신 가능성이 있음.

NCC Notice & BSMI Notice

注意！

依據 低功率電波輻射性電機管理辦法

第十二條 經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性或功能。

第十四條 低功率射頻電機之使用不得影響飛航安全及干擾合法通行；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。前項合法通信，指依電信規定作業之無線電信。低功率射頻電機需忍受合法通信或工業、科學以及醫療用電波輻射性電機設備之干擾。

減少電磁波影響，請妥適使用。

於 5.25GHz 至 5.35GHz 區域內操作之無線設備的警告聲明

工作頻率 5.250~5.350GHz 該頻段限於室內使用。

安全諮詢及注意事項

- 請使用原裝電源供應器或只能按照本產品注明的電源類型使用本產品。
- 清潔本產品之前請先拔掉電源線。請勿使用液體、噴霧清潔劑或濕布進行清潔。
- 注意防潮，請勿將水或其他液體潑灑到本產品上。
- 插槽與開口供通風使用，以確保本產品的操作可靠並防止過熱，請勿堵塞或覆蓋開口。
- 請勿將本產品置放於靠近熱源的地方。除非有正常的通風，否則不可放在密閉位置中。
- 請不要私自打開機殼，不要嘗試自行維修本產品，請由授權的專業人士進行此項工作。

Продукт сертифіковано згідно с правилами системи УкрСЕПРО на відповідність вимогам нормативних документів та вимогам, що передбачені чинними законодавчими актами України.

Safety Information

- When product has power button, the power button is one of the way to shut off the product; when there is no power button, the only way to completely shut off power is to disconnect the product or the power adapter from the power source.
- Don't disassemble the product, or make repairs yourself. You run the risk of electric shock and voiding the limited warranty. If you need service, please contact us.
- Avoid water and wet locations.

This product can be used in the following countries:

AT	BG	BY	CA	CZ	DE	DK	EE
ES	FI	FR	GB	GR	HU	IE	IT
LT	LV	MT	NL	NO	PL	PT	RO
RU	SE	SK	TR	UA	US		

DECLARATION OF CONFORMITY

For the following equipment:

Product Description: **AC1200 Wireless Dual Band Gigabit Router**

Model No.: **Archer C5**

Trademark: **TP-LINK**

We declare under our own responsibility that the above products satisfy all the technical regulations applicable to the product within the scope of Council Directives:

Directives 1999/5/EC, Directives 2004/108/EC, Directives 2006/95/EC, Directives 1999/519/EC, Directives 2011/65/EU

The above product is in conformity with the following standards or other normative documents

EN 300 328 V1.8.1

EN 301 489-1 V1.9.2 & EN 301 489-17 V2.2.1

EN 55022: 2010 + AC: 2011

EN 55024: 2010

EN 61000-3-2: 2006 + A1: 2009 + A2: 2009

EN 61000-3-3: 2013

EN 60950-1: 2006 + A11: 2009 + A1: 2010 + A12: 2011

EN 50385: 2002

EN 301 893 V1.7.1

The product carries the CE Mark:

Person responsible for making this declaration:

Yang Hongliang

Package Contents

The following items should be found in your package:

- Archer C5 AC1200 Wireless Dual Band Gigabit Router
- DC Power Adapter for Archer C5 AC1200 Wireless Dual Band Gigabit Router
- Ethernet Cable
- Quick Installation Guide
- Resource CD for Archer C5 AC1200 Wireless Dual Band Gigabit Router, including:
 - This Guide
 - Other Helpful Information

 **Note:**

Make sure that the package contains the above items. If any of the listed items are damaged or missing, please contact your distributor.

Chapter 1. Introduction

1.1 Overview of the router

The Archer C5 AC1200 Wireless Dual Band Gigabit Router integrates 4-port Switch, Firewall, NAT-router and Wireless AP. Powered by 2x2 MIMO technology, the AC1200 Wireless Dual Band Gigabit Router delivers exceptional range and speed, which can fully meet the need of Small Office/Home Office (SOHO) networks and the users demanding higher networking performance. Your wireless connections are radio band selectable to avoid interference in your area, and the four built-in Gigabit ports supply high-speed connection to your wired devices.

Incredible Speed

The Archer C5 AC1200 Wireless Dual Band Gigabit Router provides up to 1200Mbps wireless connection with other wireless clients. The incredible speed makes it ideal for handling multiple data streams at the same time, which ensures your network stable and smooth. The performance of this 802.11ac wireless router will give you the unexpected networking experience at speed much faster than 802.11n. It is also compatible with all IEEE 802.11n, IEEE 802.11a, IEEE 802.11b and IEEE 802.11g products.

Multiple Security Protections

With multiple protection measures, including SSID broadcast control and wireless LAN 64/128/152-bit WEP encryption, Wi-Fi Protected Access (WPA2- PSK, WPA- PSK), as well as advanced Firewall protections, the Archer C5 AC1200 Wireless Dual Band Gigabit Router provides complete data privacy.

Flexible Access Control

The Archer C5 AC1200 Wireless Dual Band Gigabit Router provides flexible access control, so that parents or network administrators can establish restricted access policies for children or staff. It also supports Virtual Server and DMZ host for Port Triggering, and then the network administrators can manage and monitor the network in real time with the remote management function.

Simple Installation

Since the router is compatible with virtually all the major operating systems, it is very easy to manage. Quick Setup Wizard is supported and detailed instructions are provided step by step in this user guide. Before installing the router, please look through this guide to know all the router's functions.

1.2 Conventions

The router or Archer C5 mentioned in this guide stands for Archer C5 AC1200 Wireless Dual Band Gigabit Router without any explanation.

1.3 Main Features

- Complies with IEEE 802.11ac.
- One 10/100/1000M Auto-Negotiation RJ45 Internet port, four 10/100/1000M Auto-Negotiation RJ45 Ethernet ports, supporting Auto MDI/MDIX.
- Provides two USB 2.0 ports supporting file sharing and print server.
- Provides WPA/WPA2, WPA-PSK/WPA2-PSK authentication, TKIP/AES encryption security.
- Shares data and Internet access for users, supporting Dynamic IP/Static IP/PPPoE/PPTP/L2TP Internet access.
- Supports simultaneous 2.4GHz and 5GHz connections for 1200Mbps of total available bandwidth.
- Supports Virtual Server, Special Application and DMZ host.
- Supports UPnP, Dynamic DNS, Static Routing.
- Provides Automatic-connection and Scheduled Connection on certain time to the Internet.
- Built-in NAT and DHCP server supporting static IP address distributing.
- Supports Parental Control and Access Control.
- Connects Internet on demand and disconnects from the Internet when idle for PPPoE.
- Provides WEP encryption security and wireless LAN ACL (Access Control List).
- Supports Flow Statistics.
- Supports IPv6.
- Supports firmware upgrade and Web management.

1.4 Panel Layout

1.4.1 The Front Panel

The router's LEDs are located on the front panel (View from left to right).

Name	Status	Indication
 (Power)	Flashing	The router is booting or upgrading.
	On	The router has booted.
	Off	Power is off.
 (2.4G Wireless)	On	2.4G wireless is working properly.
	Off	2.4G wireless is disabled.
 (5G Wireless)	On	5G wireless is working properly.
	Off	5G wireless is disabled.
 (Ethernet)	On	There is device(s) connected to the Ethernet (1/2/3/4) port(s).
	Off	No any device is connected to the Ethernet (1/2/3/4) port.
 (Internet)	Green	The Internet port is connected, and the Internet is accessible.
	Orange	The Internet port is connected, but the Internet is inaccessible.
	Off	The Internet port isn't connected, and the Internet is inaccessible.
 (WPS)	Flashing	WPS button on the router is pressed, and the router is trying to connect a wireless device to its network via WPS.
	On	The connection via WPS is successful.
	Off	The connection via WPS fails.
 (USB 1)	Flashing	The router is identifying the device connected to the USB 2.0 port.
	On	The device is identified successfully.
	Off	No device is connected to the USB 2.0 port.

 (USB 2)	Flashing	The router is identifying the device connected to the USB 2.0 port.
	On	The device is identified successfully.
	Off	No device is connected to the USB 2.0 port.

 **Note:**

After a device is successfully added to the network by WPS function, the WPS LED will keep on for about 5 minutes and then turn off.

1.4.2 The Rear Panel

Figure 1-1 Rear Panel sketch

The following parts are located on the rear panel (View from left to right).

- **Power:** The Power socket is where you will connect the power adapter. Please use the power adapter provided.
- **On/Off:** The switch for the power.
- **Wi-Fi on/off:** The button for the wireless function.
- **USB 1/2:** The USB 2.0 ports connects to a USB 2.0 storage device or a USB 2.0 printer.
- **Internet:** This port is where you will connect the DSL/cable Modem, or Ethernet.
- **Ethernet (1, 2, 3, 4):** These ports (1, 2, 3, 4) connect the router to the local PC(s).
- **WPS/Reset:**

Pressing this button for less than 5 seconds enables the WPS function. If your client devices, such as wireless adapters, that support Wi-Fi Protected Setup, then you can press this button to quickly establish a connection between the router and client devices and automatically configure wireless security for your wireless network.

Pressing this button for more than 5 seconds enables the Reset function. With the router powered on, press and hold the **WPS/Reset** button for approximately 8 seconds. And then release the button and wait the router to reboot to its factory default settings.

Chapter 2. Connecting the router

2.1 System Requirements

- Broadband Internet Access Service (DSL/Cable/Ethernet)
- One DSL/Cable Modem that has an RJ45 connector (which is not necessary if the router is connected directly to the Ethernet)
- PCs with a working Ethernet Adapter and an Ethernet cable with RJ45 connectors
- TCP/IP protocol on each PC
- Web browser, such as Microsoft Internet Explorer, Mozilla Firefox or Apple Safari

2.2 Installation Environment Requirements

- Place the router in a well-ventilated place far from any heater or heating vent
- Avoid direct irradiation of any strong light (such as sunlight)
- Keep at least 2 inches (5 cm) of clear space around the router
- Operating Temperature: 0°C~40°C (32°F~104°F)
- Operating Humidity: 10%~90%RH, Non-condensing

2.3 Connecting the router

Before installing the router, make sure your PC is connected to the Internet through the broadband service successfully. If there is any problem, please contact your ISP. After that, please install the router according to the following steps. Don't forget to pull out the power plug and keep your hands dry.

1. Power off your modem and disconnect your existing router if you have one. (If the modem has a backup battery, please remove it too.)
2. Use an Ethernet cable to connect the **Internet** (blue) port of the router to the modem's **LAN** port.
3. Use another Ethernet cable to connect your computer to one of the **Ethernet** ports (yellow) labeled 1/2/3/4 on your router.
4. Turn on your modem and wait for 2 minutes. (Replace the battery if you removed it previously.)
5. Plug the supplied power adapter into the **Power** jack, and then press the **On/Off** button to turn on the router and wait for 1 minute.

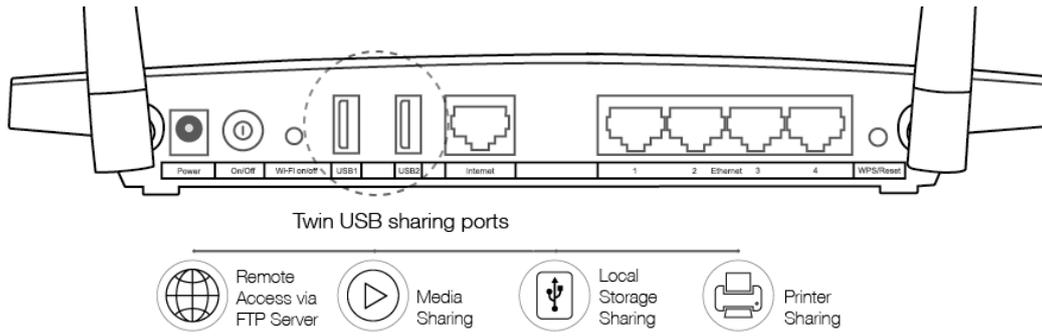

Figure 2-3 USB Installation

Note:

If you want to use the router to share files or printer, plug the USB storage device(s) to the USB port(s) or connect the printer to the router with a matching cable.

Chapter 3. Quick Setup

1. Set up the TCP/IP Protocol in "**Obtain an IP address automatically**" mode on your PC. If you need instructions as to how to do this, please refer to [Appendix B: Configuring the PC](#).
2. Open a web-browser (such as Microsoft Internet Explorer, Mozilla Firefox or Apple Safari), and type in the default IP address <http://tplinkwifi.net> in the address field.

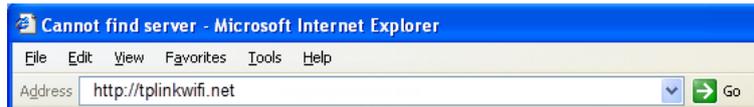

Figure 3-1 Log in the router

After a moment, a login window will appear. Enter **admin** for the User Name and Password, both in lower case letters. Then click the **Login** button or press the **Enter** key.

Figure 3-2 Login Windows

Note:

If the above screen does not pop up, it means that your Web-browser has been set to a proxy. Go to Tools menu>Internet Options>Connections>LAN Settings, in the screen that appears, cancel the Using Proxy checkbox, and click OK to finish it.

3. After successful login, the **Quick Setup** page will appear for you to select your **Region** and **Time zone**. After finishing the selection, click **Next**.

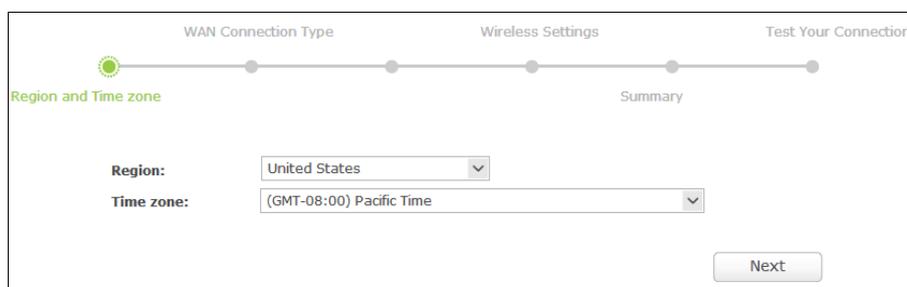

Figure 3-3 Quick Setup

Note:

Per FCC regulations, all Wi-Fi products marketed in the U.S. must be fixed to the U.S. region only.

- Then **WAN Connection Type** page will appear as shown below. Select your connection type if you know what it is or click **Auto Detect** button; then follow the instructions to continue.

Note:

- It's likely that you will skip Step 3 and jump to Step 4 in some situations, which is normal.
- Make sure the cable is securely plugged into the Internet port before using **Auto-Detect**.
- Auto-Detect** supports only three popular connection types, PPPoE, Dynamic IP, and Static IP. If your connection type is L2TP or PPTP, you need to manually select the very type and click **Next** to go on configuring.

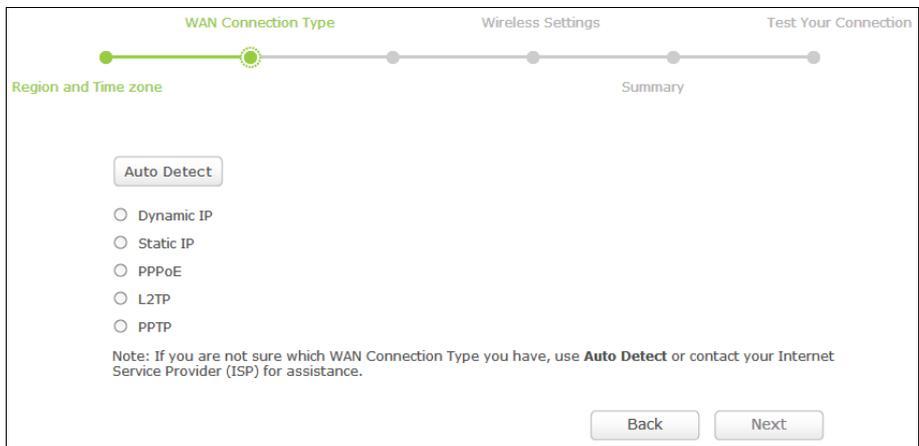

Figure 3-4 WAN Connection Type

Dynamic IP

Choose to clone MAC address or not and then click **Next** to continue.

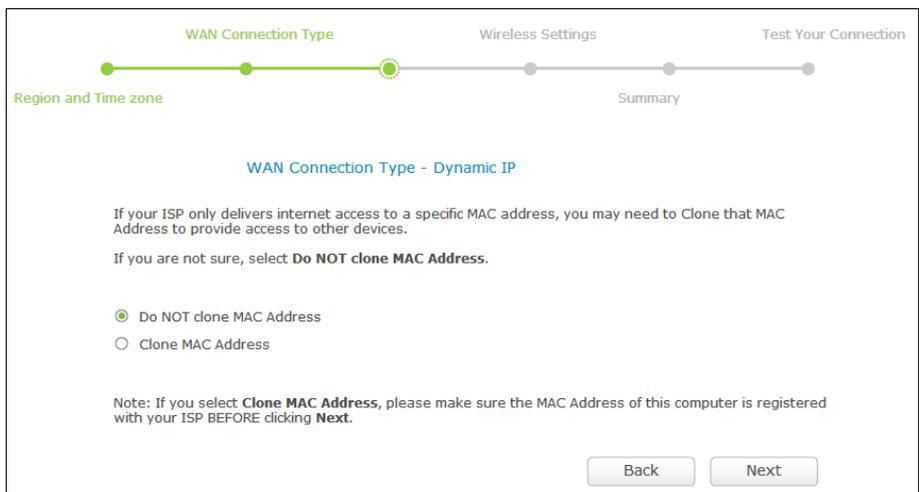

Figure 3-5 WAN Connection Type –Dynamic IP

Static IP

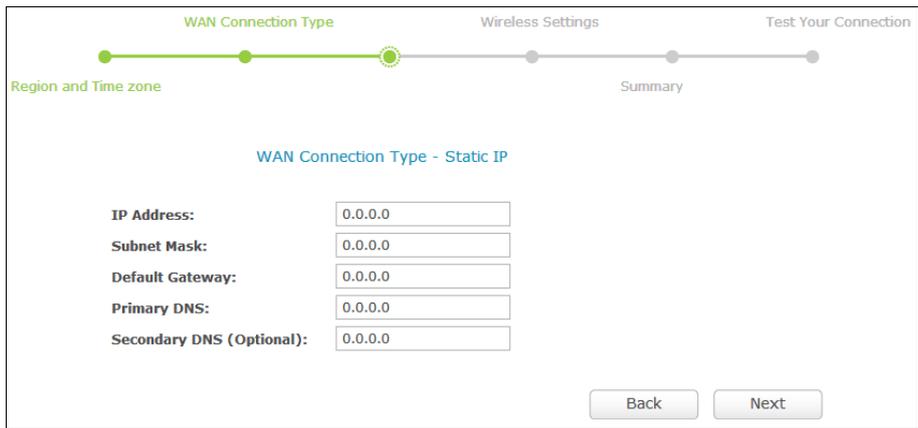

Figure 3-6 WAN Connection Type – Static IP

- **IP Address** - Enter the IP address into this field.
- **Subnet Mask** - Enter the subnet mask into this field. It is usually 255.255.255.0.
- **Default Gateway** - Enter the gateway IP address into this field.
- **Primary DNS** - Enter the DNS Server IP address into this field.
- **Secondary DNS (Optional)** - If your ISP provides another DNS server IP address, enter it into this field.

PPPoE/Russian PPPoE

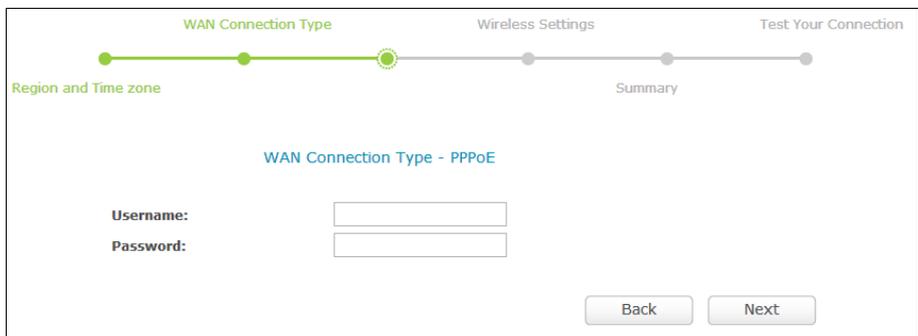

Figure 3-7 WAN Connection Type - PPPoE

- **Username** - Enter the username provided by your ISP. This field is case-sensitive.
- **Password** - Enter the password provided by your ISP. This field is case-sensitive.

- **VPN Server IP/Domain Name** - Enter the server IP address/name provided by your ISP.
 - **Username** - Enter the username provided by your ISP. This field is case-sensitive.
 - **Password** - Enter the Password provided by your ISP. This field is case-sensitive.
 - **Dynamic IP/Static IP** - Select Static IP if the IP Address, Subnet Mask, Default Gateway, and Primary DNS server address have been provided by your ISP. Otherwise, please select Dynamic IP.
 - **IP Address** - Enter the IP address provided by your ISP.
 - **Subnet Mask** - Enter the subnet mask provided by your ISP.
 - **Default Gateway-** Enter the default gateway provided by your ISP.
 - **Primary DNS** - Enter the primary DNS provided by your ISP.
5. After finishing WAN Connection Type selection, you need to configure the basic parameters for your wireless network, including 2.4GHz and 5GHz, and then click **Next**.

Figure 3-10 Wireless Settings

- **Wireless 2.4GHz/5GHz** - Displays whether the wireless function is enabled or not.
 - **Network Name (SSID)** - Also called the SSID (Service Set Identification). Enter a value of up to 32 characters. The same name must be assigned to all wireless devices in your network. This value is case-sensitive. For example, *TEST* is NOT the same as *test*.
 - **Password** - Create a password for your 2.4GHz and 5GHz wireless network.
6. On the Summary page, verify your settings. If anything wrong, click **Back** to change it; if nothing wrong, click **Save** to continue.

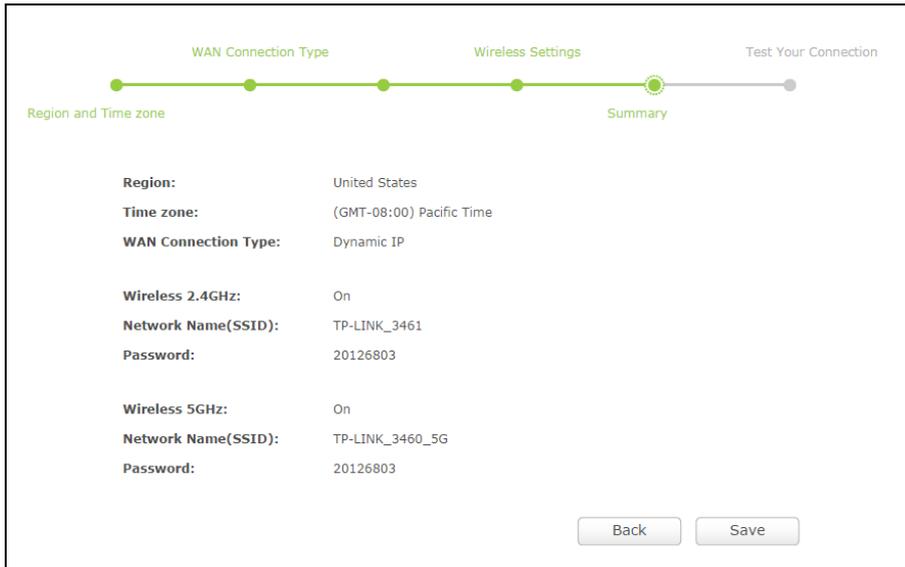

Figure 3-11 Summary

7. Congratulations! You have completed the Quick Setup process. You can click **Test Internet Connection**, and then click **Finish** to exit.

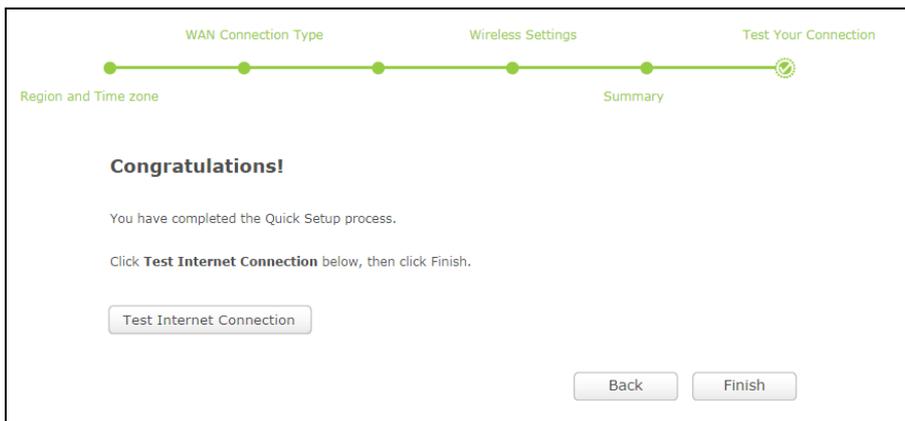

Figure 3-12 Finish

Chapter 4. Basic

4.1 Network Map

Network Map provides a router-centered dashboard that lets you see the status of your Internet connection and network at a glance. You can click any of the six sections of the dashboard to view the detail information. All the information is read-only.

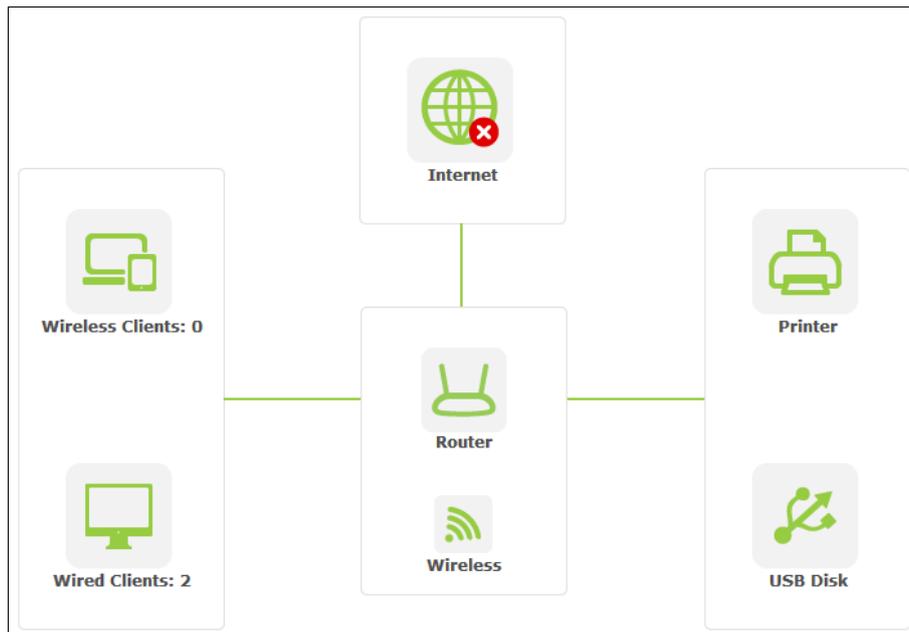

Figure 4-1 Network Map

- **Internet** - Click to view the ISP settings of your router.
- **Wireless Clients** - Click to view the wireless devices connected to your network.
- **Wired Clients** - Click to view the wired devices connected to your network.
- **Wireless** - Click to view or change the wireless settings for your router.
- **Printer** - Click to view the information of the printer connected to your network.
- **USB Disk** - Click to view the information of the USB storage device connected to your network.

4.2 Internet

Choose menu “**Basic**→**Internet**”, and you can view or change the basic ISP information for your router.

The screenshot shows the 'Internet' configuration page. At the top, the title 'Internet' is in blue. Below it, the 'WAN Connection Type' is set to 'Dynamic IP' in a dropdown menu, with a 'Detect' button to its right. Underneath, the 'IP Address:', 'Subnet Mask:', and 'Default Gateway:' fields are all set to '0.0.0.0'. There are 'Renew' and 'Release' buttons below these fields. A checkbox labeled 'Use These DNS Servers' is unchecked. Below that, the 'Primary DNS:' field is set to '0.0.0.0' and the 'Secondary DNS:' field is also set to '0.0.0.0' with '(Optional)' text to its right. A 'Save' button is located at the bottom right of the form.

