3.2 LAN Access	12
Chapter 4. Access via PC Client Software	17
4.1 WAN Access	17
4.2 LAN Access	21

# Chapter 1. Topology and USB Device

Note: Here in this guide, we take the configuration procedures of TL-WDR4300 for example.

# 1.1 Typical Topology

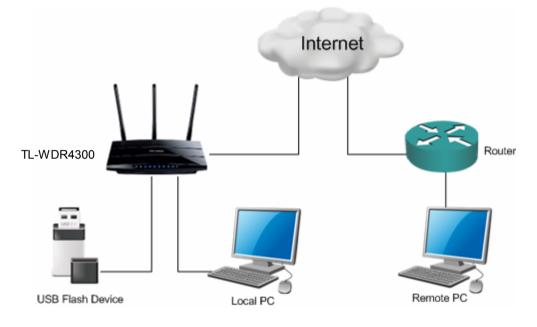

Figure 1-1 Typical Topology

### P Note:

- 1. USB Flash Device stands for FTP Server in this topology.
- 2. Local PC here means the PC that is in the same subnet with the FTP Sever. Local PC can access the FTP Server by LAN (Local Area Network), which is called LAN Access.
- Remote PC here means the PC that is not in the same subnet with the FTP Sever. Remote PC needs to go through the Internet if needed to access the FTP server, which is called WAN Access.

# 1.2 Special Topology

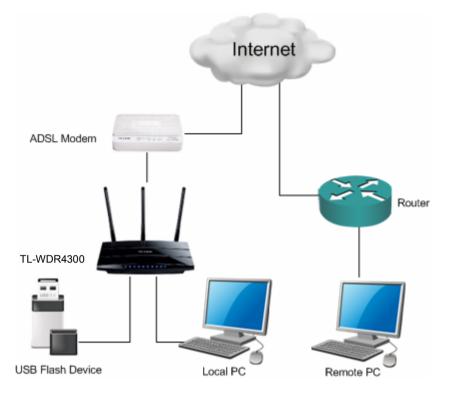

Figure 1-2 Special Topology

#### P Note:

The WAN port of TL-WDR4300 is linked to the LAN port of an xDSL modem. If the modem has already obtained a public IP by dialing to the Internet with the username and password provided from your ISP and TL-WDR4300 obtains its IP through Dynamic IP service provided by the modem, the remote PC cannot reach the FTP server through the WAN IP of TL-WDR4300 because the WAN IP of TL-WDR4300 is not a public IP in case of this situation. You can consult the vendor of the modem to modify some settings to let the TL-WDR4300 obtain public IP or assign a specific port for FTP server application with private IP.

## 1.3 USB Device

The USB Flash Device taken for example here is Kingston 1GB USB Flash with one volume which includes 3 folders (tplink01, tplink02, tplink03) and 3 files (test01.doc, test02.doc, test03.doc).

The following part would help you set up a FTP server and download the files from the FTP server through a USB Flash.

# Chapter 2. Configuration of the Wireless Router

To set up your FTP Server, please follow the instructions below:

- 1. Make sure you have a PC connected to the wireless router, either through wireless connection or wired connection.
- 2. Plug an external USB hard disk drive or USB flash drive into the USB port on the back panel of the Router.
- 3. Open a Web browser and type the Router's default domain name <u>http://tplinklogin.net</u> in the address field to log in the Web-based configuration utility. Then press *Enter* key.

Figure 2-1 Type in Default Domain Name

4. After a moment, a login window will appear. Enter *admin* for the User Name and Password, both in lower case letters. Then click the *OK* button or press the *Enter* key.

Figure 2-2 Login Window

5. Go to **USB Settings->FTP Server**, the screen will appear as shown in Figure 2-3. The IP behind **Internet Address** would be used to access the FTP server.

Dynamic DNS			<ul> <li>Edit - You can edit the share folder by click edit button.</li> <li>Delete - You can delete the share folder by click delete</li> </ul>

Figure 2-5 Click Save

12. Click the *Start* button to start the FTP Server.

#### Solution Note:

1. The max share folders number is 10. If you want to share a new folder when the number has reached 10, you can delete an existing share folder and then add a new one.

- 2. The change of the FTP settings will not take effect until the FTP Server is restarted.
- 3. Currently, there is quantitative restriction of FTP Server user. For example TL-WR1043ND supports 2 users at the same time, and TL-WDR4300 supports 4 users at the same time. Therefore, if you want to log in, make sure that the number of login-user is less than the maximum quantity. Once the number of users had reached the maximum quantity, the following users would fail to log in even if they have input the correct username and password.
- If a folder contains subfolders, you will see the configuration page as below when you try to *Add New Folder*. You can select the radio box under *Select* to share the specified folder and click the *upper* button to go to the upper folder.

5. Go to *File->New->FTP Site* or press *Ctrl+N* to open a new *Site properties*.

Site Properties for: Untitled(1)	
General Type Actions Options Label: Intitled(1) Host address:	
Username: Password:	Login method ○ Normal ④ Anonymous ○ Double
Connect OK Ca	ancel Help

Figure 4-12

6. Set the dialog box as below and click *Connect*.

Label: Name of the site.

Host address: The IP of the Default Gateway written down in Step 3 (here is 192.168.0.1).

Username: Default setting of the wireless router is *admin* in lower case letters.

**Password:** Default setting of the wireless router is *admin* in lower case letters.

**Comments:** The information that you want to record for the specific site.

Login method: Select Normal.

- > **Normal** The user name and password are mandatory to connect to a site.
- > Anonymous The site does not require any user name and password.
- **Double** The user name and password are required twice to connect to a site.

Figure 4-13

7. Now you can see the folder *TP-LINK* in the panel. Double-click the folder.

#### PNote:

When you connect to a site, your *My Documents* folder is the default local folder to save your downloaded files, and the default remote folder is the folder specified when you configured the site. You can specify a different local folder and/or remote folder to appear in the Local and Remote panels when you log in to a site.