Figure 4-2 Internet

1. If your ISP provides the DHCP service, please choose **Dynamic IP** type, and the router will automatically get IP parameters from your ISP. You can see the page as shown below.

This screenshot is identical to Figure 4-2, showing the 'Internet' configuration page with 'WAN Connection Type' set to 'Dynamic IP' and IP parameters (IP Address, Subnet Mask, Default Gateway) all set to '0.0.0.0'. It also shows the 'Renew' and 'Release' buttons, the 'Use These DNS Servers' checkbox, and the 'Primary' and 'Secondary' DNS fields.

Figure 4-3 Dynamic IP

- **IP Address** - Assigned dynamically by your ISP.
- **Subnet Mask** - Assigned dynamically by your ISP.
- **Default Gateway** - Assigned dynamically by your ISP.

Click the **Renew** button to renew the IP parameters from your ISP. Click the **Release** button to release the IP parameters.

- **Primary/Secondary DNS** - If your ISP gives you one or two DNS addresses, select **Use These DNS Servers** and enter the primary and secondary addresses into the correct fields. Otherwise, the DNS servers will be assigned dynamically from your ISP.

Note:

If you find error when you go to a website after entering the DNS addresses, it is likely that your DNS servers are set up improperly. You should contact your ISP to get DNS server addresses.

Click the **Save** button to save your settings.

2. If your ISP provides a static or fixed IP Address, Subnet Mask, Gateway and DNS setting, select **Static IP**. The Static IP settings page will appear as shown below.

The screenshot shows the 'Internet' settings page. At the top, 'WAN Connection Type' is set to 'Static IP' with a 'Detect' button next to it. Below this are input fields for 'IP Address', 'Subnet Mask', 'Default Gateway', 'Primary DNS', and 'Secondary DNS'. All these fields contain the placeholder value '0.0.0.0'. The 'Secondary DNS' field is marked as '(Optional)'. A 'Save' button is located at the bottom right of the form.

Figure 4-4 Static IP

- **IP Address** - Enter the IP address in dotted-decimal notation provided by your ISP.
- **Subnet Mask** - Enter the subnet Mask in dotted-decimal notation provided by your ISP, usually is 255.255.255.0.
- **Default Gateway** - Enter the gateway IP address in dotted-decimal notation provided by your ISP.
- **Primary/Secondary DNS** - Enter one or two DNS addresses in dotted-decimal notation provided by your ISP.

Click the **Save** button to save your settings.

3. If your ISP provides a PPPoE connection, select **PPPoE/Russia PPPoE** option. And you should enter the following parameters in the screen below.

Figure 4-5 PPPoE

- **User Name/Password** - Enter the User Name and Password provided by your ISP. These fields are case-sensitive. Click the **Connect** button to connect immediately. Click the **Disconnect** button to disconnect immediately.

Click the **Save** button to save your settings.

4. If your ISP provides L2TP connection, please select **L2TP/Russia L2TP** option. And you should enter the following parameters in the screen below.

Figure 4-6 L2TP/Russia L2TP

- **VPN Server IP/Domain Name** - Enter the IP address or domain name of your VPN server.
- **User Name/Password** - Enter the User Name and Password provided by your ISP. These fields are case-sensitive.
- **Dynamic IP/Static IP** - Choose either as you are given by your ISP. Click the **Connect** button to connect immediately. Click the **Disconnect** button to disconnect immediately.

Click the **Save** button to save your settings.

5. If your ISP provides PPTP connection, please select **PPTP/Russia PPTP** option. And you should enter the following parameters (Figure 4-7).

The screenshot shows the 'Internet' configuration page. At the top, the title 'Internet' is in blue. Below it, the 'WAN Connection Type' is set to 'PPTP/Russia PPTP' in a dropdown menu, with a 'Detect' button to its right. Below this are four input fields: 'VPN Server IP/Domain Name', 'User Name', 'Password', and 'Confirm Password'. Under these fields are two radio buttons: 'Dynamic IP' (which is selected) and 'Static IP'. At the bottom of the form are three buttons: 'Connect', 'Disconnect', and 'Save'. To the right of the 'Disconnect' button, the text 'Disconnected!' is displayed in blue.

Figure 4-7 PPTP/Russia PPTP

- **VPN Server IP/Domain Name** - Enter the IP address or domain name of your VPN server.
- **User Name/Password** - Enter the User Name and Password provided by your ISP. These fields are case-sensitive.
- **Dynamic IP/ Static IP** - Choose either as you are given by your ISP and enter the ISP's IP address or the domain name. If you choose static IP and enter the domain name, you should also enter the DNS assigned by your ISP. And click the **Save** button. Click the **Connect** button to connect immediately. Click the **Disconnect** button to disconnect immediately.

Click the **Save** button to save your settings.

Note:

If you don't know how to choose the appropriate connection type, click the **Detect** button to allow the router to automatically search your Internet connection for servers and protocols. The connection type will be reported when an active Internet service is successfully detected by the router. This report is for your reference only. To make sure the connection type your ISP provides, please refer to the ISP. The various types of Internet connections that the router can detect are as follows:

- **PPPoE** - Connections which use PPPoE that requires a user name and password.
- **Dynamic IP** - Connections which use dynamic IP address assignment.
- **Static IP** - Connections which use static IP address assignment.

The router cannot detect PPTP and L2TP connections with your ISP. If your ISP uses one of these protocols, then you must configure your connection manually.

4.3 Wireless

Choosing menu “**Basic→Wireless**”, you can configure the basic settings for the wireless network including 2.4GHz and 5GHz.

The screenshot shows the 'Wireless Setting' interface. It is divided into two main sections: 'Wireless 2.4GHz' and 'Wireless 5GHz'. Each section has a toggle switch for 'ON' or 'OFF'. Below each toggle are three input fields: 'Network Name (SSID)', a 'Hide SSID' checkbox, and 'Password'. The 2.4GHz section has 'ON' selected, SSID 'TP-LINK_7AFF', and password '12345670'. The 5GHz section has 'ON' selected, SSID 'TP-LINK_7AFE_5G', and password '12345670'. A 'Save' button is located at the bottom right of the form.

Figure 4-8 Wireless Setting

- **Wireless 2.4GHz/5GHz** - Select **ON** to enable your wireless 2.4GHz/5GHz network, and select **OFF** to disable your wireless 2.4GHz/5GHz network.
- **Network Name (SSID)** - Create a name (up to 32 characters) for your wireless 2.4GHz/5GHz network. If the **Hide SSID** checkbox is selected, the SSID of your wireless network will be hidden from the Wi-Fi network.
- **Password** - Create a password for your wireless network. The password must have a minimum of 8 characters in length.

Click the **Save** button to save your settings.

4.4 USB Settings

4.4.1 File Sharing

Choose menu “**Basic→USB Settings→File Sharing**”, you can configure the sharing settings.

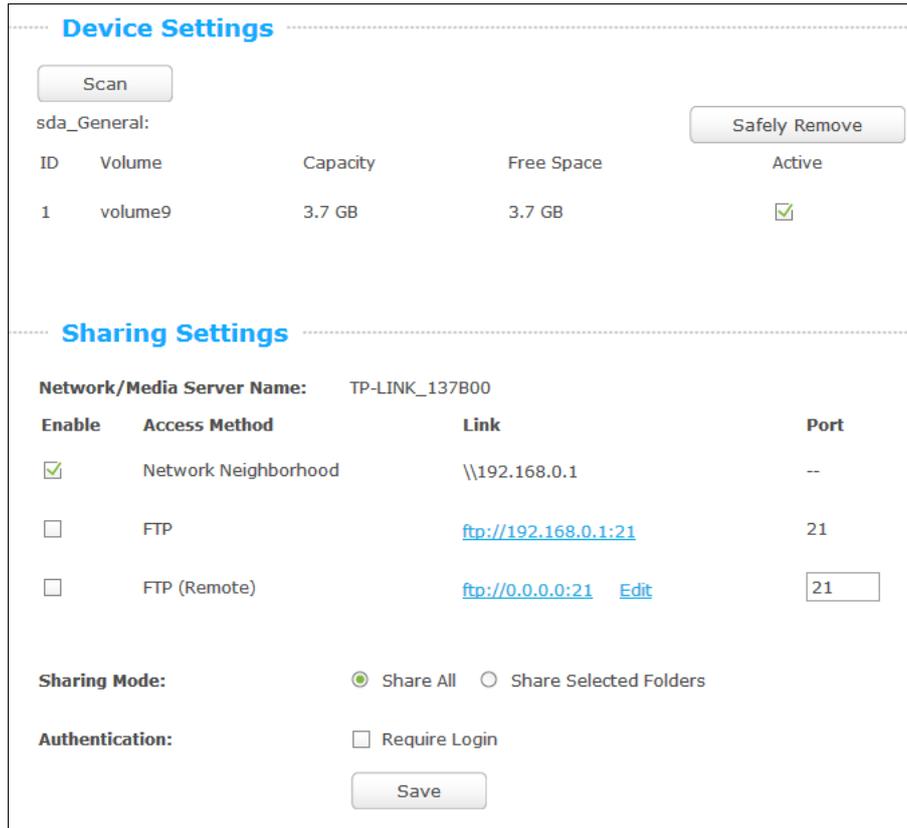

Figure 4-9 File Sharing

- **Device Setting** - Click the **Scan** button to display the information of the USB storage device connected to the router. Click the **Safely Remove** button to remove the USB storage device safely from the router. Select the **Active** checkbox, and then the corresponding USB storage device is active.
- **Sharing Settings**
 - **Network/Media Server Name** - Show the name of the network/media server. This is the name used to access the USB device connected to the router.
 - **Access Method** - Select the check boxes for the access methods that you want.
 - 1) **Network Neighborhood:** This method is enabled by default. To access the USB device for example from a Windows computer:
 - i. Select **Start > Run**.
 - ii. Enter [\\192.168.0.1](http://192.168.0.1) in the dialog box and click the **OK** button.
 - 2) **FTP:** This method is disabled by default. If you select this check box and click the **Save** button, the LAN users can access the USB device through FTP. To access the USB device for example from a Windows computer:
 - i. Select **Start > Run**.

- ii. Enter <ftp://192.168.0.1:21> in the dialog box and click the **OK** button.
- 3) **FTP (Remote):** This method is disabled by default. If you select this check box, remote users can access the USB device through FTP over the Internet. This feature supports both downloading and uploading of files. To change the FPT (Remote) port, modify the port and then click the **Save** button. To access the USB device for example from a Windows computer:
- i. Select **Start > Run**.
 - ii. Enter <ftp://WAN IP:port> in the dialog box and click the **OK** button.

 **Note:**

If the port for FTP (Remote) is changed, the port for FTP will be changed to the same port.

● **Sharing Mode**

- 1) If **Share All** is selected, all the folders in the USB device will be shared. Besides **Authentication** will appear for you to choose or not.
- 2) If **Share Selected Folders** is selected, only the folders you specified will be shared. You have to click the **Create Share Folder** appeared to specify folders allowed to be shared in the next screen.

Add or Modify Share Folder

Volume Name:

Folder Path: /

Share Name:

Allow Guest Network Access

Enable Authentication

Enable Write Access

Enable Media Sharing

Folder

Documents

Movies

Musics

Current No. Page

Figure 4-10 Add or Modify Share Folder

- **Allow Guest Network Access** - If this checkbox is selected, guests are allowed to access the sharing file.
- **Enable Authentication** - If this checkbox is selected, then the file sharing is need authentication.
- **Enable Write Access** - If this checkbox is selected, then the sharing file is allowed write access.
- **Enable Media Sharing** - Select this checkbox to enable media sharing.

To specify the folders:

- i. Select the volume desired to share from the Volume Name drop-down list.
- ii. Create a share name, e.g. Movie.
- iii. Select the checkboxes according to your needs.
- iv. Select the folder allowed to be shared, e.g. Movies.
- v. Click the **Save** button.

4.4.2 Print Server

Choose menu “**Basic→USB Settings→Print Server**”, you can enable or disable the print server.

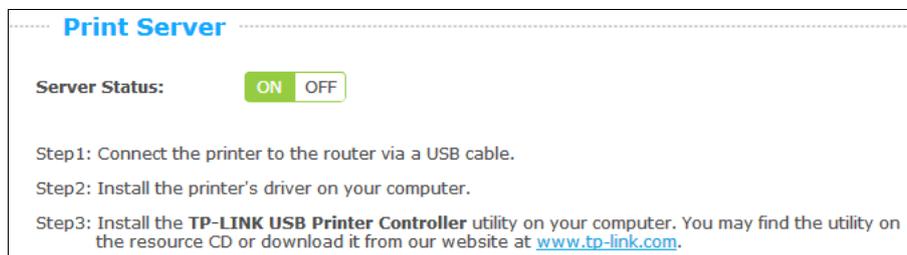

Figure 4-11 Print Server

4.5 Guest Network

Choose menu “**Basic→Guest Network**”, you can configure a wireless network for the guest, including 2.4GHz and 5GHz.

Guest Network

Allow Guests To See Each Other ON OFF

Allow Guests To Access My Local Network ON OFF

Wireless 2.4GHz: ON OFF

Network Name(SSID):

Password:

The Security Mode is disabled currently, if you configure the password, the Security Mode will be set to the strongest type automatically.

Wireless 5GHz: ON OFF

Network Name(SSID):

Password:

The Security Mode is disabled currently, if you configure the password, the Security Mode will be set to the strongest type automatically.

Figure 4-12 Guest Network

- **Allow Guests To See Each Other** - If **ON** is selected, anyone who connects to the guest network can access each other.
- **Allow Guests To Access My Local Network** - If **ON** is selected, anyone who connects to the guest network has access to your local network, not just Internet access.
- **Wireless 2.4GHz/5GHz** - Select **ON** to enable guest wireless 2.4GHz/5GHz network, and select **OFF** to disable guest wireless 2.4GHz/5GHz network.
- **Network Name(SSID)** - create a value of up to 32 characters. The same Name(SSID) must be assigned to all wireless devices in your guest network.
- **Password** - Create a password for the guest network. The password must have a minimum of 8 characters in length.

Chapter 5. Advanced

5.1 Status

Choose menu “**Advanced**→**Status**”, you can see the current status information about the router.

Status		
Firmware Version:	3.16.0 Build 140826 Rel.72372n	
Hardware Version:	Archer C5 v2 00000000	
LAN		
MAC Address:	00-88-AB-44-34-62	
IP Address:	192.168.0.1	
Subnet Mask:	255.255.255.0

Figure 5-1 Status

5.2 Network

Figure 5-2 the Network menu

There are three submenus under the Network menu as shown in Figure 5-2: **WAN**, **MAC Clone**, and **LAN**. Click any of them, and you will be able to configure the corresponding function.

5.2.1 WAN

Choose menu “**Advanced**→**Network**→**WAN**”, you can configure the IP parameters of the WAN on the screen below.

1. If your ISP provides the DHCP service, please choose **Dynamic IP** type, and the router will automatically get IP parameters from your ISP. You can see the page, shown in Figure 5-3.

 A screenshot of the WAN configuration page. The page has a blue header with the word 'WAN'. Below the header, there are several configuration fields:

- WAN Connection Type:** A dropdown menu set to 'Dynamic IP' and a 'Detect' button.
- IP Address:** 0.0.0.0
- Subnet Mask:** 0.0.0.0
- Default Gateway:** 0.0.0.0
- Below the gateway field are 'Renew' and 'Release' buttons.
- MTU Size (in bytes):** A text box containing '1500' with a note: '(The default is 1500, do not change unless necessary.)'
- Use These DNS Servers
- Primary DNS:** A text box containing '0.0.0.0'
- Secondary DNS:** A text box containing '0.0.0.0' with '(Optional)' next to it.
- Host Name:** A text box containing 'Archer_C5'
- Get IP with Unicast DHCP (It is usually not required.)
- At the bottom of the form is a 'Save' button.

Figure 5-3 WAN – Dynamic IP

This page displays the WAN IP parameters assigned dynamically by your ISP, including IP address, Subnet Mask, Default Gateway, etc. Click the **Renew** button to renew the IP parameters from your ISP. Click the **Release** button to release the IP parameters.

- **MTU Size** - The normal **MTU** (Maximum Transmission Unit) value for most Ethernet networks is 1500 Bytes. It is not recommended that you change the default **MTU Size** unless required by your ISP.
- **Use These DNS Servers** - If your ISP gives you one or two DNS addresses, select **Use These DNS Servers** and enter the primary and secondary addresses into the correct fields. Otherwise, the DNS servers will be assigned dynamically from your ISP.

Note:

If you find error when you go to a website after entering the DNS addresses, it is likely that your DNS servers are set up improperly. You should contact your ISP to get DNS server addresses.

- **Host Name** - This option specifies the Host Name of the router.
- **Get IP with Unicast DHCP** - A few ISPs' DHCP servers do not support the broadcast applications. If you cannot get the IP Address normally, you can choose this option. (It is rarely required.)

Click the **Save** button to save your settings.

2. If your ISP provides a static or fixed IP Address, Subnet Mask, Gateway and DNS setting, select **Static IP**. The Static IP settings page will appear, shown in Figure 5-4.

Figure 5-4 WAN - Static IP

- **IP Address** - Enter the IP address in dotted-decimal notation provided by your ISP.
- **Subnet Mask** - Enter the subnet Mask in dotted-decimal notation provided by your ISP, usually is 255.255.255.0.
- **Default Gateway** - Enter the gateway IP address in dotted-decimal notation provided by your ISP.

- **MTU Size** - The normal **MTU** (Maximum Transmission Unit) value for most Ethernet networks is 1500 Bytes. It is not recommended that you change the default **MTU Size** unless required by your ISP.
- **Primary/Secondary DNS** - (Optional) Enter one or two DNS addresses in dotted-decimal notation provided by your ISP.

Click the **Save** button to save your settings.

3. If your ISP provides a PPPoE connection, select **PPPoE/Russia PPPoE** option. And you should enter the following parameters (Figure 5-5).

The screenshot shows the WAN configuration interface. At the top, there is a blue header with the text 'WAN'. Below this, the 'WAN Connection Type' is set to 'PPPoE/Russia PPPoE' with a dropdown menu and a 'Detect' button. Under 'PPPoE Connection', there are three input fields for 'User Name:', 'Password:', and 'Confirm Password:'. The 'Secondary Connection' section has three radio buttons: 'Disabled' (selected), 'Dynamic IP', and 'Static IP', with a note '(For Dual Access/Russia PPPoE)'. The 'Wan Connection Mode' section has four radio buttons: 'Connect on Demand' (with a 'Max Idle Time' of 15 minutes), 'Connect Automatically' (selected), 'Time-based Connecting' (with a 'Period of Time' from 0:00 to 23:59), and 'Connect Manually' (with a 'Max Idle Time' of 15 minutes). At the bottom of the form, there are 'Connect' and 'Disconnect' buttons, with 'Disconnected!' text next to the 'Disconnect' button. At the very bottom, there are 'Save' and 'Advanced' buttons.

Figure 5-5 WAN - PPPoE

- **User Name/Password** - Enter the User Name and Password provided by your ISP. These fields are case-sensitive.
- **Secondary Connection** - It's available only for PPPoE Connection. If your ISP provides an extra Connection type such as Dynamic/Static IP to connect to a local area network, then you can check the radio button of Dynamic/Static IP to activate this secondary connection.
 - **Disabled** - The Secondary Connection is disabled by default, so there is PPPoE connection only. This is recommended.
 - **Dynamic IP** - You can check this radio button to use Dynamic IP as the secondary connection to connect to the local area network provided by ISP.

- **Static IP** - You can check this radio button to use Static IP as the secondary connection to connect to the local area network provided by ISP.
- **Connect on Demand** - In this mode, the Internet connection can be terminated automatically after a specified inactivity period (**Max Idle Time**) and be re-established when you attempt to access the Internet again. If you want your Internet connection keeps active all the time, please enter "0" in the **Max Idle Time** field. Otherwise, enter the number of minutes you want to have elapsed before your Internet access disconnects.
- **Connect Automatically** - The connection can be re-established automatically when it was down.
- **Time-based Connecting** - The connection will only be established in the period from the start time to the end time (both are in HH:MM format).

 **Note:**

Only when you have configured the system time on "**Advanced**→**System Tools**→**Time Settings**" page, will the **Time-based Connecting** function can take effect.

- **Connect Manually** - You can click the **Connect/Disconnect** button to connect/disconnect immediately. This mode also supports the **Max Idle Time** function as **Connect on Demand** mode. The Internet connection can be disconnected automatically after a specified inactivity period.

Click the **Connect** button to connect immediately. Click the **Disconnect** button to disconnect immediately.

Caution: Sometimes the connection cannot be terminated although you specify a time to Max Idle Time because some applications are visiting the Internet continually in the background.

If you want to do some advanced configurations, please click the **Advanced** button, and the page shown in Figure 5-6 will then appear.

Figure 5-6 PPPoE Advanced Settings

- **MTU Size** - The default MTU size is “1480” bytes, which is usually fine. It is not recommended that you change the default **MTU Size** unless required by your ISP.
- **Service Name/AC Name** - The service name and AC (Access Concentrator) name should not be configured unless you are sure it is necessary for your ISP. In most cases, leaving these fields blank will work.
- **ISP Specified IP Address** - If your ISP does not automatically assign IP addresses to the router during login, please click “**Use IP address specified by ISP**” check box and enter the IP address provided by your ISP in dotted-decimal notation.
- **Detect Online Interval** - The router will detect Access Concentrator online at every interval. The default value is “0”. You can input the value between “0” and “120”. The value “0” means no detect.
- **Primary DNS/Secondary DNS** - If your ISP does not automatically assign DNS addresses to the router during login, please click “**Use the following DNS servers**” check box and enter the IP address in dotted-decimal notation of your ISP’s primary DNS server. If a secondary DNS server address is available, enter it as well.

Click the **Save** button to save your settings.

4. If your ISP provides L2TP connection, please select **L2TP/Russia L2TP** option. And you should enter the following parameters (Figure 5-7).

WAN

WAN Connection Type: L2TP/Russia L2TP

VPN Server IP/Domain Name:

User Name:

Password:

Confirm Password:

Disconnected!

Dynamic IP Static IP

IP Address: 0.0.0.0

Subnet Mask: 0.0.0.0

Gateway: 0.0.0.0

DNS: 0.0.0.0 , 0.0.0.0

Internet IP Address: 0.0.0.0

Internet DNS: 0.0.0.0 , 0.0.0.0

MTU Size (in bytes): (The default is 1460, do not change unless necessary.)

Max Idle Time: minutes (0 means remain active at all times.)

Connection Mode:

Connect on Demand

Connect Automatically

Connect Manually

Figure 5-7 WAN - L2TP/Russia L2TP

- **VPN Server IP/Domain Name** - Enter the IP address or domain name of the VPN server provided by your ISP.
- **User Name/Password** - Enter the User Name and Password provided by your ISP. These fields are case-sensitive.
- **Dynamic IP/ Static IP** - Select **Static IP** if IP address, subnet mask, gateway and DNS server address have been provided by your ISP. Otherwise, please select **Dynamic IP**.
- **Connect on Demand** - You can configure the router to disconnect from your Internet connection after a specified period of inactivity (**Max Idle Time**). If your Internet connection has been terminated due to inactivity, **Connect on Demand** enables the router to automatically re-establish your connection as soon as you attempt to access the Internet again. If you wish to activate **Connect on Demand**, check the radio button. If you want your Internet connection to remain active at all times, enter 0 in the **Max Idle Time** field. Otherwise, enter the number of minutes you want to have elapsed before your Internet connection terminates.

- **Connect Automatically** - Connect automatically after the router is disconnected. To use this option, check the radio button.
- **Connect Manually** - You can configure the router to make it connect or disconnect manually. After a specified period of inactivity (**Max Idle Time**), the router will disconnect from your Internet connection, and you will not be able to re-establish your connection automatically as soon as you attempt to access the Internet again. To use this option, check the radio button. If you want your Internet connection to remain active at all times, enter "0" in the **Max Idle Time** field. Otherwise, enter the number of minutes that you wish to have the Internet connecting last unless a new link is requested.

Caution: Sometimes the connection cannot be disconnected although you specify a time to **Max Idle Time**, because some applications are visiting the Internet continually in the background.

Click the **Save** button to save your settings.

5. If your ISP provides PPTP connection, please select **PPTP/Russia PPTP** option. And you should enter the following parameters (Figure 5-8).

WAN

WAN Connection Type: PPTP/Russia PPTP Detect

VPN Server IP/Domain Name:

User Name:

Password:

Confirm Password:

Connect
Disconnect
Disconnected!

Dynamic IP Static IP

IP Address: 0.0.0.0

Subnet Mask: 0.0.0.0

Gateway: 0.0.0.0

DNS: 0.0.0.0 , 0.0.0.0

Internet IP Address: 0.0.0.0

Internet DNS: 0.0.0.0 , 0.0.0.0

MTU Size (in bytes): 1420 (The default is 1420, do not change unless necessary.)

Max Idle Time: 15 minutes (0 means remain active at all times.)

Connection Mode:

Connect on Demand
 Connect Automatically
 Connect Manually

Save

Figure 5-8 PPTP Settings

- **VPN Server IP/Domain Name** - Enter the IP address or domain name of the VPN server provided by your ISP.
- **User Name/Password** - Enter the User Name and Password provided by your ISP. These fields are case-sensitive.
- **Dynamic IP/ Static IP** - Select **Static IP** if IP address, subnet mask, gateway and DNS server address have been provided by your ISP. Otherwise, please select **Dynamic IP**.
- **Connect on Demand** - You can configure the router to disconnect from your Internet connection after a specified period of inactivity (**Max Idle Time**). If your Internet connection has been terminated due to inactivity, **Connect on Demand** enables the router to automatically re-establish your connection as soon as you attempt to access the Internet again. If you wish to activate **Connect on Demand**, check the radio button. If you want your Internet connection to remain active at all times, enter "0" in the **Max Idle Time** field. Otherwise, enter the number of minutes you want to have elapsed before your Internet connection terminates.
- **Connect Automatically** - Connect automatically after the router is disconnected. To use this option, check the radio button.
- **Connect Manually** - You can configure the router to make it connect or disconnect manually. After a specified period of inactivity (**Max Idle Time**), the router will disconnect from your Internet connection, and you will not be able to re-establish your connection automatically as soon as you attempt to access the Internet again. To use this option, click the radio button. If you want your Internet connection to remain active at all times, enter "0" in the **Max Idle Time** field. Otherwise, enter the number in minutes that you wish to have the Internet connecting last unless a new link is requested.

Caution: Sometimes the connection cannot be disconnected although you specify a time to **Max Idle Time** because some applications are visiting the Internet continually in the background.

Click the **Save** button to save your settings.

 **Note:**

If you don't know how to choose the appropriate connection type, click the **Detect** button to allow the router to automatically search your Internet connection for servers and protocols. The connection type will be reported when an active Internet service is successfully detected by the router. This report is for your reference only. To make sure the connection type your ISP provides, please refer to the ISP. The various types of Internet connections that the router can detect are as follows:

- **PPPoE** - Connections which use PPPoE that requires a user name and password.
- **Dynamic IP** - Connections which use dynamic IP address assignment.

- **Static IP** - Connections which use static IP address assignment.

The router cannot detect PPTP/L2TP connections with your ISP. If your ISP uses one of these protocols, then you must configure your connection manually.

5.2.2 MAC Clone

Choose menu “**Advanced**→**Network**→**MAC Clone**”, you can configure the MAC address of the WAN on the screen below, Figure 5-9.

Figure 5-9 MAC Address Clone

Some ISPs require that you register the MAC Address of your adapter. Changes are rarely needed here.

- **WAN MAC Address** - This field displays the current MAC address of the Internet port. If your ISP requires you to register the MAC address, please enter the correct MAC address into this field in XX-XX-XX-XX-XX-XX format (X is any hexadecimal digit).
- **Your PC's MAC Address** - This field displays the MAC address of the PC that is managing the router. If the MAC address is required, you can click the **Clone MAC Address** button and this MAC address will fill in the **WAN MAC Address** field.

Click **Restore Factory MAC** to restore the MAC address of Internet port to the factory default value. Click the **Save** button to save your settings.

Note:

Only the PC on your LAN can use the **MAC Address Clone** function.

5.2.3 LAN

Choose menu “**Advanced**→**Network**→**LAN**”, you can configure the IP parameters of the LAN on the screen as below.

Figure 5-10 LAN

- **MAC Address** - The physical address of the router, as seen from the LAN. The value can't be changed.
- **IP Address** - Enter the IP address of your router or reset it in dotted-decimal notation (factory default: 192.168.0.1).
- **Subnet Mask** - An address code that determines the size of the network. Normally use 255.255.255.0 as the subnet mask.
- **IGMP Proxy** - If you want to watch TV through IGMP, please enable it.

Note:

- 1) If you change the IP Address of LAN, you must use the new IP Address to log in the router.
- 2) If the new LAN IP Address you set is not in the same subnet, the IP Address pool of the DHCP server will change accordingly at the same time, while the Virtual Server and DMZ Host will not take effect until they are re-configured.

5.3 Dual Band Selection

Choose menu “**Advanced**→**Dual Band Selection**”, and you can choose the working frequency for your router. It is recommended that your computers and devices running video and voice applications use the 5GHz band, while your guest access and computers that are only browsing the web use the 2.4GHz band.

Figure 5-11 Dual Band Selection

5.4 Wireless 2.4GHz

Figure 5-12 Wireless menu

There are six submenus under the Wireless menu, shown in Figure 5-12: **Wireless Settings**, **WPS**, **Wireless Security**, **Wireless MAC Filtering**, **Wireless Advanced** and **Wireless Statistics**. Click any of them, and you will be able to configure the corresponding functions.

5.4.1 Wireless Settings

Choose menu “**Advanced**→**Wireless 2.4GHz**→**Wireless Settings**”, you can configure the basic settings for the wireless network of 2.4GHz on this page.

 A screenshot of the 'Wireless Settings (2.4GHz)' configuration page. The page has a blue header with the title 'Wireless Settings (2.4GHz)'. Below the header, there are several configuration fields:

- Wireless Network Name:** A text input field containing 'TP-LINK_7AFF' with a note '(Also called the SSID)'.
- Region:** A dropdown menu set to 'United States'.
- Warning:** A text block stating 'Ensure you select a correct country to conform local law. Incorrect settings may cause interference.'
- Mode:** A dropdown menu set to '11bgn mixed'.
- Channel Width:** A dropdown menu set to '40MHz'.
- Channel:** A dropdown menu set to 'Auto'.
- Enable SSID Broadcast:** A checked checkbox.
- Enable WDS Bridging:** An unchecked checkbox.

 At the bottom of the page, there is a 'Save' button.

Figure 5-13 Wireless Settings (2.4GHz)

- **Wireless Network Name** - The wireless network name (SSID) that the router uses. You can create a new one with up to 32 characters. The default SSID is set to be TP-LINK_XXXX. This value is case-sensitive. For example, *TEST* is NOT the same as *test*.
- **Region** - The geographic region where the router is being used. This field specifies the region where the wireless function of the router can be used. It might be illegal to use the

wireless features of the router in some parts of the world. If your country or region is not listed, please contact your local government agency for assistance.

Note:

Per FCC regulations, all Wi-Fi products marketed in the U.S. must be fixed to the U.S. region only.

- **Mode** - Select the desired mode.
 - **11n only** - Select if you are using 802.11n wireless clients.
 - **11bg mixed** - Select if you are using both 802.11b and 802.11g wireless clients.
 - **11bgn mixed** - Select if you are using a mix of 802.11b, 11g, and 11n wireless clients. It is strongly recommended that you set the Mode to **802.11bgn mixed**, and all of 802.11b, 802.11g, and 802.11n wireless stations can connect to the router.
- **Channel Width** - Select the channel width from the drop-down list, including **Auto**, **20MHz**, **40MHz**. The default setting is **Auto**.

Note:

If **11bg mixed** is selected in the **Mode** field, the **Channel Width** selecting field will turn grey and the value will become 20MHz, which is unable to be changed.

- **Channel** - This field determines which operating frequency will be used. The default channel is set to **Auto**, so the router will choose the best channel automatically. It is not necessary to change the wireless channel unless you notice interference problems with another nearby access point.
- **Enable SSID Broadcast** - When wireless clients survey the local area for wireless networks to associate with, they will detect the SSID broadcast by the router. If you select the **Enable SSID Broadcast** checkbox, the Wireless router will broadcast its name (SSID) on the air.
- **Enable WDS Bridging** - Check this box to enable WDS. With this function, the router can bridge two or more WLANs. If this checkbox is selected, you will have to set the following parameters as shown in Figure 5-14. Make sure the following settings are correct.

Enable WDS Bridging

SSID (to be bridged):

MAC Address (to be bridged): Example:00-1D-0F-11-22-33

Key Type:

WEP Index:

Auth Type:

Password:

Figure 5-14 WDS Settings

- **SSID (to be bridged)** - The SSID of the AP your router is going to connect to as a client. You can also use the Survey function to select the SSID to join.
- **MAC Address (to be bridged)** - The MAC address (BSSID) of the AP your router is going to connect to as a client. You can also use the Survey function to select the MAC address (BSSID) to join.
- **Survey** - Click this button, you can search the APs that run in all channels.
- **Key type** - This option should be chosen according to the AP's security configuration.
- **WEP Index** - This option should be chosen if the key type is WEP. It indicates the index of the WEP key.
- **Auth Type** - This option should be chosen if the key type is WEP. It indicates the authorization type of the Root AP.
- **Password** - If the AP your router is going to connect needs password, you need to fill the password in this blank.

5.4.2 WPS

Choose menu “**Advanced→Wireless 2.4GHz→WPS**”, you can see the screen as shown in Figure 5-15. This section will guide you to add a new wireless device to an existing network quickly by WPS (Wi-Fi Protected Setup) function.

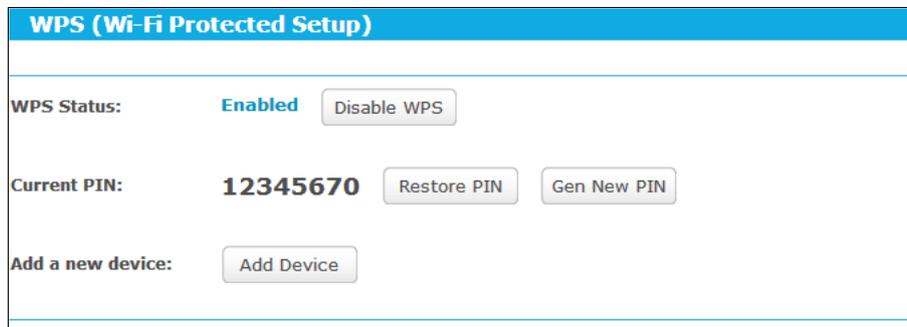

Figure 5-15 WPS

- **WPS Status** - Enable or disable the WPS function here.
- **Current PIN** - Displays the current value of the router's PIN. The default PIN of the router can be found in the label or User Guide.
- **Restore PIN** - Restore the PIN of the router to its default value.
- **Gen New PIN** - Click this button, and then you can get a new random value for the router's PIN. You can ensure the network security by generating a new PIN.
- **Add device** - You can add a new device to the existing network manually by clicking this button.

If the wireless adapter supports Wi-Fi Protected Setup (WPS), you can establish a wireless connection between wireless adapter and the router using either Push Button Configuration (PBC) method or PIN method.

I. Use the Wi-Fi Protected Setup Button

Use this method if your client device has a WPS button.

Step 1: Press the **WPS/Reset** button on the back panel of the router.

Step 2: Press and hold the **WPS** button of the client device. The WPS LED flashes for two minutes during the Wi-Fi Protected Setup process.

Step 3: When the WPS LED is on, the client device has successfully connected to the router.

II. Enter the client device's PIN on the router

Use this method if your client device does not have the WPS button, but has a Wi-Fi Protected Setup PIN number.

Step 1: Enable WPS. The default is enabled. Click the **Add device** button in Figure 5-15, then Figure 5-16 will appear.

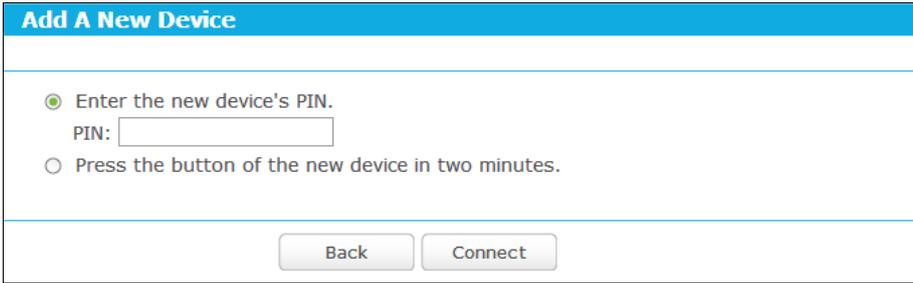

Figure 5-16 Add A New Device

Step 2: Enter the PIN number from the client device in the field on the WPS screen above. Then click **Connect** button.

Step 3: “**Connect successfully**” will appear on the screen of Figure 5-16, which means the client device has successfully connected to the router.

Note:

- 1) The WPS LED on the router will keep on for five minutes if the device has been successfully added to the network.
- 2) The WPS function cannot be configured if the wireless function of the router is disabled. Please make sure the wireless function is enabled before configuring the WPS.

5.4.3 Wireless Security

Choose menu “**Advanced**→**Wireless 2.4GHz**→**Wireless Security**”, you can configure the security settings of your wireless network. There are five wireless security modes supported by the router: WPA-Personal, WPA2-Personal, WPA-Enterprise, WPA2-Enterprise, and WEP.

Figure 5-17 Wireless Security

- **Disable Security** - If you do not want to use wireless security, check this radio button. But it's strongly recommended to choose one of the following modes to enable security.
- **WPA/WPA2-Personal** - It's the WPA/WPA2 authentication type based on pre-shared passphrase. The router is configured by this security type by default.
 - **Version** - You can choose the version of the **WPA-PSK** or **WPA2-PSK** security on the drop-down list. The default setting is **WPA2-PSK**.
 - **Encryption** - You can select either **TKIP** or **AES** as Encryption. The default setting is **AES**.

Note:

If you check the **WPA/WPA2-Personal** radio button and choose **TKIP** encryption, you will find a notice in red as shown in Figure 5-18.

WPA/WPA2 - Personal(Recommended)

Version:

Encryption:

Wireless Password:
(You can enter ASCII characters between 8 and 63 or Hexadecimal characters between 8 and 64.)

Group Key Update Period: Seconds (Keep it default if you are not sure, minimum is 30, 0 means no update)

We do not recommend using the TKIP encryption if this device operates in 802.11n mode due to the fact that TKIP is not supported by 802.11n specification. If you choose WPA-PSK version or TKIP encryption, WPS function will be disabled.

Figure 5-18 WPA/WPA2 – Personal

- **Wireless Password** - You can enter ASCII characters between 8 and 63 characters or 8 to 64 Hexadecimal characters. The default password is the same with the default PIN code, which is labeled on the router or can be found in Figure 5-15.
- **Group Key Update Period** - Specify the group key update interval in seconds. The value should be 30 or above. Enter 0 to disable the update.
- **WPA/WPA2- Enterprise** - It's based on Radius Server. If you choose WPA/WPA2 - Enterprise, WPS function will be disabled.
 - **Version** - you can choose the version of the WPA security on the drop-down list. The default setting is **Automatic**, which can select **WPA** (Wi-Fi Protected Access) or **WPA2** (WPA version 2) automatically based on the wireless station's capability and request.
 - **Encryption** - You can select either **Automatic**, or **TKIP** or **AES**.

Note:

If you check the **WPA/WPA2-Enterprise** radio button and choose **TKIP** encryption, you will find a notice in red as shown in Figure 5-19.

WPA/WPA2 - Enterprise

Version:

Encryption:

Radius Server IP:

Radius Port: (1-65535, 0 stands for default port 1812)

Radius Password:

Group Key Update Period: (in second, minimum is 30, 0 means no update)

We do not recommend using the TKIP encryption if this device operates in 802.11n mode due to the fact that TKIP is not supported by 802.11n specification. If you choose WPA/WPA2 - Enterprise, WPS function will be disabled.

Figure 5-19 WPA/WPA2 - Enterprise

- **Radius Server IP** - Enter the IP address of the Radius server.
- **Radius Port** - Enter the port number of the Radius server.
- **Radius Password** - Enter the password for the Radius server.

- **Group Key Update Period** - Specify the group key update interval in seconds. The value should be 30 or above. Enter 0 to disable the update.
- **WEP** - It is based on the IEEE 802.11 standard. If you check this radio button, you will find a notice in red as shown in Figure 5-20.

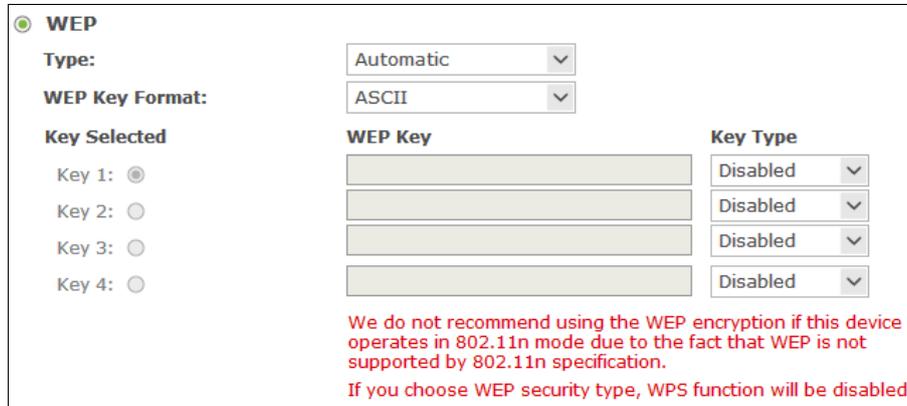

Figure 5-20 WEP

- **Type** - you can choose the type for the WEP security on the drop-down list. The default setting is **Automatic**, which can select **Shared Key** or **Open System** authentication type automatically based on the wireless station's capability and request.
- **WEP Key Format** - **Hexadecimal** and **ASCII** formats are provided here. **Hexadecimal** format stands for any combination of hexadecimal digits (0-9, a-f, A-F) in the specified length. **ASCII** format stands for any combination of keyboard characters in the specified length.
- **WEP Key** - Select which of the four keys will be used and enter the matching WEP key that you create. Make sure these values are identical on all wireless stations in your network.
- **Key Type** - You can select the WEP key length (64-bit or 128-bit) for encryption. "Disabled" means this WEP key entry is invalid.

64-bit - You can enter 10 hexadecimal digits (any combination of 0-9, a-f, A-F, zero key is not promoted) or 5 ASCII characters.

128-bit - You can enter 26 hexadecimal digits (any combination of 0-9, a-f, A-F, zero key is not promoted) or 13 ASCII characters.

Note:

If you do not set the key, the wireless security function is still disabled even if you have selected Shared Key as Authentication Type.

Be sure to click the **Save** button to save your settings on this page.

5.4.4 Wireless MAC Filtering

Choose menu “**Advanced**→**Wireless 2.4GHz**→**Wireless MAC Filtering**”, you can control the wireless access by configuring the **Wireless MAC Filtering** function, shown in Figure 5-21.

Figure 5-21 Wireless MAC Filtering

To filter wireless users by MAC Address, click **Enable**. The default setting is **Disabled**.

- **MAC Address** - The wireless station's MAC address that you want to filter.
- **Status** - The status of this entry, either **Enabled** or **Disabled**.
- **Description** - A simple description of the wireless station.

To Add a Wireless MAC Address filtering entry, click the **Add New...** button. The "**Add or Modify Wireless MAC Address Filtering entry**" page will appear, shown in Figure 5-22.

Figure 5-22 Add or Modify Wireless MAC Address Filtering entry

To add or modify a MAC Address Filtering entry, follow these instructions:

1. Enter the appropriate MAC Address into the **MAC Address** field. The format of the MAC Address is XX-XX-XX-XX-XX-XX (X is any hexadecimal digit). For example: 00-0A-EB-B0-00-0B.
2. Give a simple description for the wireless station in the **Description** field. For example: Wireless station A.

3. Select **Enabled** or **Disabled** for this entry on the **Status** drop-down list.
4. Click the **Save** button to save this entry.

To modify or delete an existing entry:

1. Click the **Modify** in the entry you want to modify. If you want to delete the entry, click the **Delete**.
2. Modify the information.
3. Click the **Save** button.

Click the **Enable All** button to make all entries enabled

Click the **Disable All** button to make all entries disabled.

Click the **Delete All** button to delete all entries.

Click the **Next** button to go to the next page.

Click the **Previous** button to return to the previous page.

For example: If you desire that the wireless station A with MAC address 00-0A-EB-B0-00-0B and the wireless station B with MAC address 00-0A-EB-00-07-5F are able to access the router, but all the other wireless stations cannot access the router, you can configure the **Wireless MAC Address Filtering** list by following these steps:

1. Click the **Enable** button to enable this function.
2. Select the radio button "**Allow the stations specified by any enabled entries in the list to access**" for **Filtering Rules**.
3. Delete all or disable all entries if there are any entries already.
4. Click the **Add New...** button.
 - 1) Enter the MAC address 00-0A-EB-B0-00-0B/00-0A-EB-00-07-5F in the **MAC Address** field.
 - 2) Enter wireless station A/B in the **Description** field.
 - 3) Select **Enabled** in the **Status** drop-down list.
 - 4) Click the **Save** button.

The filtering rules that configured should be similar to the following list:

Filtering Rules

Deny the stations specified by any enabled entries in the list to access.
 Allow the stations specified by any enabled entries in the list to access.

ID	MAC Address	Status	Description	Modify
1	00-0A-EB-B0-00-0B	Enabled	wireless station A	Modify Delete
2	00-0A-EB-00-07-5F	Enabled	wireless station B	Modify Delete

5.4.5 Wireless Advanced

Choose menu “**Advanced→Wireless 2.4GHz→Wireless Advanced**”, you can configure the advanced settings of your wireless network.

Wireless Advanced

Transmit Power: High
 Beacon Interval : (40-1000)
 RTS Threshold: (1-2346)
 Fragmentation Threshold: (256-2346)
 DTIM Interval: (1-255)
 Enable WMM
 Enable Short GI
 Enable AP Isolation

Figure 5-23 Wireless Advanced

- **Transmit Power** - Here you can specify the transmit power of router. You can select High, Middle or Low which you would like. High is the default setting and is recommended.
- **Beacon Interval** - Enter a value between 40-1000 milliseconds for Beacon Interval here. The beacons are the packets sent by the router to synchronize a wireless network. Beacon Interval value determines the time interval of the beacons. The default value is 100.
- **RTS Threshold** - Here you can specify the RTS (Request to Send) Threshold. If the packet is larger than the specified RTS Threshold size, the router will send RTS frames to a particular receiving station and negotiate the sending of a data frame. The default value is 2346.
- **Fragmentation Threshold** - This value is the maximum size determining whether packets will be fragmented. Setting the Fragmentation Threshold too low may result in poor network performance because of excessive packets. 2346 is the default setting and is recommended.
- **DTIM Interval** - This value determines the interval of the Delivery Traffic Indication Message (DTIM). A DTIM field is a countdown field informing clients of the next window for listening to

broadcast and multicast messages. When the router has buffered broadcast or multicast messages for associated clients, it sends the next DTIM with a DTIM Interval value. You can specify the value between 1-255 Beacon Intervals. The default value is 1, which indicates the DTIM Interval is the same as Beacon Interval.

- **Enable WMM - WMM** function can guarantee the packets with high-priority messages being transmitted preferentially. It is strongly recommended.
- **Enable Short GI** - This function is recommended for it will increase the data capacity by reducing the guard interval time.
- **Enabled AP Isolation** - This function can isolate wireless stations on your network from each other. Wireless devices will be able to communicate with the router but not with each other. To use this function, check this box. AP Isolation is disabled by default.

 **Note:**

If you are not familiar with the setting items in this page, it's strongly recommended to keep the provided default values; otherwise it may result in lower wireless network performance.

5.4.6 Wireless Statistics

Choose menu “**Advanced**→**Wireless 2.4GHz**→**Wireless Statistics**”, you can see the MAC Address, Current Status, Received Packets and Sent Packets for each connected wireless station.

Wireless Statistics					
Current Connected Wireless Stations numbers:				1	<input type="button" value="Refresh"/>
ID	MAC Address	Current Status	Received Packets	Sent Packets	
1	78-A3-E4-7B-B1-4D	AP-UP	135	64	
<input type="button" value="Previous"/>		<input type="button" value="Next"/>			

Figure 5-24 Wireless Statistics

- **MAC Address** - The connected wireless station's MAC address
- **Current Status** - The connected wireless station's running status, one of **STA-AUTH/ STA-ASSOC/ STA-JOINED/ WPA/ WPA-PSK/ WPA2/ WPA2-PSK/ AP-UP/ AP-DOWN/ Disconnected**
- **Received Packets** - Packets received by the station
- **Sent Packets** - Packets sent by the station

You cannot change any of the values on this page. To update this page and to show the current connected wireless stations, click on the **Refresh** button.

If the numbers of connected wireless stations go beyond one page, click the **Next** button to go to the next page and click the **Previous** button to return the previous page.

Note:

This page will be refreshed automatically every 5 seconds.

5.5 Wireless 5GHz

Figure 5-25 Wireless menu

There are six submenus under the Wireless menu (shown in Figure 5-25): **Wireless Settings**, **WPS**, **Wireless Security**, **Wireless MAC Filtering**, **Wireless Advanced** and **Wireless Statistics**. Click any of them, and you will be able to configure the corresponding functions.

5.5.1 Wireless Settings

Choose menu “**Advanced**→**Wireless 5GHz**→**Wireless Settings**”, you can configure the basic settings for the wireless network of 5GHz on this page.

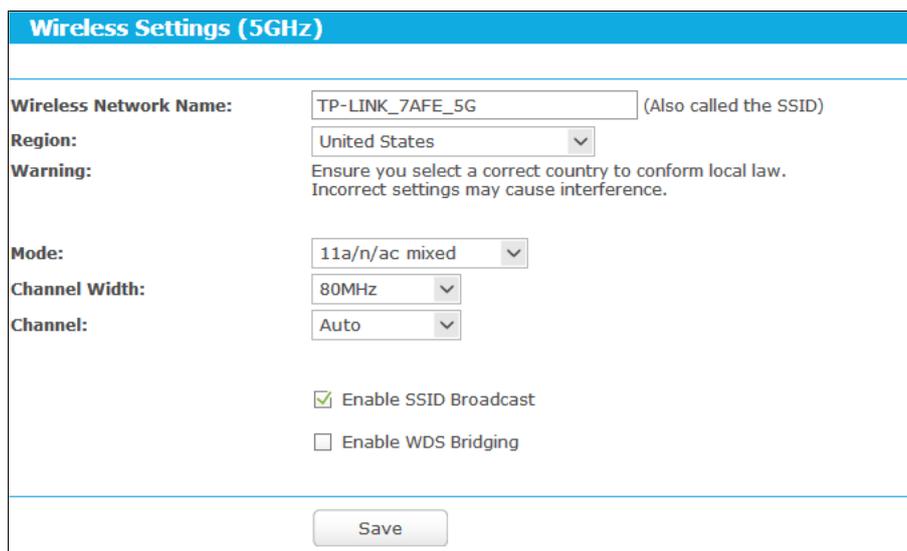

Figure 5-26 Wireless Settings (5GHz)

- **Wireless Network Name** - The wireless network name (SSID) that the router uses. You can create a new one with up to 32 characters. The default SSID is set to be

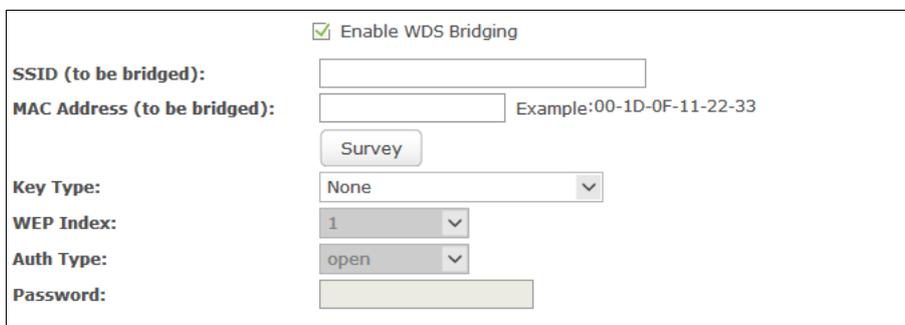

TP-LINK_XXXX_5G. This value is case-sensitive. For example, *TEST* is NOT the same as *test*.

- **Region** - The geographic region where the router is being used. This field specifies the region where the wireless function of the router can be used. It might be illegal to use the wireless features of the router in some parts of the world. If your country or region is not listed, please contact your local government agency for assistance.

 **Note:**

Per FCC regulations, all Wi-Fi products marketed in the U.S. must be fixed to the U.S. region only.

- **Mode** - Select the desired mode.
 - **11ac only** - Select if you are using 802.11ac wireless clients.
 - **11a/n/ac mixed** - Select if you are using a mix of 802.11a, 11n, and 11ac wireless clients. This is the default mode, where all of 802.11a, 802.11n, and 802.11ac wireless stations can connect to the router.
- **Channel Width** - Select the channel width from the drop-down list, including **Auto**, **20MHz**, **40MHz**, **80MHz**. The default setting is **Auto**.
- **Channel** - This field determines which operating frequency will be used. The default channel is set to **Auto**, so the router will choose the best channel automatically. It is not necessary to change the wireless channel unless you notice interference problems with another nearby access point.
- **Enable SSID Broadcast** - When wireless clients survey the local area for wireless networks to associate with, they will detect the SSID broadcast by the router. If you select the **Enable SSID Broadcast** checkbox, the Wireless router will broadcast its name (SSID) on the air.
- **Enable WDS Bridging** - Check this box to enable WDS. With this function, the router can bridge two or more WLANs. If this checkbox is selected, you will have to set the following parameters as shown in Figure 5-27. Make sure the following settings are correct.

Enable WDS Bridging

SSID (to be bridged):

MAC Address (to be bridged): Example:00-1D-0F-11-22-33

Key Type: ▼

WEP Index: ▼

Auth Type: ▼

Password:

Figure 5-27 WDS Settings

- **SSID (to be bridged)** - The SSID of the AP your router is going to connect to as a client. You can also use the search function to select the SSID to join.
- **MAC Address (to be bridged)** - The MAC address (BSSID) of the AP your router is going to connect to as a client. You can also use the Survey function to select the MAC address (BSSID) to join.
- **Survey** - Click this button, you can search the APs that run in all channels.
- **Key type** - This option should be chosen according to the AP's security configuration. It is recommended that the security type is the same as your AP's security type
- **WEP Index** - This option should be chosen if the key type is WEP. It indicates the index of the WEP key.
- **Auth Type** - This option should be chosen if the key type is WEP. It indicates the authorization type of the Root AP.
- **Password** - If the AP your router is going to connect needs password, you need to fill the password in this blank.

5.5.2 WPS

Choose menu “**Advanced**→**Wireless 5GHz**→**WPS**”, you can see the screen as shown in Figure 5-28. This section will guide you to add a new wireless device to an existing network quickly by WPS (Wi-Fi Protected Setup) function.

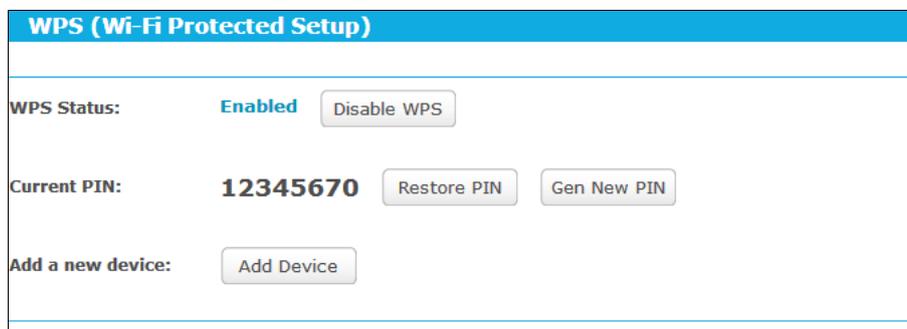

Figure 5-28 WPS

- **WPS Status** - Enable or disable the WPS function here.
- **Current PIN** - The current value of the router's PIN is displayed here. The default PIN of the router can be found in the label or User Guide.
- **Restore PIN** - Restore the PIN of the router to its default.
- **Gen New PIN** - Click this button, and then you can get a new random value for the router's PIN. You can ensure the network security by generating a new PIN.
- **Add Device** - You can add a new device to the existing network manually by clicking this button.

If the wireless adapter supports Wi-Fi Protected Setup (WPS), you can establish a wireless connection between wireless adapter and router using either Push Button Configuration (PBC) method or PIN method.

Note:

To build a successful connection by WPS, you should also do the corresponding configuration of the new device for WPS function meanwhile.

I. Use the Wi-Fi Protected Setup Button

Use this method if your client device has a Wi-Fi Protected Setup button.

Step 1: Press the **WPS/Reset** button on the back panel of the router

Step 2: Press and hold the WPS button of the client device directly. The Wi-Fi Protected Setup LED flashes for two minutes during the Wi-Fi Protected Setup process.

Step 3: When the WPS LED is on, the client device has successfully connected to the router.

II. Enter the client device's PIN on the router

Use this method if your client device does not have the WPS button, but has a Wi-Fi Protected Setup PIN number.

Step 1: Enable WPS. The default is enabled. Click the **Add device** button in Figure 5-28, then Figure 5-29 will appear.

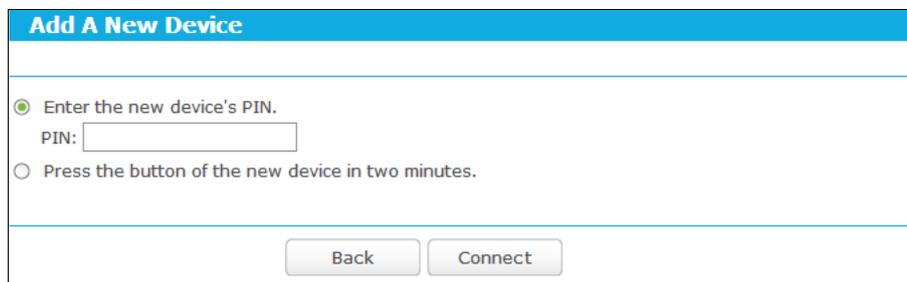

Figure 5-29 Add A New Device

Step 2: Enter the PIN number from the client device in the above PIN field. Then click **Connect** button.

Step 3: “**Connect successfully**” will appear on the screen of Figure 5-29, which means the client device has successfully connected to the router.

Note:

- 1) The WPS LED on the router will keep on for five minutes if the device has been successfully added to the network.
- 2) The WPS function cannot be configured if the wireless function of the router is disabled. Please make sure the wireless function is enabled before configuring the WPS.

5.5.3 Wireless Security

Choose menu “**Advanced**→**Wireless 5GHz**→**Wireless Security**”, you can configure the security settings of your wireless network.

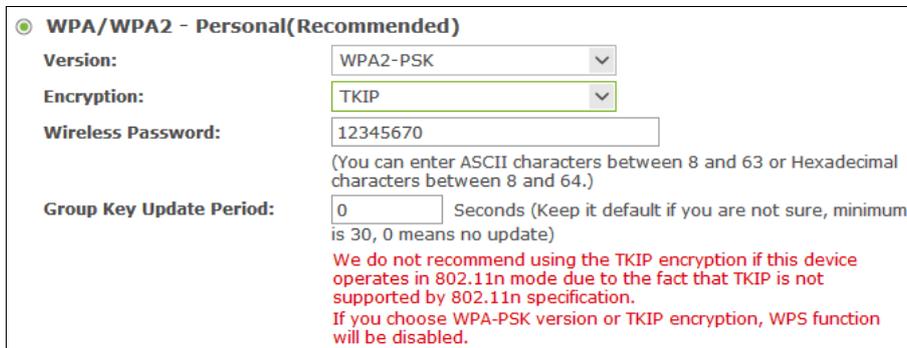

There are five wireless security modes supported by the router: WPA-Personal, WPA2-Personal, WPA-Enterprise, WPA2-Enterprise, and WEP.

Figure 5-30 Wireless Security

- **Disable Security** - If you do not want to use wireless security, check this radio button. But it's strongly recommended to choose one of the following modes to enable security.
- **WPA/WPA2-Personal** - It's the WPA/WPA2 authentication type based on pre-shared passphrase. The router is configured by this security type by default.
 - **Version** - You can choose the version of the **WPA-PSK** or **WPA2-PSK** security on the drop-down list. The default setting is **WPA2-PSK**.
 - **Encryption** - You can select either **TKIP** or **AES** as Encryption. The default setting is **AES**.

Note:

If you check the **WPA/WPA2-Personal** radio button and choose **TKIP** encryption, you will find a notice in red as shown in Figure 5-31.

WPA/WPA2 - Personal(Recommended)

Version: WPA2-PSK

Encryption: TKIP

Wireless Password: 12345670
(You can enter ASCII characters between 8 and 63 or Hexadecimal characters between 8 and 64.)

Group Key Update Period: 0 Seconds (Keep it default if you are not sure, minimum is 30, 0 means no update)

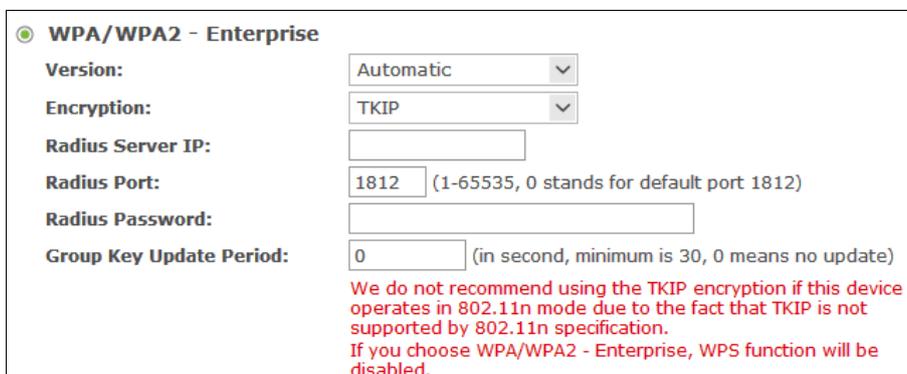

We do not recommend using the TKIP encryption if this device operates in 802.11n mode due to the fact that TKIP is not supported by 802.11n specification. If you choose WPA-PSK version or TKIP encryption, WPS function will be disabled.

Figure 5-31 WPA/WPA2 – Personal

- **Wireless Password** - You can enter ASCII characters between 8 and 63 characters or 8 to 64 Hexadecimal characters. The default password is the same with the default PIN code, which is labeled on the bottom of the router or can be found in Figure 5-28.
- **Group Key Update Period** - Specify the group key update interval in seconds. The value should be 30 or above. Enter 0 to disable the update.
- **WPA/WPA2- Enterprise** - It's based on Radius Server. If you choose WPA/WPA2 - Enterprise, WPS function will be disabled.
 - **Version** - you can choose the version of the WPA security on the drop-down list. The default setting is **Automatic**, which can select **WPA** (Wi-Fi Protected Access) or **WPA2** (WPA version 2) automatically based on the wireless station's capability and request.
 - **Encryption** - You can select either **Automatic**, or **TKIP** or **AES**.

Note:

If you check the **WPA/WPA2-Enterprise** radio button and choose **TKIP** encryption, you will find a notice in red as shown in Figure 5-32.

WPA/WPA2 - Enterprise

Version: Automatic

Encryption: TKIP

Radius Server IP: [Empty]

Radius Port: 1812 (1-65535, 0 stands for default port 1812)

Radius Password: [Empty]

Group Key Update Period: 0 (in second, minimum is 30, 0 means no update)

We do not recommend using the TKIP encryption if this device operates in 802.11n mode due to the fact that TKIP is not supported by 802.11n specification. If you choose WPA/WPA2 - Enterprise, WPS function will be disabled.

Figure 5-32 WPA/WPA2 - Enterprise

- **Radius Server IP** - Enter the IP address of the Radius server.
 - **Radius Port** - Enter the port number of the Radius server.
 - **Radius Password** - Enter the password for the Radius server.
 - **Group Key Update Period** - Specify the group key update interval in seconds. The value should be 30 or above. Enter 0 to disable the update.
- **WEP** - It is based on the IEEE 802.11 standard. If you check this radio button, you will find a notice in red as shown in Figure 5-33.

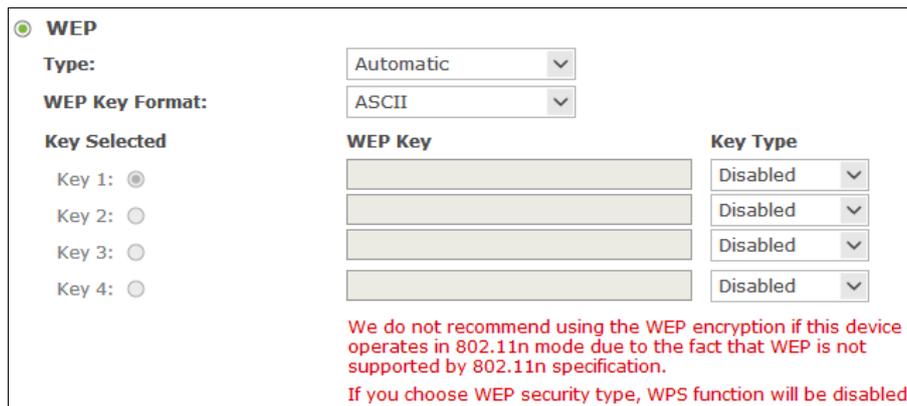

Figure 5-33 WEP

- **Type** - you can choose the type for the WEP security on the drop-down list. The default setting is **Automatic**, which can select **Shared Key** or **Open System** authentication type automatically based on the wireless station's capability and request.
- **WEP Key Format** - **Hexadecimal** and **ASCII** formats are provided here. **Hexadecimal** format stands for any combination of hexadecimal digits (0-9, a-f, A-F) in the specified length. **ASCII** format stands for any combination of keyboard characters in the specified length.
- **WEP Key** - Select which of the four keys will be used and enter the matching WEP key that you create. Make sure these values are identical on all wireless stations in your network.
- **Key Type** - You can select the WEP key length (64-bit or 128-bit) for encryption. "Disabled" means this WEP key entry is invalid.
 - 64-bit** - You can enter 10 hexadecimal digits (any combination of 0-9, a-f, A-F, zero key is not promoted) or 5 ASCII characters.
 - 128-bit** - You can enter 26 hexadecimal digits (any combination of 0-9, a-f, A-F, zero key is not promoted) or 13 ASCII characters.

Note:

If you do not set the key, the wireless security function is still disabled even if you have selected Shared Key as Authentication Type.

Be sure to click the **Save** button to save your settings on this page.

5.5.4 Wireless MAC Filtering

Choose menu “**Advanced**→**Wireless**→**MAC Filtering**”, you can control the wireless access by configuring the **Wireless MAC Filtering** function, shown in Figure 5-34.

Figure 5-34 Wireless MAC Filtering

To filter wireless users by MAC Address, click **Enable**. The default setting is **Disabled**.

- **MAC Address** - The wireless station's MAC address that you want to filter.
- **Status** - The status of this entry, either **Enabled** or **Disabled**.
- **Description** - A simple description of the wireless station.

To Add a Wireless MAC Address filtering entry, click the **Add New...** button. The "**Add or Modify Wireless MAC Address Filtering entry**" page will appear, shown in Figure 5-35.

Figure 5-35 Add or Modify Wireless MAC Address Filtering entry

To add or modify a MAC Address Filtering entry, follow these instructions:

1. Enter the appropriate MAC Address into the **MAC Address** field. The format of the MAC Address is XX-XX-XX-XX-XX-XX (X is any hexadecimal digit). For example: 00-0A-EB-B0-00-0B.
2. Give a simple description for the wireless station in the **Description** field. For example: Wireless station A.
3. Select **Enabled** or **Disabled** for this entry on the **Status** drop-down list.
4. Click the **Save** button to save this entry.

To modify or delete an existing entry:

1. Click the **Modify** in the entry you want to modify. If you want to delete the entry, click the **Delete**.
2. Modify the information.
3. Click the **Save** button.

Click the **Enable All** button to make all entries enabled

Click the **Disable All** button to make all entries disabled.

Click the **Delete All** button to delete all entries.

Click the **Next** button to go to the next page.

Click the **Previous** button to return to the previous page.

For example: If you desire that the wireless station A with MAC address 00-0A-EB-B0-00-0B and the wireless station B with MAC address 00-0A-EB-00-07-5F are able to access the router, but all the other wireless stations cannot access the router, you can configure the **Wireless MAC Address Filtering** list by following these steps:

1. Click the **Enable** button to enable this function.
2. Select the radio button "**Allow the stations specified by any enabled entries in the list to access**" for **Filtering Rules**.
3. Delete all or disable all entries if there are any entries already.
4. Click the **Add New...** button.
5. Enter the MAC address 00-0A-EB-B0-00-0B/00-0A-EB-00-07-5F in the **MAC Address** field.
6. Enter wireless station A/B in the **Description** field.
7. Select **Enabled** in the **Status** drop-down list.
8. Click the **Save** button.

The filtering rules that configured should be similar to the following list:

Filtering Rules

Deny the stations specified by any enabled entries in the list to access.
 Allow the stations specified by any enabled entries in the list to access.

ID	MAC Address	Status	Description	Modify
1	00-0A-EB-B0-00-0B	Enabled	wireless station A	Modify Delete
2	00-0A-EB-00-07-5F	Enabled	wireless station B	Modify Delete

5.5.5 Wireless Advanced

Choose menu “**Advanced**→**Wireless**→**Wireless Advanced**”, you can configure the advanced settings of your wireless network.

Wireless Advanced

Transmit Power: High
Beacon Interval : 100 (40-1000)
RTS Threshold: 2346 (1-2346)
Fragmentation Threshold: 2346 (256-2346)
DTIM Interval: 1 (1-255)

Enable WMM
 Enable Short GI
 Enable AP Isolation

Figure 5-36 Wireless Advanced

- **Transmit Power** - Here you can specify the transmit power of router. You can select High, Middle or Low which you would like. High is the default setting and is recommended.
- **Beacon Interval** - Enter a value between 40-1000 milliseconds for Beacon Interval here. The beacons are the packets sent by the router to synchronize a wireless network. Beacon Interval value determines the time interval of the beacons. The default value is 100.
- **RTS Threshold** - Here you can specify the RTS (Request to Send) Threshold. If the packet is larger than the specified RTS Threshold size, the router will send RTS frames to a particular receiving station and negotiate the sending of a data frame. The default value is 2346.
- **Fragmentation Threshold** - This value is the maximum size determining whether packets will be fragmented. Setting the Fragmentation Threshold too low may result in poor network performance because of excessive packets. 2346 is the default setting and is recommended.
- **DTIM Interval** - This value determines the interval of the Delivery Traffic Indication Message (DTIM). A DTIM field is a countdown field informing clients of the next window for listening to broadcast and multicast messages. When the router has buffered broadcast or multicast

messages for associated clients, it sends the next DTIM with a DTIM Interval value. You can specify the value between 1-255 Beacon Intervals. The default value is 1, which indicates the DTIM Interval is the same as Beacon Interval.

- **Enable WMM - WMM** function can guarantee the packets with high-priority messages being transmitted preferentially. It is strongly recommended.
- **Enable Short GI** - This function is recommended for it will increase the data capacity by reducing the guard interval time.
- **Enable AP Isolation** - This function can isolate wireless stations on your network from each other. Wireless devices will be able to communicate with the router but not with each other. To use this function, check this box. AP Isolation is disabled by default.

Note:

If you are not familiar with the setting items in this page, it's strongly recommended to keep the provided default values; otherwise it may result in lower wireless network performance.

5.5.6 Wireless Statistics

Choose menu “**Advanced→Wireless→Wireless Statistics**”, you can see the MAC Address, Current Status, Received Packets and Sent Packets for each connected wireless station.

Wireless Statistics					
Current Connected Wireless Stations numbers:				1	<input type="button" value="Refresh"/>
ID	MAC Address	Current Status	Received Packets	Sent Packets	
1	78-A3-E4-7B-B1-4D	AP-UP	135	64	
<input type="button" value="Previous"/>		<input type="button" value="Next"/>			

Figure 5-37 Wireless Statistics

- **MAC Address** - The connected wireless station's MAC address
- **Current Status** - The connected wireless station's running status, one of **STA-AUTH/ STA-ASSOC/ STA-JOINED/ WPA/ WPA-PSK/ WPA2/ WPA2-PSK/ AP-UP/ AP-DOWN/ Disconnected**
- **Received Packets** - Packets received by the station
- **Sent Packets** - Packets sent by the station

You cannot change any of the values on this page. To update this page and to show the current connected wireless stations, click on the **Refresh** button.

If the numbers of connected wireless stations go beyond one page, click the **Next** button to go to the next page and click the **Previous** button to return the previous page.

Note:

This page will be refreshed automatically every 5 seconds.

5.6 Guest Network

Choose menu “Advanced→Guest Network”, you can configure the Guest Network Wireless Settings on the page as shown in Figure 5-38.

Guest Network Wireless Settings

Before enabling the Guest Network Bandwidth Control feature, please go to the [NAT Boost](#) page and disable the NAT Boost function.

Access And Bandwidth Control

Allow Guests To See Each Other

Allow Guests To Access My Local Network

Enable Guest Network Bandwidth Control

Egress Bandwidth For Guest Network: Kbps (Range:1~1000000)

Ingress Bandwidth For Guest Network: Kbps (Range:1~1000000)

Wireless 2.4GHz

Enable Guest Network (2.4G)

Network Name: (Also called the SSID)

Guest Number: (Range:1~64)

Wireless Security: ▼

Access Time: ▼ can not be connected.

Everyday Select Days

Mon Tue Wed Thu Fri Sat Sun

All day-24 Hours

Start Time: (HHMM)

End Time: (HHMM)

Wireless 5GHz

Enable Guest Network (5G)

Network Name: (Also called the SSID)

Guest Number: (Range:1~64)

Wireless Security: ▼

Access Time: ▼ can not be connected.

Everyday Select Days

Mon Tue Wed Thu Fri Sat Sun

All day-24 Hours

Start Time: (HHMM)

End Time: (HHMM)

Figure 5-38 Guest Network Wireless Settings

➤ **Access And Bandwidth Control**

- **Allow Guests to See Each Other** - If this checkbox is selected, anyone who connects to the guest network can communicate with each other.
- **Allow Guests To Access My Local Network** - If this checkbox is selected, anyone who connects to the guest network has access to your local network, not just Internet access.
- **Enable Guest Network Bandwidth Control** - If this checkbox is selected, the Guest Network Bandwidth Control rules will take effect.
 - 1) **Egress Bandwidth For Guest Network** - Specify the upload speed through the WAN port for Guest Network.
 - 2) **Ingress Bandwidth For Guest Network** - Specify the download speed through the WAN port for Guest Network.

➤ **Wireless 2.4GHz**

- **Enable Guest Network (2.4G)** - Select this checkbox to enable 2.4GHz guest network.
- **Network Name** - Enter a value of up to 32 characters. The same Name (SSID) must be assigned to all wireless devices in your Guest Network.
- **Guest Number** - Limit the number of the guest.
- **Wireless Security** - You can configure the security of Guest Network here.
- **Access Time** - During this time the wireless stations could access the AP.

➤ **Wireless 5GHz**

- **Enable Guest Network (5G)** - Select this checkbox to enable 5GHz guest network.
- **Network Name** - Enter a value of up to 32 characters. The same Name (SSID) must be assigned to all wireless devices in your Guest Network.
- **Guest Number** - Limit the number of the guest.
- **Wireless Security** - You can configure the security of Guest Network here.
- **Access Time** - During this time the wireless stations could accessing the AP.

 **Note:**

The range of bandwidth for Guest Network is calculated according to the setting of Bandwidth Control on the page "Bandwidth Control->Control Settings".

5.7 DHCP

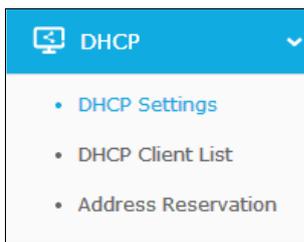

Figure 5-39 The DHCP menu

There are three submenus under the DHCP menu, shown in Figure 5-39: **DHCP Settings**, **DHCP Clients List** and **Address Reservation**. Click any of them, and you will be able to configure the corresponding functions.

5.7.1 DHCP Settings

Choose menu “**Advanced**→**DHCP**→**DHCP Settings**”, you can configure the DHCP Server on the page as shown in Figure 5-40. The router is set up by default as a DHCP (Dynamic Host Configuration Protocol) server, which provides the TCP/IP configuration for all the PC(s) that are connected to the router on the LAN.

Figure 5-40 DHCP Settings

- **DHCP Server - Enable or Disable** the DHCP server. If you disable the Server, you must have another DHCP server within your network or else you must configure the computer manually.
- **Start IP Address** - Specify an IP address for the DHCP Server to start with when assigning IP addresses. 192.168.0.100 is the default start address.
- **End IP Address** - Specify an IP address for the DHCP Server to end with when assigning IP addresses. 192.168.0.199 is the default end address.
- **Address Lease Time** - The **Address Lease Time** is the amount of time a network user will be allowed connection to the router with their current dynamic IP Address. Enter the amount of time in minutes and the user will be "leased" this dynamic IP Address. After the time is up,

the user will be automatically assigned a new dynamic IP address. The range of the time is 1 ~ 2880 minutes. The default value is 120 minutes.

- **Default Gateway** - (Optional.) It is suggested to input the IP address of the Ethernet port of the router. The default value is 192.168.0.1.
- **Default Domain** - (Optional) Input the domain name of your network.
- **Primary DNS** - (Optional) Input the DNS IP address provided by your ISP or consult your ISP.
- **Secondary DNS** - (Optional.) Input the IP address of another DNS server if your ISP provides two DNS servers.

 **Note:**

To use the DHCP server function of the router, you must configure all computers on the LAN as "Obtain an IP Address automatically".

5.7.2 DHCP Client List

Choose menu “**Advanced**→**DHCP**→**DHCP Client List**”, you can view the information about the clients attached to the router in the screen as shown in Figure 5-41.

DHCP Client List				
ID	Client Name	MAC Address	Assigned IP	Lease Time
1	xp1018	94-DE-80-5F-FF-12	192.168.0.100	01:59:21

Figure 5-41 DHCP Clients List

- **Client Name** - The name of the DHCP client
- **MAC Address** - The MAC address of the DHCP client
- **Assigned IP** - The IP address that the router has allocated to the DHCP client
- **Lease Time** - The time of the DHCP client leased. After the dynamic IP address has expired, a new dynamic IP address will be automatically assigned to the user.

You cannot change any of the values on this page. To update this page and to show the current attached devices, click the **Refresh** button.

5.7.3 Address Reservation

Choose menu “**Advanced**→**DHCP**→**Address Reservation**”, you can view and add a reserved address for clients via the next screen, shown in Figure 5-42. When you specify a reserved IP address for a PC on the LAN, that PC will always receive the same IP address each time when it

accesses the DHCP server. Reserved IP addresses should be assigned to the servers that require permanent IP settings.

Figure 5-42 Address Reservation

- **MAC Address** - The MAC address of the PC for which you want to reserve an IP address.
- **Reserved IP Address** - The IP address reserved for the PC by the router.
- **Status** - The status of this entry, either **Enabled** or **Disabled**.

To Reserve an IP address:

1. Click the **Add New...** button. Then Figure 5-43 will pop up.
2. Enter the MAC address (in XX-XX-XX-XX-XX-XX format.) and IP address (in dotted-decimal notation) of the computer for which you want to reserve an IP address.
3. Click the **Save** button.

Figure 5-43 Add or Modify an Address Reservation Entry

To modify or delete an existing entry:

1. Click the **Modify** in the entry you want to modify. If you want to delete the entry, click the **Delete**.
2. Modify the information.
3. Click the **Save** button.

Click the **Enable/Disable All** button to make all entries enabled/disabled

Click the **Delete All** button to delete all entries.

Click the **Next** button to go to the next page and Click the **Previous** button to return the previous page.

5.8 USB Settings

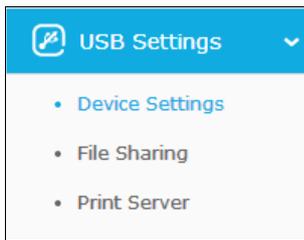

Figure 5-44 The USB Settings menu

There are three submenus under the USB Settings menu (shown in Figure 5-44): **Device Settings**, **File Sharing**, and **Print Server**. Click any of them, and you will be able to configure the corresponding functions.

5.8.1 Device Settings

Choose menu “**Advanced**→**USB Settings**→**Device Settings**”, you can configure the USB device attached to the router and view the information.

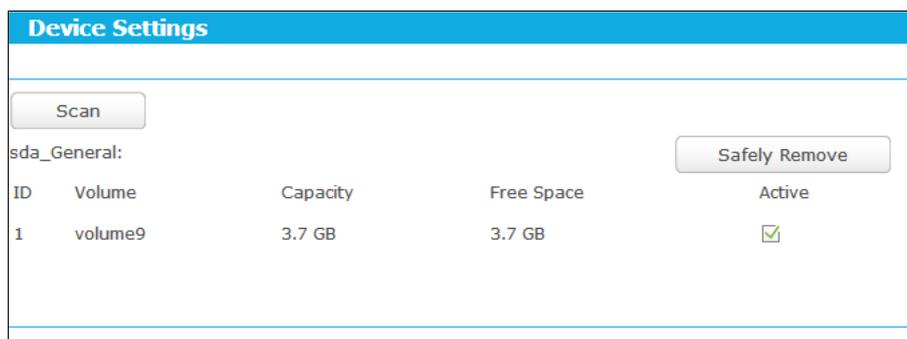

Figure 5-45 Device Settings

Click the **Scan** button to scan the USB device connected to the router.

- **Volume** - The volume name of the USB device the users have access to. Volume 1-8 is mapping to USB port1, and Volume 9-16 is mapping to USB port2.
- **Capacity** - The storage capacity of the USB device.
- **Free Space**- The available space of the USB device.
- **Active** - Select the checkbox to active the USB device.

Click the **Safely Remove** button to safely remove the USB storage device that is connected to USB port. This takes the device offline.

5.8.2 File Sharing

Choose menu “**Advanced**→**USB Settings**→**File Sharing**”, you can configure the sharing account and sharing settings.

File Sharing

Sharing Account
 Prepare the sharing account for the sharing contents. You can use the login user account or set a new user account as the sharing account.

Use Login Account
 Use Following Account

Username:
Password:
Confirm Password:

Sharing Settings

Network/Media Server Name: TP-LINK_137B00

Enable	Access Method	Link	Port
<input checked="" type="checkbox"/>	Network Neighborhood	\\192.168.0.1	--
<input checked="" type="checkbox"/>	FTP	ftp://192.168.0.1:21	21
<input type="checkbox"/>	FTP (Remote)	ftp://0.0.0.0:21 Edit	<input type="text" value="21"/>

Sharing Mode: Share All Share Selected Folders
Authentication: Require Login

Figure 5-46 File Sharing

➤ **Sharing Account**

- **Use Login Account** - Select this radio button, and the sharing account is the same with the login account.
- **Use Following Account** - Select this radio button, then you have to specify the new username and password in the **Username** and **Password** fields for sharing account.

➤ **Sharing Settings**

- **Network/Media Server Name** - Show the name of the network/media server. This is the name used to access the USB device connected to the router.
 - **Access Method** - Select the check boxes for the access methods that you want.
- 1) **Network Neighborhood:** This method is enabled by default. To access the USB device for example from a Windows computer:
 - i. Select **Start > Run**.
 - ii. Enter [\\192.168.0.1](ftp://192.168.0.1) in the dialog box and click the **OK** button.

- 2) **FTP:** This method is disabled by default. If you select this check box and click the **Save** button, the LAN users can access the USB device through FTP. To access the USB device for example from a Windows computer:
 - i. Select **Start > Run**.
 - ii. Enter <ftp://192.168.0.1:21> in the dialog box and click the **OK** button.
- 3) **FTP (Remote):** This method is disabled by default. If you select this check box, remote users can access the USB device through FTP over the Internet. This feature supports both downloading and uploading of files. To access the USB device for example from a Windows computer:
 - i. Select **Start > Run**.
 - ii. Enter <ftp://WAN IP:port> in the dialog box and click the **OK** button.

Note:

If the port for FTP (Remote) is changed, the port for FTP will be changed to the same port.

● **Sharing Mode**

- 1) If **Share All** is selected, all the folders in the USB device will be shared. Besides **Authentication** will appear for you to choose or not.
- 2) If **Share Selected Folders** is selected, only the folders you specified will be shared. You have to click the **Create Share Folder** appeared to specify folders allowed to be shared in the next screen.

Figure 5-47 Add or Modify Share Folder

- **Allow Guest Network Access** - If this checkbox is selected, guests are allowed to access the sharing file.
- **Enable Authentication** - If this checkbox is selected, then the file sharing is need authentication.
- **Enable Write Access** - If this checkbox is selected, then the sharing file is allowed write access.
- **Enable Media Sharing** - Select this checkbox to enable media sharing.

To specify the folders:

- i. Select the volume desired to share from the Volume Name drop-down list.
- ii. Create a share name, e.g. Movie.
- iii. Select the checkboxes according to your needs.
- iv. Select the folder allowed to be shared, e.g. Movies.
- v. Click the **Save** button.

5.8.3 Print Server

Choose menu “**Advanced**→**USB Settings**→**Print Server**”, you can enable or disable print server on the screen below.

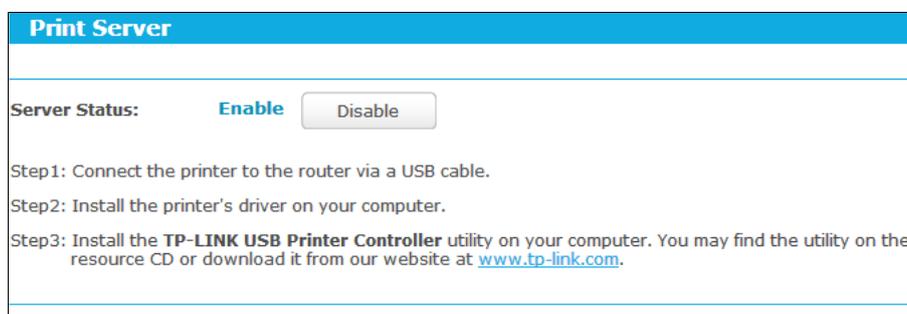

Figure 5-48 Print Server Setting

5.9 NAT Boost

Choose “**Advanced**→**NAT Boost**”, and you can enable or disable the NAT boost. It is enabled by default.

If NAT boost is enabled, the router will have the best throughout. If NAT boost if disabled, the **Bandwidth Control** can take effect and it also allows the statistics data to be collected. We do recommend to enable NAT Boost for the best performance in normal operation.

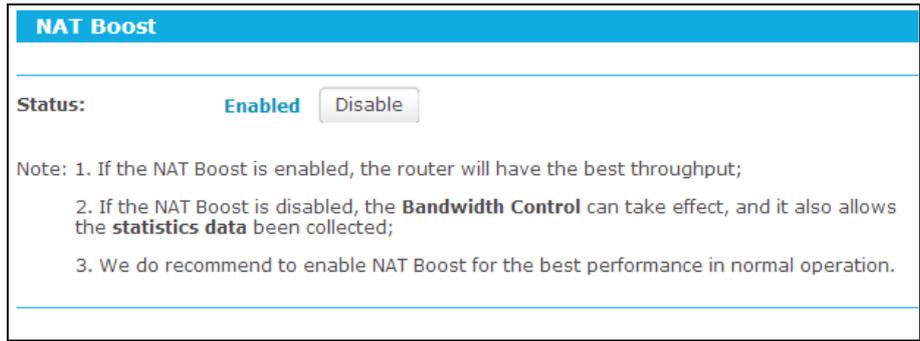

Figure 5-49 NAT Boost

5.10 Forwarding

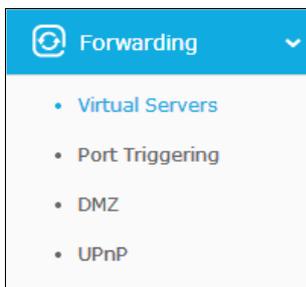

Figure 5-50 The Forwarding menu

There are four submenus under the Forwarding menu: **Virtual Servers**, **Port Triggering**, **DMZ** and **UPnP**. Click any of them, and you will be able to configure the corresponding function.

5.10.1 Virtual Servers

Choose menu “**Advanced**→**Forwarding**→**Virtual Servers**”, and then you can view and add virtual servers in the next screen shown in Figure 5-51. Virtual servers can be used for setting up public services on your LAN. A virtual server is defined as a service port, and all requests from Internet to this service port will be redirected to the computer specified by the server IP. Any PC that was used for a virtual server must have a static or reserved IP address because its IP address may change when using the DHCP function. If you want the Virtual Servers configuration take effect, please make sure the NAT is enabled.

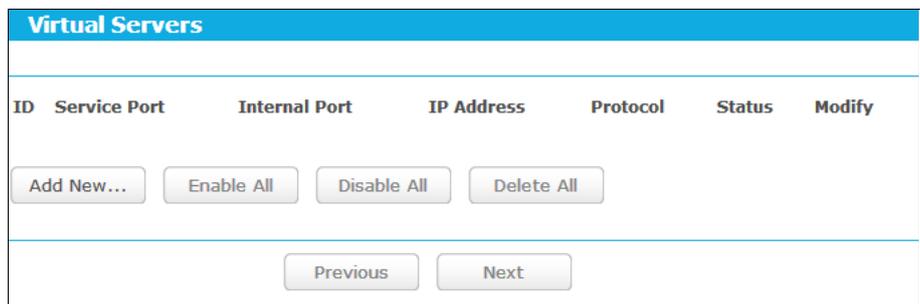

Figure 5-51 Virtual Servers

- **Service Port** - The numbers of External Service Ports. You can enter a service port or a range of service ports (the format is XXX – YYY; XXX is the Start port and YYY is the End port).
- **Internal Port** - The Internal Service Port number of the PC running the service application. You can leave it blank if the **Internal Port** is the same as the **Service Port**, or enter a specific port number when **Service Port** is a single one.
- **IP Address** - The IP address of the PC running the service application.
- **Protocol** - The protocol used for this application, either **TCP**, **UDP**, or **All** (all protocols supported by the router).
- **Status** - The status of this entry, "Enabled" means the virtual server entry is enabled.
- **Common Service Port** - Some common services already exist in the drop-down list.
- **Modify** - To modify or delete an existing entry.

To setup a virtual server entry:

1. Click the **Add New...** button.
2. Select the service you want to use from the **Common Service Port** list. If the **Common Service Port** menu does not list the service that you want to use, enter the number of the service port or service port range in the **Service Port** field.
3. Enter the IP address of the computer running the service application in the **IP Address** field.
4. Select the protocol used for this application in the **Protocol** drop-down list, either **TCP**, **UDP**, or **All**.
5. Select the **Enabled** option in the **Status** drop-down list.
6. Click the **Save** button.

The screenshot shows a web form titled "Add or Modify a Virtual Server Entry". The form contains the following fields and controls:

- Service Port:** A text input field with a placeholder "(XX-XX or XX)".
- Internal Port:** A text input field with a placeholder "(XX, Only valid for single Service Port or leave it blank)".
- IP Address:** A text input field.
- Protocol:** A dropdown menu currently set to "All".
- Status:** A dropdown menu currently set to "Enabled".
- Common Service Port:** A dropdown menu currently set to "--Select One--".

At the bottom of the form, there are two buttons: "Save" and "Back".

Figure 5-52 Add or Modify a Virtual Server Entry

Note:

It is possible that you have a computer or server that has more than one type of available service. If so, select another service, and type the same IP address for that computer or server.

To modify or delete an existing entry:

1. Find the desired entry in the table.
2. Click **Modify** or **Delete** as desired on the **Modify** column.

Click the **Enable/ Disable All** button to make all entries enabled/ disabled.

Click the **Delete All** button to delete all entries.

Click the **Next** button to go to the next page and click the **Previous** button to return to the previous page.

Note:

If you set the service port of the virtual server as 80, you must set the Web management port on **Advanced**→**Security**→**Remote Management** page to be any other value except 80 such as 8080. Otherwise there will be a conflict to disable the virtual server.

5.10.2 Port Triggering

Choose menu “**Advanced**→**Forwarding**→**Port Triggering**”, you can view and add port triggering in the next screen shown in Figure 5-53. Some applications require multiple connections, like Internet games, video conferencing, Internet telephoning and so on. Port Triggering is used for some of these applications that cannot work with a pure NAT router.

Port Triggering						
ID	Trigger Port	Trigger Protocol	Incoming Ports	Incoming Protocol	Status	Modify
<div style="display: flex; justify-content: space-around; align-items: center;"> Add New... Enable All Disable All Delete All </div>						
<div style="display: flex; justify-content: center; gap: 20px;"> Previous Next </div>						

Figure 5-53 Port Triggering

To add a new rule, follow the steps below.

1. Click the **Add New...** button, the next screen will pop-up as shown in Figure 5-54.
2. Select a common application from the **Common Applications** drop-down list, then the **Trigger Port** field and the **Incoming Ports** field will be automatically filled. If the **Common Applications** do not have the application you need, enter the **Trigger Port** and the **Incoming Ports** manually.

3. Select the protocol used for Trigger Port from the **Trigger Protocol** drop-down list, either **TCP**, **UDP**, or **All**.
4. Select the protocol used for Incoming Ports from the **Incoming Protocol** drop-down list, either **TCP** or **UDP**, or **All**.
5. Select **Enabled** in **Status** field.
6. Click the **Save** button to save the new rule.

The screenshot shows a web form titled "Add or Modify a Port Triggering Entry". The form contains the following fields and controls:

- Trigger Port:** An empty text input field.
- Trigger Protocol:** A dropdown menu with "All" selected.
- Incoming Ports:** An empty text input field.
- Incoming Protocol:** A dropdown menu with "All" selected.
- Status:** A dropdown menu with "Enabled" selected.
- Common Applications:** A dropdown menu with "--Select One--" selected.

At the bottom of the form, there are two buttons: "Save" and "Back".

Figure 5-54 Add or Modify a Triggering Entry

- **Trigger Port** - The port for outgoing traffic. An outgoing connection using this port will trigger this rule.
- **Trigger Protocol** - The protocol used for Trigger Ports, either **TCP**, **UDP**, or **All** (all protocols supported by the router).
- **Incoming Port** - The port or port range used by the remote system when it responds to the outgoing request. A response using one of these ports will be forwarded to the PC which triggered this rule. You can input at most 5 groups of ports (or port sections). Every group of ports must be separated with ",", for example, 2000-2038, 2046, 2050-2051, 2085, 3010-3030.
- **Incoming Protocol** - The protocol used for **Incoming Port**, either **TCP**, **UDP**, or **ALL** (all protocols supported by the router).
- **Status** - The status of this entry, Enabled means the Port Triggering entry is enabled.
- **Modify** - To modify or delete an existing entry.
- **Common Applications** - Some popular applications already listed in the drop-down list of **Incoming Protocol**.

To modify or delete an existing entry:

1. Find the desired entry in the table.
2. Click **Modify** or **Delete** as desired on the **Modify** column.

Click the **Enable All** button to make all entries enabled.

Click the **Disable All** button to make all entries disabled.

Click the **Delete All** button to delete all entries

Once the router is configured, the operation is as follows:

1. A local host makes an outgoing connection to an external host using a destination port number defined in the **Trigger Port** field.
2. The router records this connection, opens the incoming port or ports associated with this entry in the **Port Triggering** table, and associates them with the local host.
3. When necessary, the external host will be able to connect to the local host using one of the ports defined in the **Incoming Ports** field.

 **Note:**

1. When the trigger connection is released, the corresponding opened ports will be closed.
2. Each rule can only be used by one host on the LAN at a time. The trigger connection of other hosts on the LAN will be refused.
3. **Incoming Ports** ranges cannot overlap each other.

5.10.3 DMZ

Choose menu “**Advanced**→**Forwarding**→**DMZ**”, and then you can view and configure DMZ host in the screen shown in Figure 5-55. The DMZ host feature allows one local host to be exposed to the Internet for a special-purpose service such as Internet gaming or videoconferencing. The router forwards packets of all services to the DMZ host. Any PC whose port is being forwarded must have its DHCP client function disabled and should have a new static IP Address assigned to it because its IP Address may be changed when using the DHCP function.

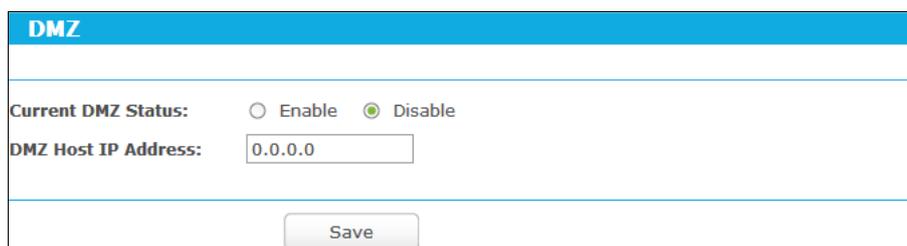

Figure 5-55 DMZ

To assign a computer or server to be a DMZ server:

1. Select the **Enable** radio button.
2. Enter the IP address of a local PC that is set to be DMZ host in the **DMZ Host IP Address** field.
3. Click the **Save** button.

5.10.4 UPnP

Choose menu “**Advanced**→**Forwarding**→**UPnP**”, and then you can view the information about **UPnP** in the screen shown in Figure 5-56. The **Universal Plug and Play (UPnP)** feature allows the devices, such as Internet computers, to access the local host resources or devices as needed. UPnP devices can be automatically discovered by the UPnP service application on the LAN.

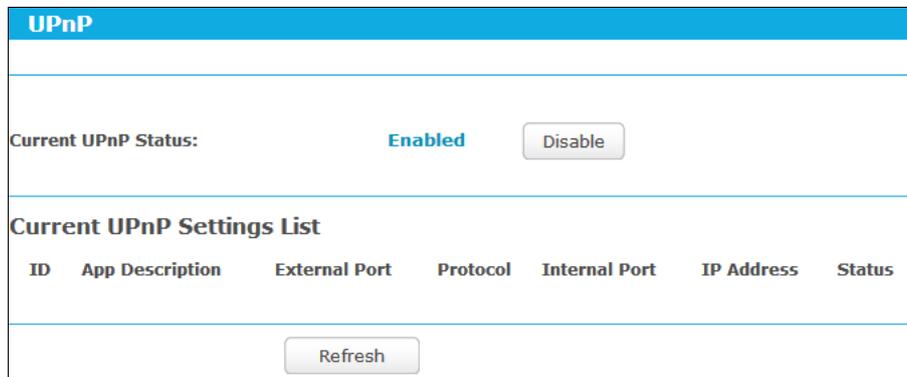

Figure 5-56 UPnP Setting

- **Current UPnP Status** - UPnP can be enabled or disabled by clicking the **Enable** or **Disable** button. This feature is enabled by default.
- **Current UPnP Settings List** - This table displays the current UPnP information.
 - **App Description** - The description about the application which initiates the UPnP request.
 - **External Port** - The port which the router opened for the application.
 - **Protocol** - The type of protocol which is opened.
 - **Internal Port** - The port which the router opened for local host.
 - **IP Address** - The IP address of the local host which initiates the UPnP request.
 - **Status** - Either Enabled or Disabled. "Enabled" means that the port is still active; otherwise, the port is inactive.

Click the **Enable** button to enable UPnP.

Click the **Disable** button to disable UPnP.

Click the **Refresh** button to update the Current UPnP Settings List.

5.11 Security

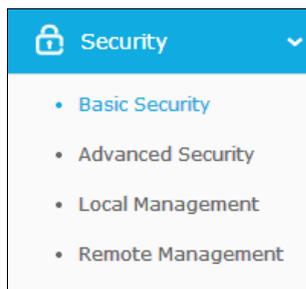

Figure 5-57 The Security menu

There are four submenus under the Security menu: **Basic Security**, **Advanced Security**, **Local Management** and **Remote Management**. Click any of them, and you will be able to configure the corresponding functions.

5.11.1 Basic Security

Choose menu “**Advanced**→**Security**→**Basic Security**”, and then you can configure the basic security in the screen as shown in Figure 5-58.

Basic Security	
Firewall	
SPI Firewall:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
VPN	
PPTP Passthrough:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
L2TP Passthrough:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
IPSec Passthrough:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
ALG	
FTP ALG:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
TFTP ALG:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
H323 ALG:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
RTSP ALG:	<input checked="" type="radio"/> Enable <input type="radio"/> Disable
Save	

Figure 5-58 Basic Security

- **Firewall** - A firewall protects your network from the outside world. Here you can enable or disable the router’s firewall.
 - **SPI Firewall** - SPI (Stateful Packet Inspection, also known as dynamic packet filtering) helps to prevent cyber attacks by tracking more state per session. It validates that the traffic passing through the session conforms to the protocol. SPI Firewall is enabled by factory default. If you want all the computers on the LAN exposed to the outside world, you can disable it.

- **VPN** - VPN Passthrough must be enabled if you want to allow VPN tunnels using VPN protocols to pass through the router.
 - **PPTP Passthrough** - Point-to-Point Tunneling Protocol (PPTP) allows the Point-to-Point Protocol (PPP) to be tunneled through an IP network. To allow PPTP tunnels to pass through the router, click **Enable**.
 - **L2TP Passthrough** - Layer Two Tunneling Protocol (L2TP) is the method used to enable Point-to-Point sessions via the Internet on the Layer Two level. To allow L2TP tunnels to pass through the router, click **Enable**.
 - **IPSec Passthrough** - Internet Protocol security (IPSec) is a suite of protocols for ensuring private, secure communications over Internet Protocol (IP) networks, through the use of cryptographic security services. To allow IPSec tunnels to pass through the router, click **Enable**.

- **ALG** - It is recommended to enable Application Layer Gateway (ALG) because ALG allows customized Network Address Translation (NAT) traversal filters to be plugged into the gateway to support address and port translation for certain application layer "control/data" protocols such as FTP, TFTP, H323 etc.
 - **FTP ALG** - To allow FTP clients and servers to transfer data across NAT, click **Enable**.
 - **TFTP ALG** - To allow TFTP clients and servers to transfer data across NAT, click **Enable**.
 - **H323 ALG** - To allow Microsoft NetMeeting clients to communicate across NAT, click **Enable**.
 - **RTSP ALG** - To allow some media player clients to communicate with some streaming media servers across NAT, click **Enable**.

Click the **Save** button to save your settings.

5.11.2 Advanced Security

Choose menu "**Advanced**→**Security**→**Advanced Security**", and then you can protect the router from being attacked by TCP-SYN Flood, UDP Flood and ICMP-Flood in the screen as shown in Figure 5-59.

Figure 5-59 Advanced Security

- **Packets Statistics Interval (5~60)** - The default value is 10. Select a value between 5 and 60 seconds from the drop-down list. The Packets Statistics Interval value indicates the time section of the packets statistics. The result of the statistics is used for analysis by SYN Flood, UDP Flood and ICMP-Flood.
 - **DoS Protection** - Denial of Service protection. Check the Enable or Disable button to enable or disable the DoS protection function. Only when it is enabled, will the flood filters be enabled.
- Note:**
- Dos Protection will take effect only when the **Current Statistics Status** in “**Advanced→System Tools→Statistics**” is enabled.
- **Enable ICMP-FLOOD Attack Filtering** - Enable or Disable the ICMP-FLOOD Attack Filtering.
 - **ICMP-FLOOD Packets Threshold (5~3600)** - The default value is 50. Enter a value between 5 ~ 3600. When the current ICMP-FLOOD Packets number is beyond the set value, the router will startup the blocking function immediately.
 - **Enable UDP-FLOOD Filtering** - Enable or Disable the UDP-FLOOD Filtering.

- **UDP-FLOOD Packets Threshold (5~3600)** - The default value is 500. Enter a value between 5 ~ 3600. When the current UPD-FLOOD Packets number is beyond the set value, the router will startup the blocking function immediately.
- **Enable TCP-SYN-FLOOD Attack Filtering** - Enable or Disable the TCP-SYN-FLOOD Attack Filtering.
- **TCP-SYN-FLOOD Packets Threshold (5~3600)** - The default value is 50. Enter a value between 5 ~ 3600. When the current TCP-SYN-FLOOD Packets numbers is beyond the set value, the router will startup the blocking function immediately.
- **Ignore Ping Packet From WAN Port** - Enable or Disable Ignore Ping Packet From WAN Port. The default setting is disabled. If enabled, the ping packet from the Internet cannot access the router.
- **Forbid Ping Packet From LAN Port** - Enable or Disable Forbid Ping Packet From LAN Port. The default setting is disabled. If enabled, the ping packet from LAN cannot access the router. This function can be used to defend against some viruses.

Click the **Save** button to save the settings.

Click the **Blocked DoS Host List** button to display the DoS host table by blocking.

5.11.3 Local Management

Choose menu “**Advanced→Security→Local Management**”, and then you can configure the management rule in the screen as shown in Figure 5-60. The management feature allows you to deny computers in LAN from accessing the router.

Figure 5-60 Local Management

By default, the radio button “**All the PCs on the LAN are allowed to access the router's Web-Based Utility**” is checked. If you want to allow PCs with specific MAC Addresses to access the Setup page of the router's Web-Based Utility locally from inside the network, check the radio button “**Only the PCs listed can browse the built-in web pages to perform Administrator**”

tasks", and then enter each MAC Address in a separate field. The format for the MAC Address is XX-XX-XX-XX-XX-XX (X is any hexadecimal digit). Only the PCs with MAC address listed can use the password to browse the built-in web pages to perform Administrator tasks while all the others will be blocked.

After click the **Add** button, your PC's MAC Address will be placed in the list above.

Click the **Save** button to save your settings.

 **Note:**

If your PC is blocked but you want to access the router again, use a pin to press and hold the **WPS/Reset** button (hole) on the back panel for about 5 seconds to reset the router's factory defaults on the router's Web-Based Utility.

5.11.4 Remote Management

Choose menu "**Advanced**→**Security**→**Remote Management**", and then you can configure the Remote Management function in the screen as shown in Figure 5-61. This feature allows you to manage your router from a remote location via the Internet.

Remote Management	
Web Management Port:	<input type="text" value="80"/>
Remote Management IP Address:	<input type="text" value="0.0.0.0"/> (Enter 255.255.255.255 for all)
<input type="button" value="Save"/>	

Figure 5-61 Remote Management

- **Web Management Port** - Web browser access normally uses the standard HTTP service port 80. This router's default remote management web port number is 80. For greater security, you can change the remote management web port to a custom port by entering that number in the box provided. Choose a number between 1 and 65534 but do not use the number of any common service port.
- **Remote Management IP Address** - This is the current address you will use when accessing your router from the Internet. This function is disabled when the IP address is set to the default value of 0.0.0.0. To enable this function change 0.0.0.0 to a valid IP address. If set to 255.255.255.255, then all the hosts can access the router from internet.

 **Note:**

1. To access the router, you should type your router's WAN IP address into your browser's address (in IE) or Location (in Navigator) box, followed by a colon and the custom port number. For example, if your router's WAN address is 202.96.12.8, and the port number used is 8080, please enter `http://202.96.12.8:8080` in your browser. Later, you may be asked for the router's password. After successfully entering the username and password, you will be able to access the router's web-based utility.

2. Be sure to change the router's default password to a very secure password.

5.12 Parental Control

Choose menu “**Advanced**→**Parental Control**”, and then you can configure the parental control in the screen as shown in Figure 5-62. The Parental Control function can be used to control the internet activities of the child, limit the child to access certain websites and restrict the time of surfing.

Figure 5-62 Parental Control Settings

- **Parental Control** - Check **Enable** if you want this function to take effect; otherwise, check **Disable**.
- **MAC Address of Parental PC** - In this field, enter the MAC address of the controlling PC, or you can make use of the **Copy To Above** button below.
- **MAC Address of Your PC** - This field displays the MAC address of the PC that is managing this router. If the MAC Address of your adapter is registered, you can click the **Copy To Above** button to fill this address to the MAC Address of Parental PC field above.
- **Website Description** - Description of the allowed website for the PC controlled.
- **Schedule** - The time period allowed for the PC controlled to access the Internet. For detailed information, please go to “**Advanced**→**Access Control**→**Schedule**”.
- **Status** - Check to enable the corresponding entry.
- **Modify** - Here you can edit or delete an existing entry.

To add a new entry, please follow the steps below.

1. Click the **Add New...** button and the next screen will pop-up as shown in Figure 5-63.

Figure 5-63 Add or Modify Parental Control Entry

2. Enter the MAC address of the PC (e.g. 00-11-22-33-44-AA) you'd like to control in the **MAC Address of Child PC** field, or you can choose the MAC address from the **All Address in Current LAN** drop-down list.
3. Give a description (e.g. Allow Google) for the website allowed to be accessed in the **Website Description** field.
4. Enter the allowed website name, e.g. www.google.com.
5. Select the schedule (e.g. Schedule_1) you want from the Effective Time drop-down list. If there are not suitable schedules for you, please go to "Access Control->Schedule" page to create the schedule you need.
6. In the Status field, you can select **Enabled** or **Disabled** to enable or disable your entry.
7. Click the **Save** button.

Click the **Enable All** button to enable all the rules in the list.

Click the **Disable All** button to disable all the rules in the list.

Click the **Delete All** button to delete all the entries in the table.

Click the **Next** button to go to the next page, or click the **Previous** button to return to the previous page.

For example: If you desire that the child PC with MAC address 00-11-22-33-44-AA can access www.google.com on Saturday only, while the parent PC with MAC address 00-11-22-33-44-BB is without any restriction, you should follow the settings below.

1. Click **“Parental Control”** menu on the left to enter the Parental Control Settings page. Check **Enable** and enter the MAC address 00-11-22-33-44-BB in the MAC Address of Parental PC field.
2. Click **“Advanced→Access Control→Schedule”** on the left to enter the Schedule Settings page. Click **Add New...** button to create a new schedule with Schedule Description is Schedule_1, Day is Sat and Time is all day-24 hours.
3. Click **“Parental Control”** menu on the left to go back to the Add or Modify Parental Control Entry page:
 - 1) Click **Add New...** button.
 - 2) Enter 00-11-22-33-44-AA in the **MAC Address of Child PC** field.
 - 3) Enter “Allow Google” in the **Website Description** field.
 - 4) Enter “www.google.com” in the **Allowed Website Name** field.
 - 5) Select “Schedule_1” you create just now from the **Effective Time** drop-down list.
 - 6) In **Status** field, select **Enable**.
4. Click **Save** to complete the settings.

Then you will go back to the **Parental Control Settings** page and see the following list.

ID	MAC address	Website Description	Schedule	Status	Modify
1	00-11-22-33-44-AA	Allow Google	Schedule_1	<input checked="" type="checkbox"/>	Edit Delete

5.13 Access Control

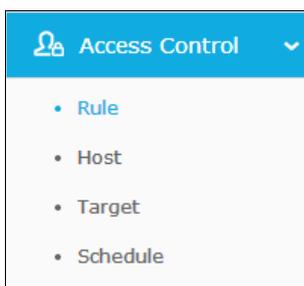

Figure 5-64 Access Control

There are four submenus under the Access Control menu as shown in Figure 5-64: **Rule**, **Host**, **Target** and **Schedule**. Click any of them, and you will be able to configure the corresponding function.

5.13.1 Rule

Choose menu “**Advanced**→**Access Control**→**Rule**”, and then you can view and set Access Control rules in the screen as shown in Figure 5-65.

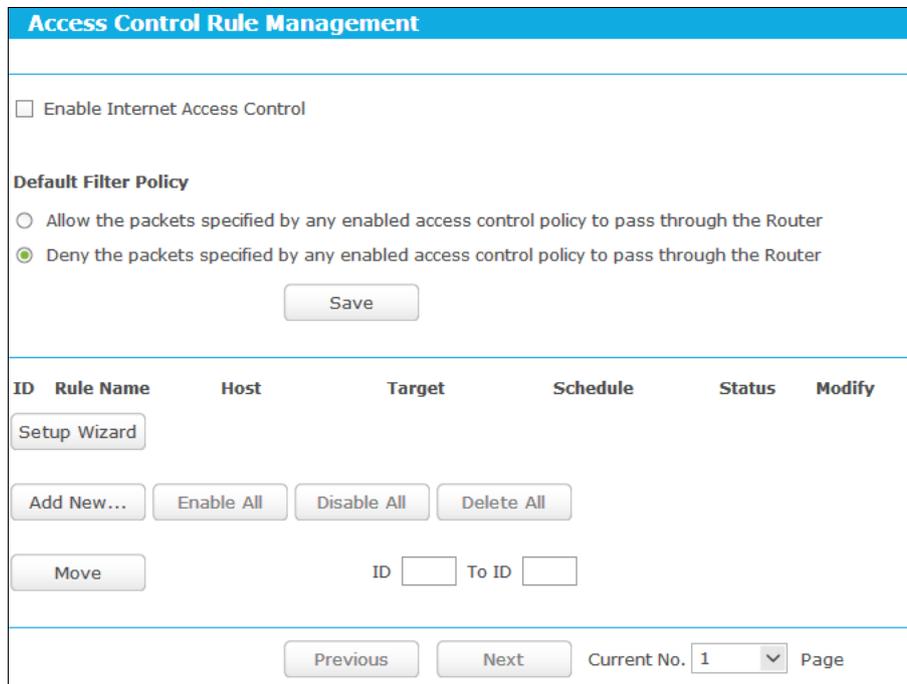

Figure 5-65 Access Control Rule Management

- **Enable Internet Access Control** - Select the checkbox to enable the Internet Access Control function, so the Default Filter Policy can take effect.
- **Rule Name** - Displays the name of the rule and this name is unique.
- **Host** - Displays the host selected in the corresponding rule.
- **Target** - Displays the target selected in the corresponding rule.
- **Schedule** - Displays the schedule selected in the corresponding rule.
- **Status** - Displays the status of the rule, enabled or not. Select the corresponding checkbox to enable the entry.
- **Modify** - Here you can edit or delete an existing rule.
- **Setup Wizard** - Click the **Setup Wizard** button to create a new rule entry.
- **Add New...** - Click the **Add New...** button to add a new rule entry.
- **Enable All** - Click the **Enable All** button to enable all the rules in the list.
- **Disable All** - Click the **Disable All** button to disable all the rules in the list.
- **Delete All** - Click the **Delete All** button to delete all the entries in the table.

- **Move** - You can change the entry's order as desired. Enter in the first box the ID number of the entry you want to move and in the second box another ID number, and then click the **Move** button to change the entries' order.

Click the **Next** button to go to the next page.

Click the **Previous** button to return to the previous page.

There are two methods to add a new rule.

Method One:

1. Click **Setup Wizard** button and the next screen will appear as shown in Figure 5-66.

Figure 5-66 Quick Setup – Create a Host Entry

- **Host Description** - In this field, create a unique description for the host (e.g. Host_1).
 - **Mode** - Here are two options, **IP Address** and **MAC Address**. You can select either of them from the drop-down list.

If the **IP Address** is selected, you can see the following item:
 - **LAN IP Address** - Enter the IP address or address range of the host in dotted-decimal format (e.g. 192.168.0.23).

If the MAC Address is selected, you can see the following item:
 - **MAC Address** - Enter the MAC address of the host in XX-XX-XX-XX-XX-XX format (e.g. 00-11-22-33-44-AA).
2. Click **Next** when finishing creating the host entry. The next screen will appear as shown in Figure 5-67.

The screenshot shows a web form titled "Quick Setup - Create an Access Target Entry". The form contains the following fields and controls:

- Mode:** A dropdown menu with "IP Address" selected.
- Target Description:** A single-line text input field.
- IP Address:** Two text input fields separated by a hyphen, for entering an IP address range.
- Target Port:** Two text input fields separated by a hyphen, for entering a port range.
- Protocol:** A dropdown menu with "All" selected.
- Common Service Port:** A dropdown menu with "--Please Select--" selected.

At the bottom of the form, there are two buttons: "Back" and "Next".

Figure 5-67 Quick Setup – Create an Access Target Entry

- **Target Description** - In this field, create a description for the target. Note that this description should be unique (e.g. Target_1).
- **Mode** - Here are two options, IP Address and Domain Name. You can choose either of them from the drop-down list.

If the **IP Address** is selected, you will see the following items:

- **IP Address** - Enter the IP address (or address range) of the target (targets) in dotted-decimal format (e.g. 192.168.0.33).
- **Target Port** - Specify the port or port range for the target. For some common service ports, you can make use of the Common Service Port item below.
- **Protocol** - Here are four options, All, TCP, UDP, and ICMP. Select one of them from the drop-down list for the target.
- **Common Service Port** - Lists some common service ports. Select one from the drop-down list and the corresponding port number will be filled in the Target Port field automatically. For example, if you select "FTP", "21" will be filled in the Target Port automatically.

If the **Domain Name** is selected, you will see the following items:

- **Domain Name** - Here you can enter 4 domain names, either the full name or the keywords (for example, google). Any domain name with keywords in it (www.google.com, www.google.cn) will be blocked or allowed.
3. Click **Next** when finishing creating the access target entry, and the next screen will appear as shown in Figure 5-68.

Figure 5-68 Quick Setup – Create an Advanced Schedule Entry

- **Schedule Description** - In this field, create a description for the schedule. Note that this description should be unique (e.g. Schedule_1).
 - **Day** - Choose Select Days and select the certain day (days), or choose Everyday.
 - **Time** - Select "all day-24 hours" checkbox, or deselect the checkbox and specify the Start Time and Stop Time manually.
 - **Start Time** - Enter the start time in HHMM format (HHMM are 4 numbers). For example 0800 is 8:00.
 - **Stop Time** - Enter the stop time in HHMM format (HHMM are 4 numbers). For example 2000 is 20:00.
4. Click **Next** when finishing creating the advanced schedule entry. The next screen will appear as shown in Figure 5-69.

Figure 5-69 Quick Setup – Create an Internet Access Control Entry

- **Rule Name** - In this field, create a name for the rule. Note that this name should be unique (e.g. Rule_1).
- **Host** - In this field, select a host from the drop-down list for the rule. The default value is the **Host Description** you set just now.

- **Target** - In this field, select a target from the drop-down list for the rule.
 - **Schedule** - In this field, select a schedule from the drop-down list for the rule.
 - **Status** - In this field, there are two options, **Enabled** or **Disabled**. Select **Enabled** so that the rule will take effect. Select **Disabled** so that the rule won't take effect.
5. Click **Finish** to complete adding a new rule.

Method Two:

1. Click the **Add New...** button and the next screen will pop up as shown in Figure 5-70.
2. Give a name (e.g. Rule_1) for the rule in the **Rule Name** field.
3. Select a host from the **Host** drop-down list or choose “**Click Here To Add New Host List**”.
4. Select a target from the **Target** drop-down list or choose “**Click Here To Add New Target List**”.
5. Select a schedule from the **Schedule** drop-down list or choose “**Click Here To Add New Schedule**”.
6. In the **Status** field, select **Enabled** or **Disabled** to enable or disable your entry.
7. Click the **Save** button.

Figure 5-70 Add Internet Access Control Entry

For example: If you desire to allow the host with MAC address 00-11-22-33-44-AA to access www.google.com only from 18:00 to 20:00 on Saturday and Sunday, and forbid other hosts in the LAN to access the Internet, you should follow the settings below:

1. Click the menu **Access Control** on the left. Select **Enable Internet Access Control** and choose "**Allow the packets specified by any enabled access control policy to pass through the router**".
2. Click **Setup Wizard** button.
3. Add a new host with the Host Description is Host_1 and MAC Address is 00-11-22-33-44-AA, and click **Next**.

4. Add a new target with the Target Description is Target_1 and Domain Name is www.google.com, and click **Next**.
5. Add a new schedule with the Schedule Description is Schedule_1, Day is Sat and Sun, Start Time is 1800 and Stop Time is 2000, and click **Next**.
6. Add a new rule with the Rule Description is Rule_1, Host is Host_1, Target is Target_1, Schedule is Schedule_1, Status is Enabled, and click **Finish**.

Then you will go back to the Access Control Rule Management page and see the following list.

ID	Rule Name	Host	Target	Schedule	Status	Modify
1	Rule_1	Host_1	Target_1	Schedule_1...	<input checked="" type="checkbox"/>	Edit Delete

5.13.2 Host

Choose menu “**Advanced**→**Access Control**→**Host**”, and then you can view and set a Host list in the screen as shown in Figure 5-71. The host list is necessary for the Access Control Rule.

Host Settings			
ID	Host Description	Information	Modify
1	Host_1	MAC: 00-11-22-33-44-AA	Edit Delete
<input type="button" value="Add New..."/> <input type="button" value="Delete All"/>			
<input type="button" value="Previous"/> <input type="button" value="Next"/> Current No. <input type="text" value="1"/> <input type="button" value="v"/> Page			

Figure 5-71 Host Settings

- **Host Description** - Displays the description of the host and this description is unique.
- **Information** - Displays the information about the host. It can be IP or MAC.
- **Modify** - To modify or delete an existing entry.

To add a new entry, please follow the steps below.

1. Click the **Add New...** button.
2. In the **Mode** field, select IP Address or MAC Address.
 - 1) If you select IP Address, the screen is shown as Figure 5-72.
 - In **Host Description** field, create a unique description for the host, e.g. Host_1.
 - In **LAN IP Address** field, enter the IP address.

The screenshot shows a web form titled "Add or Modify a Host Entry". It has a blue header bar with the title. Below the header, there are three fields: "Mode:" with a dropdown menu set to "IP Address", "Host Description:" with a text input field containing "Host_1", and "LAN IP Address:" with two text input fields containing "192.168.0.2" and "192.168.0.22" separated by a hyphen. At the bottom of the form are two buttons: "Save" and "Back".

Figure 5-72 Add or Modify a Host Entry

2) If you select MAC Address, the screen is shown as Figure 5-73.

- In **Host Description** field, create a unique description for the host, e.g. Host_1.
- In **MAC Address** field, enter the MAC address.

The screenshot shows the same "Add or Modify a Host Entry" form, but with the "Mode:" dropdown menu set to "MAC Address". The "Host Description:" field still contains "Host_1". The "MAC Address:" field has a text input field containing "00-11-22-33-44-AA". The "Save" and "Back" buttons are still present at the bottom.

Figure 5-73 Add or Modify a Host Entry

3. Click the **Save** button to complete the settings.

Click the **Delete All** button to delete all the entries in the table.

Click the **Next** button to go to the next page, or click the **Previous** button to return to the previous page.

For example: If you desire to restrict the internet activities of host with MAC address 00-11-22-33-44-AA, you should first follow the settings below:

1. Click **Add New...** button in Figure 5-71 to enter the Add or Modify a Host Entry page.
2. In **Mode** field, select MAC Address from the drop-down list.
3. In **Host Description** field, create a **unique** description for the host (e.g. Host_1).
4. In **MAC Address** field, enter 00-11-22-33-44-AA.
5. Click **Save** to complete the settings.

Then you will go back to the Host Settings page and see the following list.

ID	Host Description	Information	Modify
1	Host_1	MAC: 00-11-22-33-44-AA	Edit Delete

5.13.3 Target

Choose menu “**Advanced**→**Access Control**→**Target**”, and then you can view and set a Target list in the screen as shown in Figure 5-74. The target list is necessary for the Access Control Rule.

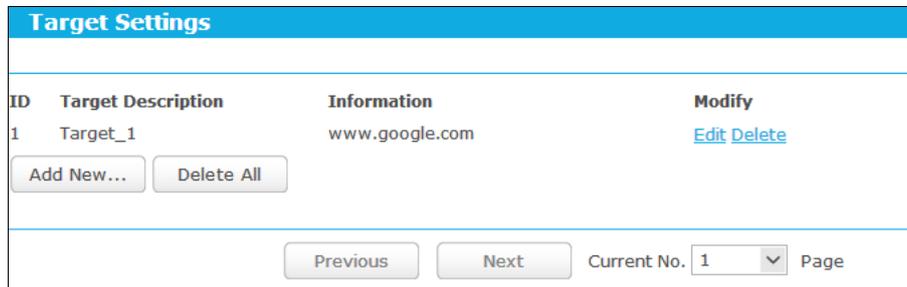

Figure 5-74 Target Settings

- **Target Description** - Displays the description about the target and this description is unique.
- **Information** - The target can be IP address, port, or domain name.
- **Modify** - To modify or delete an existing entry.

To add a new entry, please follow the steps below.

1. Click the **Add New...** button.
2. In Mode field, select **IP Address** or **Domain Name**.
3. If you select **IP Address**, the screen is shown as Figure 5-75.

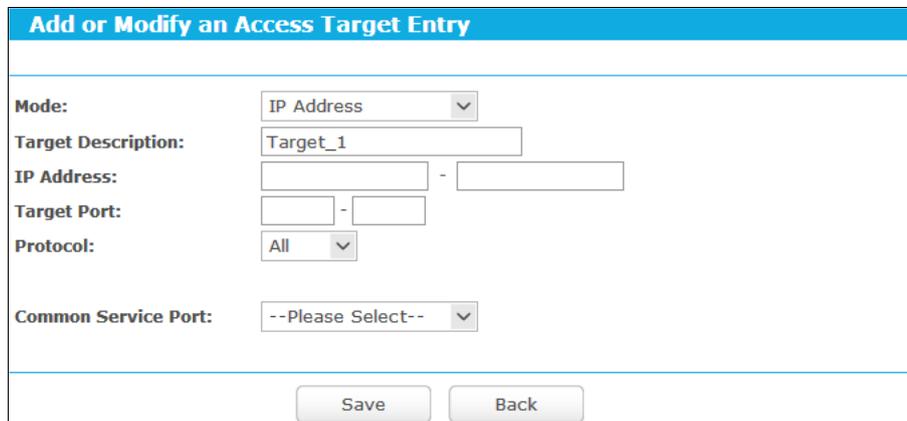

Figure 5-75 Add or Modify an Access Target Entry

- 1) In **Target Description** field, create a unique description for the target, e.g. Target_1.
 - 2) In **IP Address** field, enter the IP address of the target.
 - 3) Select a common service from **Common Service Port** drop-down list, so that the **Target Port** will be automatically filled. If the **Common Service Port** drop-down list doesn't have the service you want, specify the **Target Port** manually.
 - 4) In **Protocol** field, select TCP, UDP, ICMP or ALL from the drop-down list.
4. If you select **Domain Name**, the screen is shown as Figure 5-76.

Figure 5-76 Add or Modify an Access Target Entry

- 1) In **Target Description** field, create a unique description for the target, e.g. Target_1.
 - 2) In **Domain Name** field, enter the domain name, either the full name or the keywords (e.g. google) in the blank. Any domain name with keywords in it (www.google.com, www.google.cn) will be blocked or allowed. You can enter 4 domain names.
5. Click the **Save** button.

Click the **Delete All** button to delete all the entries in the table.

Click the **Next** button to go to the next page, or click the **Previous** button to return to the previous page.

For example: If you desire to restrict the internet activities of host with MAC address 00-11-22-33-44-AA in the LAN to access **www.google.com** only, you should first follow the settings below:

1. Click **Add New...** button in Figure 5-74.
2. In **Mode** field, select Domain Name from the drop-down list.
3. In **Target Description** field, create a unique description for the target, e.g. Target_1.
4. In **Domain Name** field, enter www.google.com.
5. Click **Save** to complete the settings.

Then you will go back to the Target Settings page and see the following list.

ID	Target Description	Information	Modify
1	Target_1	www.google.com	Edit Delete

5.13.4 Schedule

Choose menu “**Advanced**→**Access Control**→**Schedule**”, and then you can view and set a schedule in the next screen as shown in Figure 5-77. The schedule is necessary for the Access Control Rule.

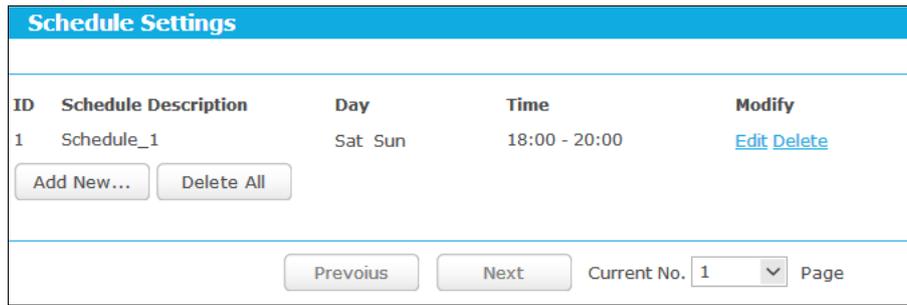

Figure 5-77 Schedule Settings

- **Schedule Description** - Displays the description of the schedule and this description is unique.
- **Day** - Displays the day(s) in a week.
- **Time** - Displays the time period in a day.
- **Modify** - Here you can edit or delete an existing schedule.

To add a new schedule, follow the steps below:

1. Click **Add New...** button shown in Figure 5-77 and the next screen will pop-up as shown in Figure 5-78.
2. In **Schedule Description** field, create a unique description for the schedule, e.g. Schedule_1.
3. In **Day** field, select the day or days you need.
4. In **Time** field, you can select all day-24 hours or you may enter the Start Time and Stop Time in the corresponding field.
5. Click **Save** to complete the settings.

Click the **Delete All** button to delete all the entries in the table.

Click the **Next** button to go to the next page, or click the **Previous** button to return to the previous page.

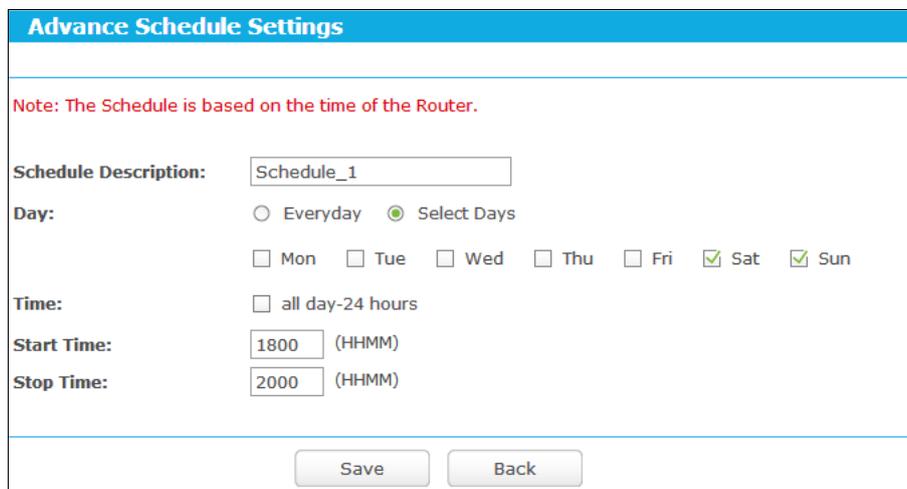

Figure 5-78 Advanced Schedule Settings

For example: If you desire to restrict the internet activities of host with MAC address 00-11-22-33-44-AA to access www.google.com only from **18:00 to 20:00** on **Saturday** and **Sunday**, you should first follow the settings below:

1. Click **Add New...** button shown in Figure 5-77 to enter the Advanced Schedule Settings page.
2. In **Schedule Description** field, create a unique description for the schedule, e.g. Schedule_1.
3. In **Day** field, check the Select Days radio button and then select Sat and Sun.
4. In **Time** field, enter 1800 in Start Time field and 2000 in Stop Time field.
5. Click **Save** to complete the settings.

Then you will go back to the Schedule Settings page and see the following list.

ID	Schedule Description	Day	Time	Modify
1	Schedule_1	Sat Sun	18:00 - 20:00	Edit Delete

5.14 Advanced Routing

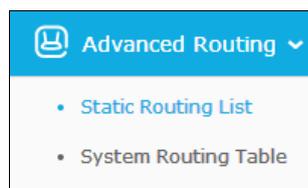

Figure 5-79 Advanced Routing

There are two submenus under the Advanced Routing menu as shown in Figure 5-79: **Static Routing List** and **System Routing Table**. Click any of them, and you will be able to configure the corresponding function.

5.14.1 Static Routing List

Choose menu “**Advanced**→**Advanced Routing**→**Static Routing List**”, and then you can configure the static route in the next screen (shown in Figure 5-80). A static route is a pre-determined path that network information must travel to reach a specific host or network.

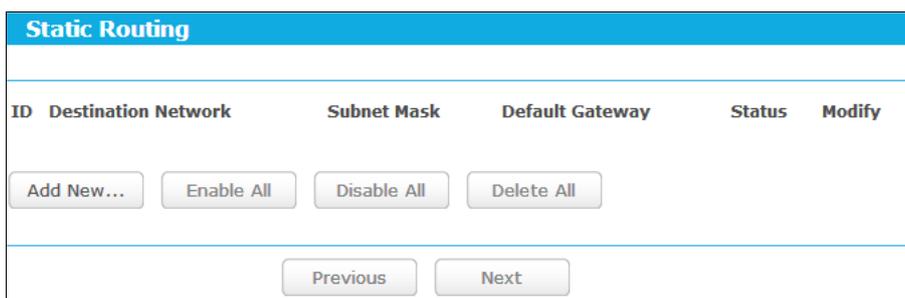

Figure 5-80 Static Routing

To add static routing entries:

1. Click **Add New...** shown in Figure 5-80, you will see the following screen.

Figure 5-81 Add or Modify a Static Route Entry

2. Enter the following data:
 - **Destination Network** - The Destination Network is the address of the network or host that you want to assign to a static route.
 - **Subnet Mask** - The **Subnet Mask** determines which portion of an IP Address is the network portion, and which portion is the host portion.
 - **Default Gateway** - This is the IP Address of the gateway device that allows for contact between the router and the network or host.
3. Select **Enabled** or **Disabled** for this entry on the **Status** drop-down list.
4. Click the **Save** button to make the entry take effect.

Other configurations for the entries:

Click the **Delete** button to delete the entry.

Click the **Enable All** button to enable all the entries.

Click the **Disable All** button to disable all the entries.

Click the **Delete All** button to delete all the entries.

Click the **Previous** button to view the information in the previous screen, click the **Next** button to view the information in the next screen.

5.14.2 System Routing Table

Choose menu “**Advanced**→**Advanced Routing**→**System Routing Table**”, and then you can view the System Routing Table in the next screen (shown in Figure 5-82). System routing table views all of the valid route entries in use. The Destination IP address, Subnet Mask, Gateway, and Interface will be displayed for each entry.

System Routing Table				
ID	Destination Network	Subnet Mask	Gateway	Interface
1	192.168.0.0	255.255.255.0	0.0.0.0	LAN & WLAN

Refresh

Figure 5-82 System Routing Table

- **Destination Network** - The Destination Network is the address of the network or host to which the static route is assigned.
- **Subnet Mask** - The Subnet Mask determines which portion of an IP address is the network portion, and which portion is the host portion.
- **Gateway** - This is the IP address of the gateway device that allows for contact between the router and the network or host.
- **Interface** - This interface tells you either the Destination IP Address is on the **LAN & WLAN** (internal wired and wireless networks), or on the **WAN** (Internet).

5.15 Bandwidth Control

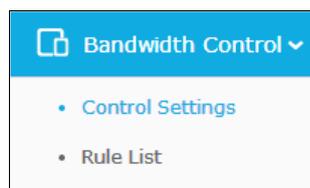

Figure 5-83 Bandwidth Control

There are two submenus under the Bandwidth Control menu as shown in Figure 5-83: **Control Settings** and **Rules List**. Click any of them, and you will be able to configure the corresponding function. The detailed explanations for each submenu are provided below.

 **Note:**

Bandwidth Control will become invalid if NAT Boost is enabled. If you want to enable Bandwidth Control, please go to “**Advanced**→**NAT Boost**” to disable NAT Boost first.

5.15.1 Control Settings

Choose menu “**Advanced** → **Bandwidth Control** → **Control Settings**”, and then you can configure the Egress Bandwidth and Ingress Bandwidth in the next screen. For optimal control of the bandwidth, please select the right Line Type and ask your ISP for the total bandwidth of the egress and ingress.

Figure 5-84 Bandwidth Control Settings

- **Enable Bandwidth Control** - Select this checkbox so that the Bandwidth Control settings can take effect.
- **Line Type** - Select the right type for you network connection. If you don't know how to choose, please ask your ISP for the information.
- **Egress Bandwidth** - The upload speed through the Internet port.
- **Ingress Bandwidth** - The download speed through the Internet port.

5.15.2 Rules List

Choose menu “**Advanced**→**Bandwidth Control**→**Rules List**”, and then you can view and configure the Bandwidth Control rules in the screen below.

Figure 5-85 Bandwidth Control Rules List

- **Description** - This is the information about the rules such as address range.
- **Egress bandwidth** - This field displays the max and mix upload bandwidth through the Internet port, the default is 0.
- **Ingress bandwidth** - This field displays the max and mix download bandwidth through the Internet port, the default is 0.
- **Enable** - This displays the status of the rule.
- **Modify** - Click **Modify** to edit the rule. Click **Delete** to delete the rule.

To add/modify a Bandwidth Control rule, follow the steps below.

1. Click **Add New...** shown in Figure 5-85, you will see a new screen shown in Figure 5-86.
2. Enter the information like the screen shown below.

Figure 5-86 Bandwidth Control Rule Settings

3. Click the **Save** button.

5.16 IP & MAC Binding

Figure 5-87 the IP & MAC Binding menu

There are two submenus under the IP &MAC Binding menu, shown in Figure 5-87: **Binding Settings** and **ARP List**. Click any of them, and you will be able to scan or configure the corresponding function. The detailed explanations for each submenu are provided below.

5.16.1 Binding Settings

Choose menu “**Advanced**→**IP & MAC Binding**→**Binding Settings**”, you can configure the IP & MAC binding rules in the screen as shown in Figure 5-88.

Figure 5-88 Binding Setting

- **MAC Address** - The MAC address of the controlled computer in the LAN.
- **IP Address** - The assigned IP address of the controlled computer in the LAN.
- **Bind** - Check this option to enable ARP binding for a specific device.
- **Modify** - To modify or delete an existing entry.

When you want to add or modify an IP & MAC Binding entry, you can click the **Add New...** button or **Modify** button, and then you will go to the next page. This page is used for adding or modifying an IP & MAC Binding entry, shown in Figure 5-89.

Figure 5-89 IP & MAC Binding Setting (Add & Modify)

To add IP & MAC Binding entries, follow the steps below.

1. Click the **Add New...** button as shown in Figure 5-88.
2. Enter the MAC Address and IP Address.
3. Select the Bind checkbox.
4. Click the **Save** button to save it.

To modify or delete an existing entry, follow the steps below.

1. Find the desired entry in the table.
2. Click **Modify** or **Delete** as desired on the **Modify** column.

To find an existing entry, follow the steps below.

1. Click the **Find** button in Figure 5-88.
2. Enter the MAC Address or IP Address.
3. Click the **Find** button in Figure 5-90.

Find IP & MAC Binding Entry				
MAC Address:	<input type="text" value="00-11-22-33-44-BB"/>			
IP Address:	<input type="text"/>			
ID	MAC Address	IP Address	Bind	Link
Now the current list is empty.				
<input type="button" value="Find"/>		<input type="button" value="Back"/>		

Figure 5-90 Find IP & MAC Binding Entry

Click the **Enable All** button to make all entries enabled.

Click the **Delete All** button to delete all entries.

5.16.2 ARP List

Choose menu “**Advanced→IP & MAC Binding→ARP List**”, you can see the ARP List, showing all the existing IP & MAC Binding entries as shown in Figure 5-91. To manage the computer, you could observe the computers in the LAN by checking the relationship of MAC address and IP address on the ARP list, and you could also configure the items on the ARP list.

ARP List				
ID	MAC Address	IP Address	Status	Configure
1	00-11-22-33-44-BB	192.168.0.111	Bound	Load Delete
2	50-E5-49-1E-06-80	192.168.0.254	Unbound	Load Delete
<input type="button" value="Bind All"/>		<input type="button" value="Load All"/>		<input type="button" value="Refresh"/>

Figure 5-91 ARP List

1. **MAC Address** - The MAC address of the controlled computer in the LAN.
2. **IP Address** - The assigned IP address of the controlled computer in the LAN.
3. **Status** - Indicates whether or not the MAC and IP addresses are bound.
4. **Configure** - Load or delete an item.
 - **Load** - Load the item to the IP & MAC Binding list.
 - **Delete** - Delete the item.

Click the **Bind All** button to bind all the current items, available after enable.

Click the **Load All** button to load all items to the IP & MAC Binding list.

Click the **Refresh** button to refresh all items.

Note:

An item could not be loaded to the IP & MAC Binding list if the IP address of the item has been loaded before. Error warning will prompt as well. Likewise, "Load All" only loads the items without interference to the IP & MAC Binding list.

5.17 Dynamic DNS

Choose menu "Dynamic DNS", and you can configure the Dynamic DNS function.

The router offers the **DDNS** (Dynamic Domain Name System) feature, which allows the hosting of a website, FTP server, or e-mail server with a fixed domain name (named by yourself) and a dynamic IP address, and then your friends can connect to your server by entering your domain name no matter what your IP address is. Before using this feature, you need to sign up for DDNS service providers such as www.comexe.cn, dyn.com/dns, or www.no-ip.com. The Dynamic DNS client service provider will give you a password or key.

5.17.1 Comexe.cn DDNS

If the dynamic DNS **Service Provider** you select is www.comexe.cn, the page will appear as shown in Figure 5-92.

Figure 5-92 Comexe.cn DDNS Settings

To set up for DDNS, follow these instructions:

1. Enter the **Domain Name** your dynamic DNS service provider gave.
2. Enter the **User Name** for your DDNS account.
3. Enter the **Password** for your DDNS account.
4. Click the **Login** button to login the DDNS service.

Connection Status -The status of the DDNS service connection is displayed here.

Click **Logout** to log out of the DDNS service.

Note:

If you want to login again with another account after a successful login, please click the **Logout** button, then input your new username and password and click the **Login** button.

5.17.2 Dyn.com/dns DDNS

If the dynamic DNS **Service Provider** you select is dyn.com/dns, the page will appear as shown in Figure 5-93.

Figure 5-93 Dyndns.org DDNS Settings

To set up for DDNS, follow these instructions:

1. Enter the **User Name** for your DDNS account.
2. Enter the **Password** for your DDNS account.
3. Enter the **Domain Name** you received from dynamic DNS service provider.
4. Click the **Login** button to login to the DDNS service.

Connection Status -The status of the DDNS service connection is displayed here.

Click **Logout** to logout of the DDNS service.

Note:

If you want to login again with another account after a successful login, please click the **Logout** button, then input your new username and password and click the **Login** button.

5.17.3 No-ip.com DDNS

If the dynamic DNS **Service Provider** you select is www.no-ip.com, the page will appear as shown in Figure 5-94.

Figure 5-94 No-ip.com DDNS Settings

To set up for DDNS, follow these instructions:

1. Enter the **User Name** for your DDNS account.
2. Enter the **Password** for your DDNS account.
3. Enter the **Domain Name** you received from dynamic DNS service provider.
4. Click the **Login** button to login to the DDNS service.

Connection Status - The status of the DDNS service connection is displayed here.

Click **Logout** to log out the DDNS service.

 **Note:**

If you want to login again with another account after a successful login, please click the **Logout** button, then input your new username and password and click the **Login** button.

5.18 IPv6 Support

Figure 5-95 IPv6 Support

There are two submenus under the IPv6 Support menu (shown in Figure 5-95): **IPv6 Status** and **IPv6 Setup**. Click either of them, and you will be able to scan or configure the corresponding function. The detailed explanations for each submenu are provided below.

5.18.1 IPv6 Status

IPv6 Status	
WAN	
Connection Type:	DHCPv6
IPv6 Address:	2000::4440:8358:e20f:5a63/64
IPv6 Default Gateway:	
Primary IPv6 DNS:	2000::ff
Secondary IPv6 DNS:	2000::fe
LAN	
IPv6 Address Assign Type:	SLAAC
IPv6 Address:	3000:458:ff01:f71:200:c8ff:fe21:472e/64
Link-local Address:	fe80::200:c8ff:fe21:472e/64

Figure 5-96 IPv6 Status

The **IPv6 Status** page displays the router's current IPv6 status and configuration. All information is read-only.

➤ WAN

- **Connection Type** - The IPv6 connection way for WAN
- **IPv6 Address** - The WAN IPv6 address
- **IPv6 Default Gateway** - The router's default gateway
- **Primary IPv6 DNS** - The primary IPv6 DNS address
- **Secondary IPv6 DNS** - The secondary IPv6 DNS address

➤ LAN

- **IPv6 Address Assign Type** - There are two types of assignation for IPv6 address: SLAAC (Stateless address auto-configuration) and DHCPv6 (Dynamic Host Configuration Protocol for IPv6) Server.

1) SLAAC

- **IPv6 Address Prefix** -The Prefix of IPv6 Address

2) DHCPv6 Server

- **Release Time** - the length of time a network user will be allowed to keep connecting to the router with the current DHCPv6 Address. Enter the amount of time (in seconds) that the DHCPv6 address will be leased. The time range is 1~691200 seconds. The default value is 86400 seconds.
- **IPv6 Address** - Displays the LAN IPv6 Address.

5.18.2 IPv6 Setup

The screenshot shows the IPv6 configuration interface, divided into two sections: WAN Setup and LAN Setup.

WAN Setup:

- Enable IPv6
- WAN Connection Type: DHCPv6 (dropdown menu)
- Get non-temporary IPv6 address.

 Get IPv6 prefix delegation.
- IPv6 Address: 2000::eb2c:b9fe:7785:c8e3

 Renew (button) Release (button)
- Get IPv6 DNS Server Automatically

 Primary IPv6 DNS: 2000::ff

 Secondary IPv6 DNS: 2000::fe

 Use the following IPv6 DNS Servers

LAN Setup:

- IPv6 Address Assign Type: SLAAC (dropdown menu)
- IPv6 Address Prefix: 3330:458:ff01:f71::/64
- LAN IPv6 Address: 3330:458:ff01:f71:200:c8ff:fe21:472e/64

Save (button)

Figure 5-97 Enable/Disable IPv6

- **Enable IPv6** - Tick the checkbox to enable the IPv6 function. It's enabled by default.
- **WAN Connection Type** - Choose the correct WAN connection type based on your ISP network topology.
 - **DHCPv6** - Connections which use dynamic IPv6 address assignment.
 - **Static IPv6** - Connections which use static IPv6 address assignment.
 - **PPPoEv6** - Connections which use PPPoEV6 that requires a user name and password.
 - **Tunnel 6to4** - Connections which use 6to4 address assignment.

Different types of WAN connection require you to do different settings. Below are the detailed explanations for the respective type.

1) DHCPv6

WAN Setup

Enable IPv6

WAN Connection Type: DHCPv6

Get non-temporary IPv6 address.
 Get IPv6 prefix delegation.

IPv6 Address: 2000::eb2c:b9fe:7785:c8e3
Renew Release

Get IPv6 DNS Server Automatically
 Primary IPv6 DNS: 2000::ff
 Secondary IPv6 DNS: 2000::fe
 Use the following IPv6 DNS Servers

LAN Setup

IPv6 Address Assign Type: SLAAC

IPv6 Address Prefix: 3330:458:ff01:f71:: /64
 LAN IPv6 Address: 3330:458:ff01:f71:200:c8ff:fe21:472e/64

Save

Figure 5-98 DHCPv6 - SLAAC

WAN Setup

Enable IPv6

WAN Connection Type: DHCPv6

Get non-temporary IPv6 address.
 Get IPv6 prefix delegation.

IPv6 Address: 2000::eb2c:b9fe:7785:c8e3
Renew Release

Get IPv6 DNS Server Automatically
 Primary IPv6 DNS: 2000::ff
 Secondary IPv6 DNS: 2000::fe
 Use the following IPv6 DNS Servers

LAN Setup

IPv6 Address Assign Type: DHCPv6 Server

IPv6 Address Prefix: 3330:458:ff01:f71:: /64
 Release Time: 86400 Seconds(The default is 86400, do not change unless necessary.)
 LAN IPv6 Address: 3330:458:ff01:f71:200:c8ff:fe21:472e/64

Save

Figure 5-99 DHCPv6 – DHCPv6 Server

- **Get non-temporary IPv6 address** - Get a non-temporary IPv6 address from the ISP.

- **Get IPv6 prefix delegation** - Get a temporary IPv6 address and IPv6 prefix from the ISP, the temporary IPv6 address is set to the WAN port, and the LAN port advertise IPv6 address by RADVD or DHCPs.
- **IPv6 Address** - The IPv6 address assigned by your ISP dynamically.

Click the **Renew** button to renew the IPv6 parameters from your ISP.

Click the **Release** button to release the IPv6 parameters from your ISP.

If your ISP gives you one or two DNS IPv6 addresses, select **Use the following IPv6 DNS Servers** and enter the **Primary IPv6 DNS** and **Secondary IPv6 DNS** into the correct fields. Otherwise, the DNS servers will be assigned from ISP dynamically.

- **Primary IPv6 DNS** - Enter the DNS IPv6 address in dotted-decimal notation provided by your ISP.
- **Secondary IPv6 DNS** - Enter another DNS IPv6 address in dotted-decimal notation provided by your ISP.

 **Note:**

If you get Address not found error when you access a Web site, it is likely that your DNS servers are set up improperly. You should contact your ISP to get DNS server addresses.

- **IPv6 Address Assign Type** - There are two types of assignation for IPv6 address: SLAAC (Stateless address auto-configuration) and DHCPv6 (Dynamic Host Configuration Protocol for IPv6) Server.

SLAAC

- **IPv6 Address Prefix** -The Prefix of IPv6 Address.

DHCPv6 Server

- **IPv6 Address Prefix** -The Prefix of IPv6 Address.
- **Release Time** - the length of time a network user will be allowed to keep connecting to the router with the current DHCPv6 Address. Enter the amount of time (in seconds) that the DHCPv6 address will be leased. The time range is 1~691200 seconds. The default value is 86400 seconds.

- **LAN IPv6 Address** - Displays the LAN IPv6 Address.

2) Static IPv6

WAN Setup	
<input checked="" type="checkbox"/> Enable IPv6	
WAN Connection Type:	Static IPv6
IPv6 Address:	2001:4860:4860:456:123:456:789:123

5.19 System Tools

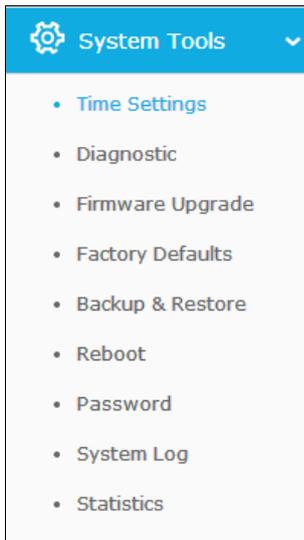

Figure 5-106 The System Tools menu

Choose menu “**System Tools**”, and you can see the submenus under the main menu: **Time Settings**, **Diagnostic**, **Firmware Upgrade**, **Factory Defaults**, **Backup & Restore**, **Reboot**, **Password**, **System Log** and **Statistics**. Click any of them, and you will be able to configure the corresponding functions. The detailed explanations for each submenu are provided below.

5.19.1 Time Settings

Choose menu “**Advanced**→**System Tools**→**Time Settings**”, and then you can configure the time on the following screen.

Time Settings

Time zone: (GMT-08:00) Pacific Time ▼

Date: (MM/DD/YY)

Time: (HH/MM/SS)

NTP Server 1: (Optional)

NTP Server 2: (Optional)

Enable DaylightSaving

Start: 2014

End: 2014

Daylight Saving Status:

Note: Click the "GET GMT" to update the time from the internet with the pre-defined servers or entering the customized server (IP Address or Domain Name) in the above frames.

Figure 5-107 Time settings

- **Time Zone** - Select your local time zone from this pull down list.
- **Date** - Enter your local date in MM/DD/YY into the right blanks.
- **Time** - Enter your local time in HH/MM/SS into the right blanks.
- **NTP Server 1 / NTP Server 2** - Enter the address or domain of the **NTP Server 1** or **NTP Server 2**, and then the router will get the time from the NTP Server preferentially. In addition, the router built-in some common NTP Servers, so it can get time automatically once it connects the Internet.
- **Enable Daylight Saving** - Check the box to enable the Daylight Saving function.
- **Start** - The time to start the Daylight Saving. Select the month in the first field, the week in the second field, the day in the third field and the time in the last field.
- **End** - The time to end the Daylight Saving. Select the month in the first field, the week in the second field, the day in the third field and the time in the last field.
- **Daylight Saving Status** - Displays the status whether the Daylight Saving is in use.

To set time manually:

1. Select your local time zone.
2. Enter the **Date** in Month/Day/Year format.
3. Enter the **Time** in Hour/Minute/Second format.
4. Click **Save**.

To set time automatically:

1. Select your local time zone.
2. Enter the address or domain of the **NTP Server I** or **NTP Server II**.
3. Click the **Get GMT** button to get system time from Internet if you have connected to the Internet.

To set Daylight Saving:

1. Check the box to enable Daylight Saving.
2. Select the start time from the drop-down lists in the **Start** field.
3. Select the end time from the drop-down lists in the **End** field.
4. Click the **Save** button to save the settings.

	<input checked="" type="checkbox"/> Enable DaylightSaving
Start:	2014 Mar 3rd Sun 2am
End:	2014 Nov 2nd Sun 3am
Daylight Saving Status:	daylight saving is down.

Figure 5-108 Time settings

Note:

1. This setting will be used for some time-based functions such as firewall. You must specify your time zone once you login to the router successfully; otherwise, these functions will not take effect.
2. The time will be lost if the router is turned off.
3. The router will automatically obtain GMT from the Internet if it is configured accordingly.
4. The Daylight Saving will take effect one minute after the configurations are completed.

5.19.2 Diagnostic

Choose menu “**Advanced**→**System Tools**→**Diagnostic**”, and then you can transact **Ping** or **Traceroute** function to check connectivity of your network in the following screen.

The screenshot shows the 'Diagnostic Tools' interface. It features a blue header bar with the text 'Diagnostic Tools'. Below the header is a section titled 'Diagnostic Parameters'. In this section, there are two radio buttons: 'Ping' (which is selected) and 'Traceroute'. Below the radio buttons are several input fields: 'IP Address/ Domain Name' (empty), 'Ping Count' (4), 'Ping Packet Size' (64), 'Ping Timeout' (800), and 'Traceroute Max TTL' (20). Each input field has a small text label indicating its range or unit. Below the 'Diagnostic Parameters' section is a 'Diagnostic Results' section, which is currently empty except for the text 'This device is ready.' enclosed in a dashed border. At the bottom of the interface is a 'Start' button.

Figure 5-109 Diagnostic Tools

- **Diagnostic Tool** - Check the radio button to select one diagnostic tool.
 - **Ping** - This diagnostic tool troubleshoots connectivity, reachability, and name resolution to a given host or gateway.
 - **Traceroute** - This diagnostic tool tests the performance of a connection.

Note:

You can use ping/traceroute to test both numeric IP address or domain name. If pinging/tracerouting the IP address is successful, but pinging/tracerouting the domain name is not, you might have a name resolution problem. In this case, ensure that the domain name you are specifying can be resolved by using Domain Name System (DNS) queries.

- **IP Address/Domain Name** - Enter the IP Address or Domain Name of the PC whose connection you wish to diagnose.
- **Pings Count** - Specifies the number of Echo Request messages sent. The default is 4.
- **Ping Packet Size** - Specifies the number of data bytes to be sent. The default is 64.
- **Ping Timeout** - Time to wait for a response, in milliseconds. The default is 800.
- **Traceroute Max TTL** - Set the maximum number of hops (max TTL to be reached) in the path to search for the target (destination). The default is 20.

Click **Start** to check the connectivity of the Internet.

The **Diagnostic Results** page displays the result of diagnosis.

If the result is similar to the following screen, the connectivity of the Internet is fine.

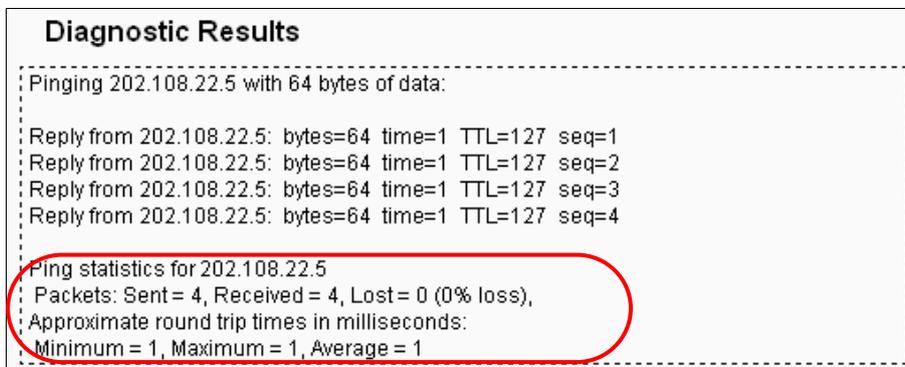

Figure 5-110 Diagnostic Results

Note:

1. Only one user can use the diagnostic tools at one time.
2. "Ping Count", "Ping Packet Size" and "Ping Timeout" are Ping Parameters, and "Traceroute Max TTL" is Traceroute Parameter.

5.19.3 Firmware Upgrade

Choose menu **Advanced**→**System Tools**→**Firmware Upgrade**, and then you can update the latest version of firmware for the router on the following screen.

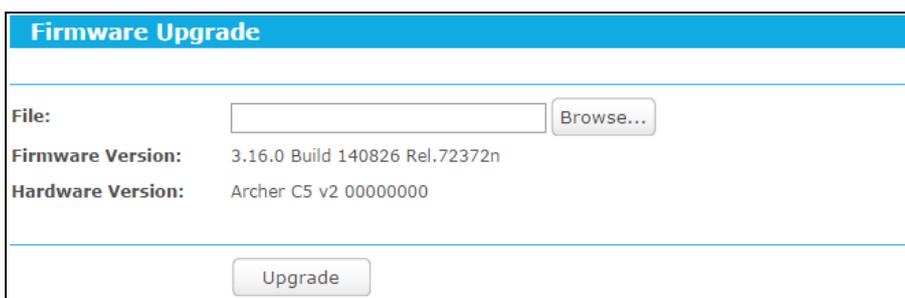

Figure 5-111 Firmware Upgrade

- **Firmware Version** - Displays the current firmware version.
- **Hardware Version** - Displays the current hardware version. The hardware version of the upgrade file must accord with the router's current hardware version.

To upgrade the router's firmware, follow these instructions below:

1. Download a most recent firmware upgrade file from our website (www.tp-link.com).
2. Enter or select the path name where you save the downloaded file on the computer into the **File** blank.
3. Click the **Upgrade** button.
4. The router will reboot while the upgrading has been finished.

 **Note:**

- 1) New firmware versions are posted at www.tp-link.com and can be downloaded for free. There is no need to upgrade the firmware unless the new firmware has a new feature you want to use. However, when experiencing problems caused by the router rather than the configuration, you can try to upgrade the firmware.
- 2) When you upgrade the router's firmware, you may lose its current configurations, so before upgrading the firmware please write down some of your customized settings to avoid losing important settings.
- 3) Do not turn off the router or press the Reset button while the firmware is being upgraded. Loss of power during the upgrade could damage the router.
- 4) The firmware version must correspond to the hardware.
- 5) The upgrade process takes a few moments and the router restarts automatically when the upgrade is complete.

5.19.4 Factory Defaults

Choose menu "**Advanced**→**System Tools**→**Factory Defaults**", and then and you can restore the configurations of the router to factory defaults on the following screen

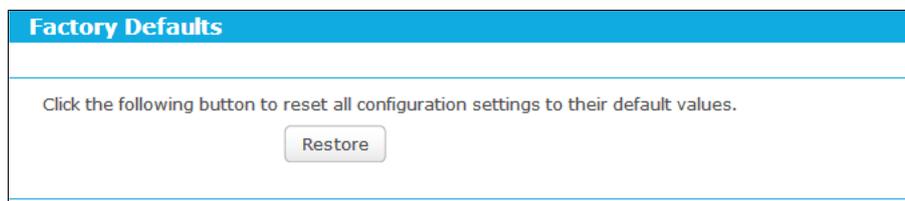

Figure 5-112 Restore Factory Default

Click the **Restore** button to reset all configuration settings to their default values.

- The default **User Name**: admin
- The default **Password**: admin

- The default **Subnet Mask**: 255.255.255.0

Note:

All changed settings will be lost when defaults are restored.

5.19.5 Backup & Restore

Choose menu “**Advanced**→**System Tools**→**Backup & Restore**”, and then you can save the current configuration of the router as a backup file and restore the configuration via a backup file as shown in Figure 5-113.

Figure 5-113 Backup & Restore Configuration

- Click the **Backup** button to save all configuration settings as a backup file in your local computer.
- To upgrade the router's configuration, follow these instructions.
 - Click the **Browse** button to find the configuration file which you want to restore.
 - Click the **Restore** button to update the configuration with the file whose path is the one you have input or selected in the blank.

Note:

The current configuration will be covered with the uploading configuration file. Wrong process will lead the device unmanaged. The restoring process lasts for 20 seconds and the router will restart automatically then. Keep the power of the router on during the process, in case of any damage.

5.19.6 Reboot

Choose menu “**Advanced**→**System Tools**→**Reboot**”, and then you can click the **Reboot** button to reboot the router via the next screen.

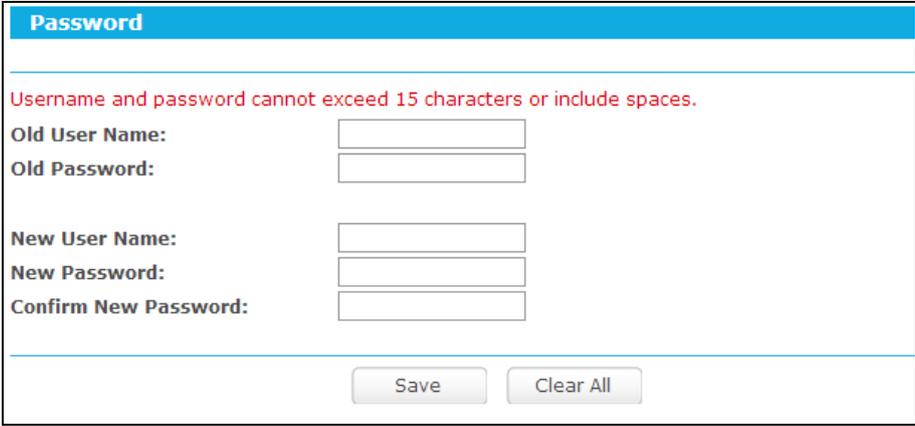

Figure 5-114 Reboot the router

Some settings of the router will take effect only after rebooting, which include

- Change the LAN IP Address (system will reboot automatically).
- Change the DHCP Settings.
- Change the Wireless configurations.
- Change the Web Management Port.
- Upgrade the firmware of the router (system will reboot automatically).
- Restore the router's settings to factory defaults (system will reboot automatically).
- Update the configuration with the file (system will reboot automatically).

5.19.7 Password

Choose menu “**Advanced**→**System Tools**→**Password**”, and then you can change the factory default user name and password of the router in the next screen as shown in Figure 5-115.

The screenshot shows a web interface titled "Password". At the top, there is a blue header bar with the word "Password" in white. Below the header, a red error message reads: "Username and password cannot exceed 15 characters or include spaces." The form contains six input fields arranged in three pairs. The first pair is labeled "Old User Name:" and "Old Password:". The second pair is labeled "New User Name:" and "New Password:". The third pair is labeled "Confirm New Password:". At the bottom of the form, there are two buttons: "Save" and "Clear All".

Figure 5-115 Password

It is strongly recommended that you should change the factory default user name and password of the router, because all users who try to access the router's Web-based utility or Quick Setup will be prompted for the router's default user name and password.

Note:

The new user name and password must not exceed 15 characters in length and not include any spaces. Enter the new Password twice to confirm it.

Click the **Save** button when finished.

Click the **Clear All** button to clear all.

5.19.8 System Log

Choose menu “**Advanced**→**System Tools**→**System Log**”, and then you can view the logs of the router.

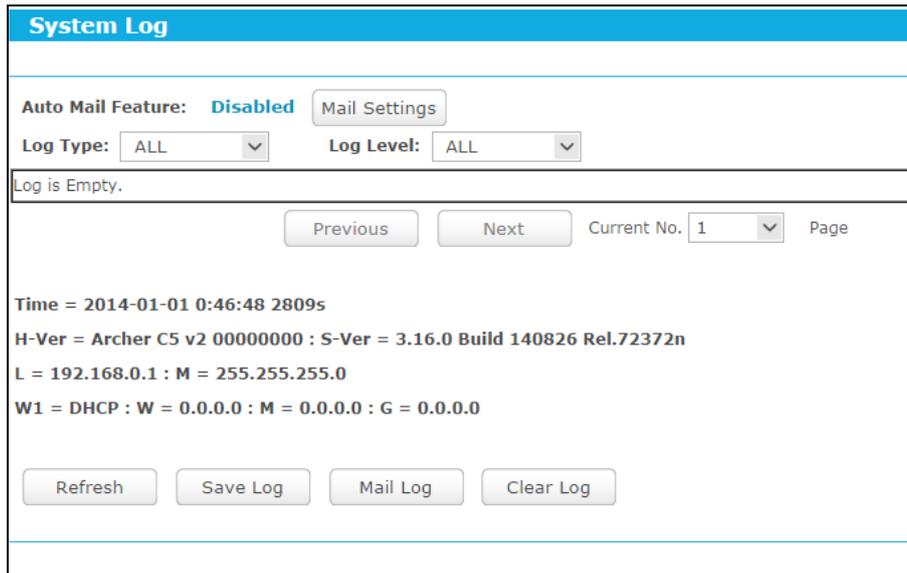

Figure 5-116 System Log

- **Auto Mail Feature** - Indicates whether auto mail feature is enabled or not.
- **Mail Settings** - Set the receiving and sending mailbox address, server address, validation information as well as the timetable for Auto Mail Feature, as shown in Figure 5-117.

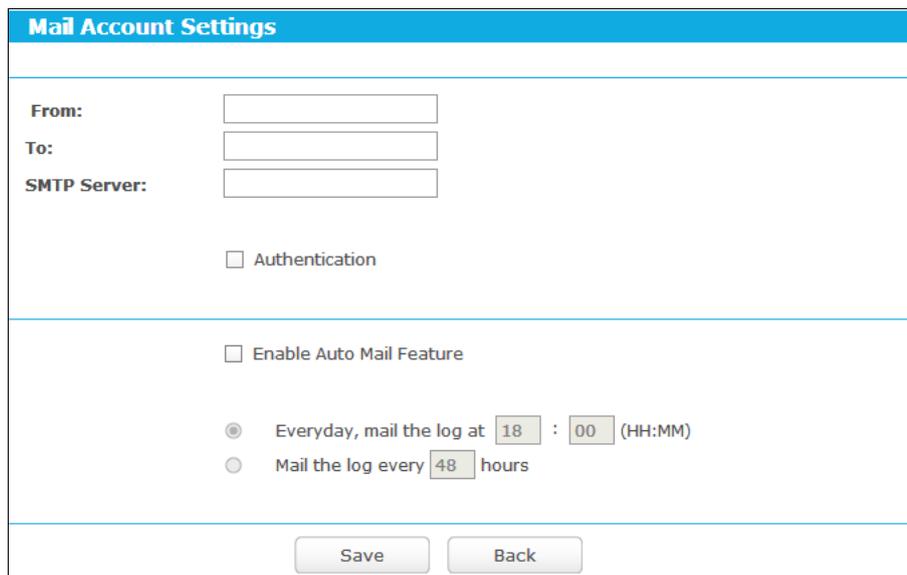

Figure 5-117 Mail Account Settings

- **From** - Your mail box address. The router would connect it to send logs.
- **To** - Recipient's address. The destination mailbox where the logs would be received.
- **SMTP Server** - Your smtp server. It corresponds with the mailbox filled in the **From** field. You can log on the relevant website for help if you are not clear with the address.
- **Authentication** - Most SMTP Server requires Authentication. It is required by most mailboxes that need User Name and Password to log in.

 **Note:**

Only when you select **Authentication**, do you have to enter the User Name and Password in the following fields.

- **User Name** - Your mail account name filled in the From field.
- **Password** - Your mail account password.
- **Confirm The Password** - Enter the password again to confirm.
- **Enable Auto Mail Feature** - Select it to mail logs automatically. You could mail the current logs either at a specified time every day or by intervals, but only one could be the current effective rule. Enter the desired time or intervals in the corresponding field as shown in Figure 5-117.

Click **Save** to keep your settings.

Click **Back** to return to the previous page.

- **Log Type** - By selecting the log type, only logs of this type will be shown.
- **Log Level** - By selecting the log level, only logs of this level will be shown.
- **Refresh** - Refresh the page to show the latest log list.
- **Save Log** - Click to save all the logs in a txt file.
- **Mail Log** - Click to send an email of current logs manually according to the address and validation information set in Mail Settings.
- **Clear Log** - All the logs will be deleted from the router permanently, not just from the page.

Click the **Next** button to go to the next page, or click the **Previous** button to return to the previous page.

5.19.9 Statistics

Choose menu “**Advanced**→**System Tools**→**Statistics**”, and then you can view the statistics of the router, including total traffic and current traffic of the last Packets Statistic Interval.

 **Note:**

Statistics will become invalid if NAT Boost is enabled. If you want to enable Statistics, please go to “**Advanced**→**NAT Boost**” to disable NAT Boost first.

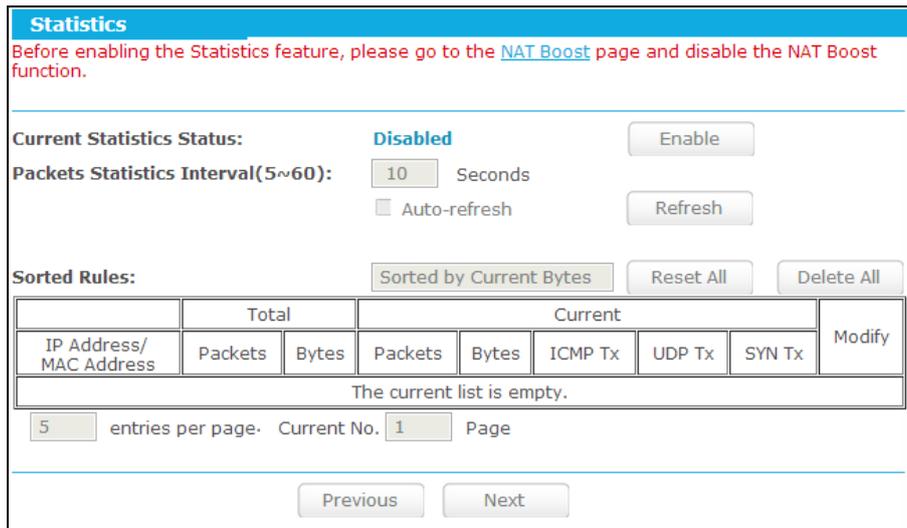

Figure 5-118 Statistics

- **Current Statistics Status** - Enable or Disable. The default value is disabled. To enable it, click the **Enable** button. If it is disabled, the function of DoS protection in Security settings will be disabled.
 - **Packets Statistics Interval (5-60)** - The default value is 10. Select a value between 5 and 60 seconds in the drop-down list. The Packets Statistic interval indicates the time section of the packets statistic.
 - **Sorted Rules** - Choose how the displayed statistics are sorted.
- Select the **Auto-refresh** checkbox to refresh automatically.
- Click the **Refresh** button to refresh immediately.
- Click **Reset All** to reset the values of all the entries to zero.
- Click **Delete All** to delete all entries in the table.

Statistics Table:

IP/MAC Address		The IP and MAC address are displayed with related statistics.
Total	Packets	The total number of packets received and transmitted by the router.
	Bytes	The total number of bytes received and transmitted by the router.
Current	Packets	The total number of packets received and transmitted in the last Packets Statistic interval seconds.
	Bytes	The total number of bytes received and transmitted in the last Packets Statistic interval seconds.
	ICMP Tx	The number of the ICMP packets transmitted to WAN per second at the specified Packets Statistics interval. It is shown like "current transmitting rate / Max transmitting rate".
	UDP Tx	The number of UDP packets transmitted to the WAN per second at the specified Packets Statistics interval. It is shown like "current transmitting rate / Max transmitting rate".
	TCP SYN Tx	The number of TCP SYN packets transmitted to the WAN per second at the specified Packets Statistics interval. It is shown like "current transmitting rate / Max transmitting rate".
Modify	Reset	Reset the value of the entry to zero.
	Delete	Delete the existing entry in the table.

There would be 5 entries on each page. Click **Previous** to return to the previous page and **Next** to the next page.

Appendix A: FAQ

1. How do I configure the router to access Internet by ADSL users?

- 1) First, configure the ADSL Modem configured in RFC1483 bridge model.
- 2) Connect the Ethernet cable from your ADSL Modem to the Internet port on the router. The telephone cord plugs into the Line port of the ADSL Modem.
- 3) Login to the router, click the “Advanced -> Network -> WAN” menu on the left of your browser, and click “WAN” submenu. On the WAN page, select “PPPoE/Russia PPPoE” for WAN Connection Type. Type user name in the “User Name” field and password in the “Password” field, type password in the “Confirm Password” field again, finish by clicking “Connect”.

Figure A-1 PPPoE Connection Type

- 4) If your ADSL lease is in “pay-according-time” mode, select “Connect on Demand” or “Connect Manually” for Internet connection mode. Type an appropriate number for “Max Idle Time” to avoid wasting paid time. Otherwise, you can select “Auto-connecting” for Internet connection mode.

Figure A-2 PPPoE Connection Mode

Note:

1. Sometimes the connection cannot be disconnected although you specify a time to Max Idle Time, since some applications is visiting the Internet continually in the background.
2. If you are a Cable user, please configure the router following the above steps.

2. How do I configure the router to access Internet by Ethernet users?

- 1) Login to the router, click the "Network" menu on the left of your browser, and click "WAN" submenu. On the WAN page, select "Dynamic IP" for "WAN Connection Type", finish by clicking "Save".
- 2) Some ISPs require that you register the MAC Address of your adapter, which is connected to your cable/DSL Modem during installation. If your ISP requires MAC register, login to the router and click the "Network" menu link on the left of your browser, and then click "MAC Clone" submenu link. On the "MAC Clone" page, if your PC's MAC address is proper MAC address, click the "Clone MAC Address" button and your PC's MAC address will fill in the "WAN MAC Address" field. Or else, type the MAC Address into the "WAN MAC Address" field. The format for the MAC Address is XX-XX-XX-XX-XX-XX. Then click the "Save" button. It will take effect after rebooting.

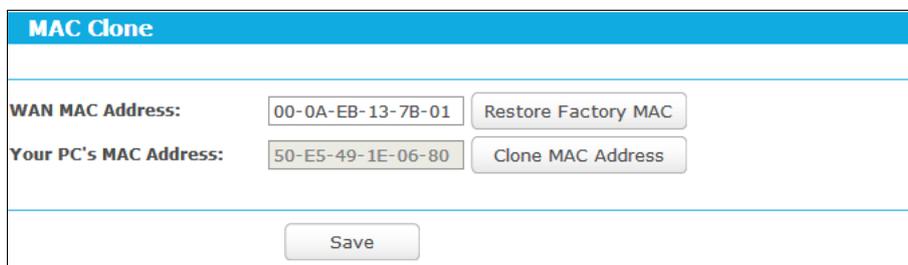

Figure A-3 MAC Clone

3. I want to use Netmeeting, what do I need to do?

- 1) If you start Netmeeting as a host, you don't need to do anything with the router.
- 2) If you start as a response, you need to configure Virtual Server or DMZ Host and make sure the H323 ALG is enabled.
- 3) How to configure Virtual Server: Log in to the router, click the "Forwarding" menu on the left of your browser, and click "Virtual Servers" submenu. On the "Virtual Servers" page, click **Add New....** Then on the "Add or Modify a Virtual Server Entry" page, enter "1720" for the "Service Port" blank, and your IP address for the "IP Address" blank, taking 192.168.0.169 for an example, remember to **Enable** and **Save**.

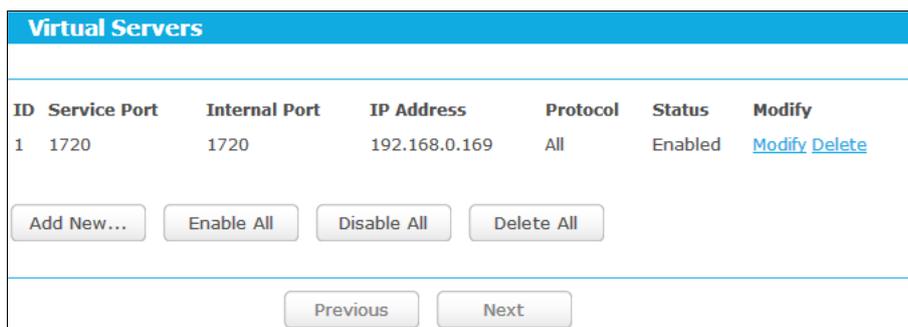

Figure A-4 Virtual Servers

Figure A-5 Add or Modify a Virtual server Entry

Note:

Your opposite side should call your WAN IP, which is displayed on the “Status” page.

- 4) How to enable DMZ Host: Log in to the router, click the “**Forwarding**” menu on the left of your browser, and click “**DMZ**” submenu. On the “DMZ” page, click **Enable** radio button and type your IP address into the “DMZ Host IP Address” field, using 192.168.0.169 as an example, remember to click the **Save** button.

Figure A-6 DMZ

- 5) How to enable H323 ALG: Log in to the router, click the “**Security**” menu on the left of your browser, and click “**Basic Security**” submenu. On the “**Basic Security**” page, check the **Enable** radio button next to **H323 ALG**. Remember to click the **Save** button.

Figure A-7 Basic Security

4. I want to build a WEB Server on the LAN, what should I do?

- 1) Because the WEB Server port 80 will interfere with the WEB management port 80 on the router, you must change the WEB management port number to avoid interference.
- 2) To change the WEB management port number: Log in to the router, click the “**Security**” menu on the left of your browser, and click “**Remote Management**” submenu. On the “**Remote Management**” page, type a port number except 80, such as 88, into the “Web Management Port” field. Click **Save** and reboot the router.

Figure A-8 Remote Management

Note:

If the above configuration takes effect, you can visit and configure the router by typing <http://192.168.0.1:88> (the router’s LAN IP address: Web Management Port) in the address field of the Web browser. If the LAN IP of the modem connected with your router is 192.168.0.x, the default LAN IP of the router will automatically switch from 192.168.0.1 to 192.168.1.1 to avoid IP conflict; in this case, please try <http://192.168.1.1:88>.

- 3) Log in to the router, click the **"Forwarding"** menu on the left of your browser, and click the **"Virtual Servers"** submenu. On the **"Virtual Servers"** page, click **Add New...**, then on the **"Add or Modify a Virtual Server"** page, enter **"80"** into the blank next to the **"Service Port"**, and your IP address next to the **"IP Address"**, assuming 192.168.0.188 for an example, remember to **Enable** and **Save**.

Virtual Servers						
ID	Service Port	Internal Port	IP Address	Protocol	Status	Modify
1	1720	1720	192.168.0.169	All	Enabled	Modify Delete

Figure A-9 Virtual Servers

Add or Modify a Virtual Server Entry

Service Port: (XX-XX or XX)

Internal Port: (XX, Only valid for single Service Port or leave it blank)

IP Address:

Protocol: ▼

Status: ▼

Common Service Port: ▼

Figure A-10 Add or Modify a Virtual server Entry

5. The wireless stations cannot connect to the router.

- 1) Make sure the **"Wireless router Radio"** is enabled.
- 2) Make sure that the wireless stations' SSID accord with the router's SSID.
- 3) Make sure the wireless stations have right KEY for encryption when the router is encrypted.
- 4) If the wireless connection is ready, but you can't access the router, check the IP Address of your wireless stations.

Appendix B: Configuring the PC

In this section, we'll use Windows 7 as an example to introduce how to install and configure the TCP/IP correctly. First make sure your Ethernet adapter is working, refer to the adapter's manual if needed.

1. Install TCP/IP component

- 1) On the Windows taskbar, click the **Windows** icon, and then select **Control Panel**.

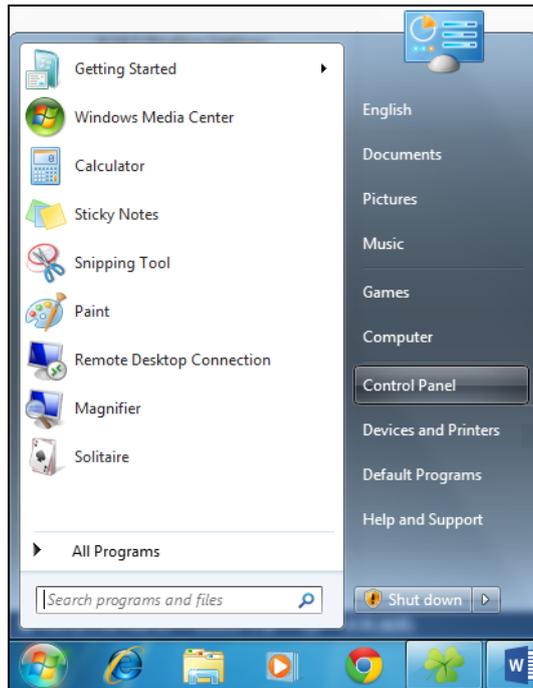

Figure B-1

- 2) Click on **View network status and tasks** under **Network and Internet**.

Figure B-2

3) Click on **Change adapter settings**.

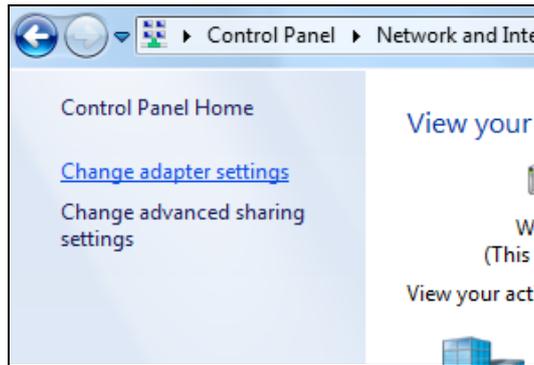

Figure B-3

4) Right-click **Local Area Connection**, and then select **Properties**.

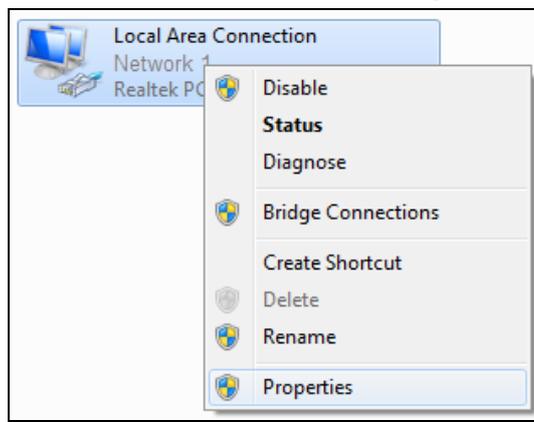

Figure B-4

5) In the **Local Area Connection Properties** window, click on **Internet Protocol Version 4 (TCP/IPv4)**.

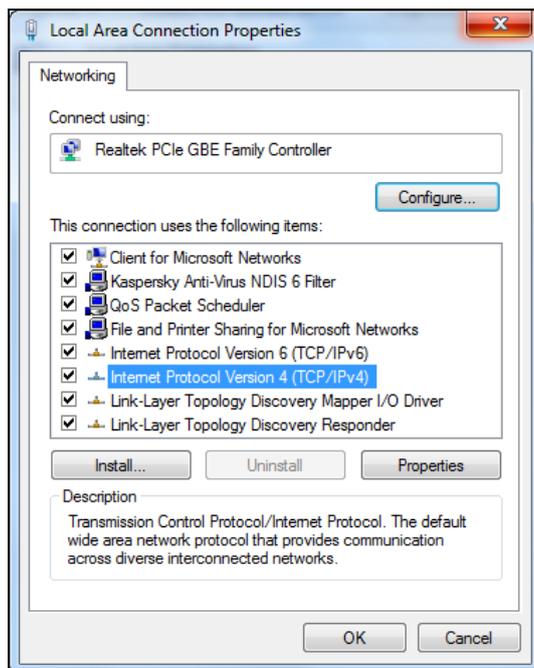

Figure B-5

6) Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**.

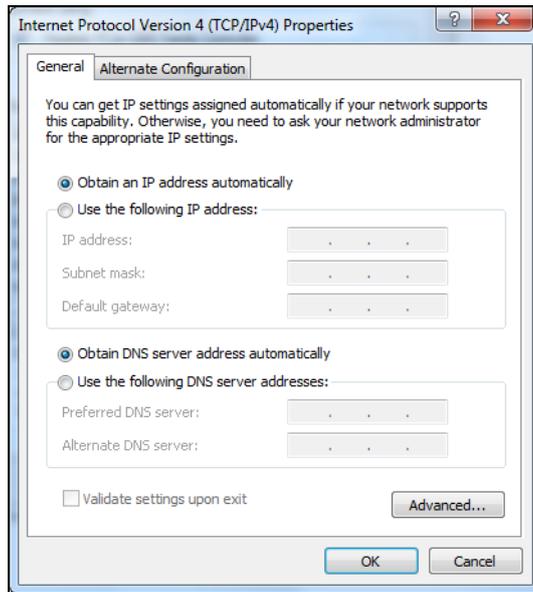

Figure B-6

2. Verify the network connection between your PC and the router

Open a command prompt, and type *ping 192.168.0.1*, and then press **Enter**.

- If the result displayed is similar to the Figure B-4, it means the connection between your PC and the router has been established well.

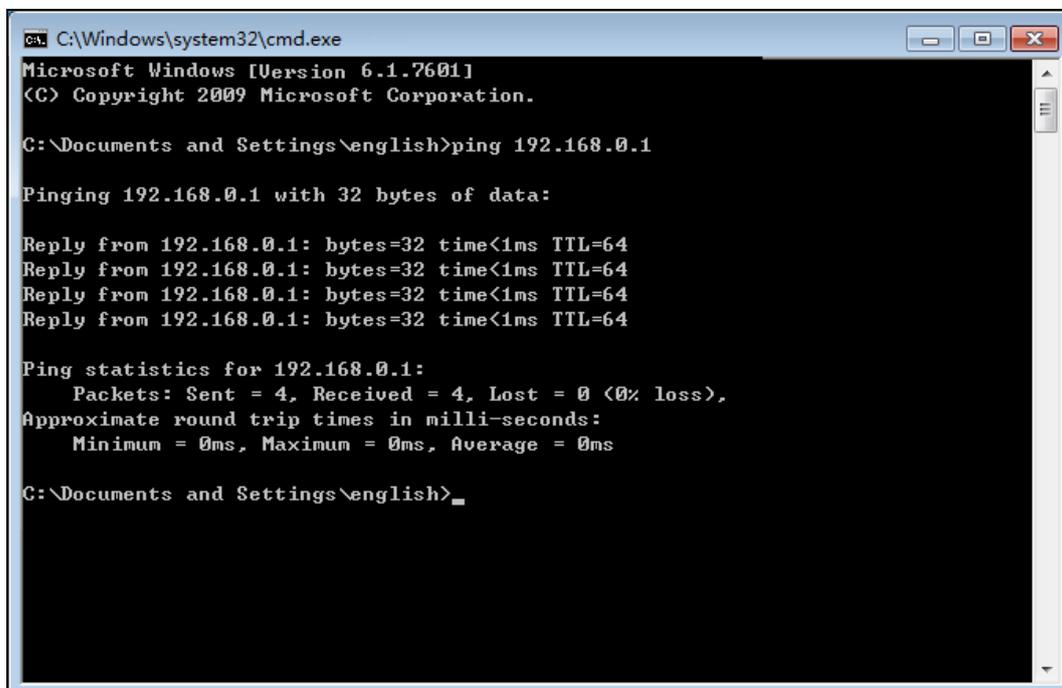

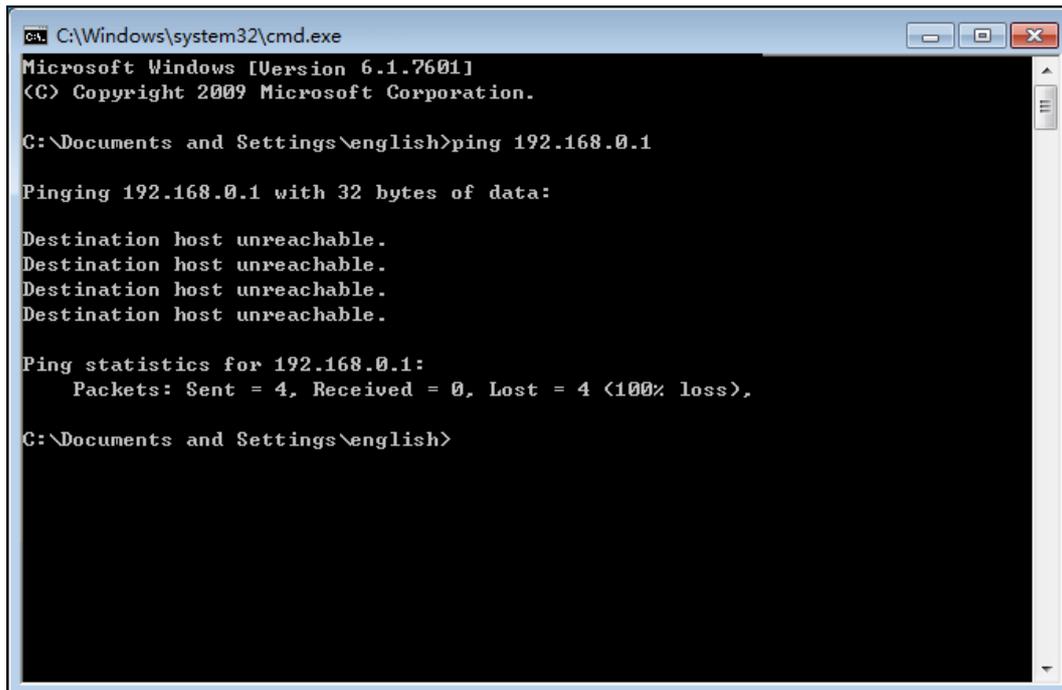

Figure B-4 Success result of Ping command

- If the result displayed is similar to Figure B-5, it means the connection between your PC and the router failed.

A screenshot of a Windows command prompt window. The title bar reads "C:\Windows\system32\cmd.exe". The window content shows the following text:

```
Microsoft Windows [Version 6.1.7601]
(C) Copyright 2009 Microsoft Corporation.

C:\Documents and Settings\english>ping 192.168.0.1

Pinging 192.168.0.1 with 32 bytes of data:

Destination host unreachable.
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.

Ping statistics for 192.168.0.1:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),

C:\Documents and Settings\english>
```

Figure B-5 Failure result of Ping command

Please check the connection following these steps:

1. Is the connection between your PC and the router correct?

Note:

The Ethernet LED  on the router and LEDs on your PC's adapter should be lit.

2. Is the TCP/IP configuration for your PC correct?

Note:

If the router's IP address is 192.168.0.1, your PC's IP address must be within the range of 192.168.0.2 ~ 192.168.0.254.

3. Is the default LAN IP of the router correct?

Note:

If the LAN IP of the modem connected with your router is 192.168.0.x, the default LAN IP of the router will automatically switch from 192.168.0.1 to 192.168.1.1 to avoid IP conflict. Therefore, in order to verify the network connection between your PC and the router, you can open a command prompt, and type *ping 192.168.1.1*, and then press **Enter**.

Appendix C: Specifications

General	
Standards	IEEE 802.11ac, IEEE 802.11n, IEEE 802.11g, IEEE 802.11b, IEEE 802.11a, IEEE 802.11e, IEEE 802.11i, IEEE 802.1X, IEEE 802.3X, IEEE 802.3, IEEE 802.3u, IEEE 802.3ab
Protocols	TCP/IP, PPPoE, DHCP, ICMP, NAT, SNTP
Ports	1 10/100/1000M Auto-Negotiation Internet RJ45 port; 4 10/100/1000M Auto-Negotiation Ethernet RJ45 ports supporting Auto MDI/MDIX; 2 USB ports supporting storage/FTP/Media/Print Server;
Cabling Type	10BASE-T: UTP category 3, 4, 5 cable (maximum 100m) EIA/TIA-568 100Ω STP (maximum 100m) 100BASE-TX: UTP category 5, 5e cable (maximum 100m) EIA/TIA-568 100Ω STP (maximum 100m) 1000BASE-TX: UTP category 5, 5e cable (maximum 100m) EIA/TIA-568 100Ω STP (maximum 100m)
LEDs	 (Power),  (Wireless-2.4G),  (Wireless-5G),  (Ethernet),  (Internet),  (USB),  (USB),  (WPS)
Safety & Emissions	FCC, CE
Wireless	
Frequency Band*	2.4GHz, 5GHz
Radio Data Rate	11b: 1/2/5.5/11Mbps 11a/g: 6/9/12/18/24/36/48/54Mbps 11n: up to 300Mbps 11ac: up to 866Mbps
Frequency Expansion	DSSS (Direct Sequence Spread Spectrum)
Modulation	11ac: 256-QAM for OFDM 11n/g/a: QPSK, BPSK, 16-QAM, 64-QAM for OFDM 11b: CCK, DQPSK, DBPSK

	Storage: 5% to 90% RH, Non-condensing

* Only 2.412GHz~2.462GHz is allowed to be used in USA, which means only channel 1~11 is available for American users to choose.

Appendix D: Glossary

- **802.11ac** - IEEE 802.11ac is a wireless computer networking standard of 802.11. This specification will enable multi-station WLAN throughput of at least 1 gigabit per second. This is accomplished by extending the air interface concepts embraced by 802.11n: wider RF bandwidth, more MIMO spatial streams, multi-user MIMO, and high-density modulation (up to 256 QAM).
- **802.11n** - 802.11n builds upon previous 802.11 standards by adding MIMO (multiple-input multiple-output). MIMO uses multiple transmitter and receiver antennas to allow for increased data throughput via spatial multiplexing and increased range by exploiting the spatial diversity, perhaps through coding schemes like Alamouti coding. The Enhanced Wireless Consortium (EWC) [3] was formed to help accelerate the IEEE 802.11n development process and promote a technology specification for interoperability of next-generation wireless local area networking (WLAN) products.
- **802.11b** - The 802.11b standard specifies a wireless networking at 11 Mbps using direct-sequence spread-spectrum (DSSS) technology and operating in the unlicensed radio spectrum at 2.4GHz, and WEP encryption for security. 802.11b networks are also referred to as Wi-Fi networks.
- **802.11g** - specification for wireless networking at 54 Mbps using direct-sequence spread-spectrum (DSSS) technology, using OFDM modulation and operating in the unlicensed radio spectrum at 2.4GHz, and backward compatibility with IEEE 802.11b devices, and WEP encryption for security.
- **DDNS (Dynamic Domain Name System)** - The capability of assigning a fixed host and domain name to a dynamic Internet IP Address.
- **DHCP (Dynamic Host Configuration Protocol)** - A protocol that automatically configure the TCP/IP parameters for the all the PC(s) that are connected to a DHCP server.
- **DMZ (Demilitarized Zone)** - A Demilitarized Zone allows one local host to be exposed to the Internet for a special-purpose service such as Internet gaming or videoconferencing.
- **DNS (Domain Name System)** - An Internet Service that translates the names of websites into IP addresses.
- **Domain Name** - A descriptive name for an address or group of addresses on the Internet.
- **DSL (Digital Subscriber Line)** - A technology that allows data to be sent or received over existing traditional phone lines.
- **ISP (Internet Service Provider)** - A company that provides access to the Internet.

- **MTU (Maximum Transmission Unit)** - The size in bytes of the largest packet that can be transmitted.
- **NAT (Network Address Translation)** - NAT technology translates IP addresses of a local area network to a different IP address for the Internet.
- **PPPoE (Point to Point Protocol over Ethernet)** - PPPoE is a protocol for connecting remote hosts to the Internet over an always-on connection by simulating a dial-up connection.
- **SSID** - A **S**ervice **S**et **I**dentification is a thirty-two character (maximum) alphanumeric key identifying a wireless local area network. For the wireless devices in a network to communicate with each other, all devices must be configured with the same SSID. This is typically the configuration parameter for a wireless PC card. It corresponds to the ESSID in the wireless Access Point and to the wireless network name.
- **WEP (Wired Equivalent Privacy)** - A data privacy mechanism based on a 64-bit or 128-bit or 152-bit shared key algorithm, as described in the IEEE 802.11 standard.
- **Wi-Fi** - A trade name for the 802.11b wireless networking standard, given by the Wireless Ethernet Compatibility Alliance (WECA, see <http://www.wi-fi.net>), an industry standards group promoting interoperability among 802.11b devices.
- **WLAN (Wireless Local Area Network)** - A group of computers and associated devices communicate with each other wirelessly, which network serving users are limited in a local area.
