Quick Installation Guide

150M Wireless N Router
TL-WR740N / TL-WR741ND

1. Connect the Hardware

1. **Power off the modem, and remove the backup battery if any.**

2. **Connect the modem to the WAN port on your router using an Ethernet cable.**

3. **Power on the modem, wait for 2 minutes and then power on the router.**

4. **Check the following LEDs to ensure the hardware connection is correct.**

   - Power On
   - System Status
   - Wireless Flasing
   - Internet On/Flashing

   *Note: If your Internet comes via an Ethernet cable from the wall instead of any DSL/Cable/Satellite modems, please connect the Ethernet cable directly to the router’s WAN port.*

2. Configure the Router

**Method 1 Via Web Browser**

1. **Connect your computer to the router (Wired or Wireless).**

   - **Wired:** Connect a network cable to the router and your computer.
   - **Or:** Connect wirelessly by using the default network name (SSID) and password printed on the product label at the bottom of the router.

2. **Open a web browser on the computer and configure the router according to the following main clues.**

   - **Enter** [http://tplinkwifi.net](http://tplinkwifi.net) **in the address bar.**
   - **Type in admin for both the user name and password and click Login.**
   - **Select** your WAN Connection Type, or click **Auto-Detect** if you are unsure what your connection type is. **Click Next** and follow the instructions to continue.
   - **Verify** or change the wireless network settings, and click **Next.**
   - **Click Finish** to complete the setup.

   **Quick Setup-WAN Connection Type**
   - Auto-Detect
   - Static IP
   - Dynamic IP (DHCP Server)
   - PPPoE /PPTP /L2TP

   **Quick Setup-Wireless**
   - Wireless Network Name (SSID): [TP-LINK_2000]
   - Wireless Security: WPA-PSK
   - Wireless Password: [X000000X]

   **Quick Setup-Finish**
   - Congratulations! You are done.

   ![Enjoy!] Now your wired and wireless devices can connect to the Internet!
Frequently Asked Questions (FAQ)

Q1. What can I do if the login window does not appear?
A1. If the computer is set to a static or fixed IP address, change it to obtain an IP address automatically.
A2. Verify that IP Address and Subnet Mask are correctly entered in the web browser. Alternatively, enter “192.168.1.1” in the web browser and press Enter.
A3. Use another web browser and try again.
A5. Disable the network adapter currently in use and then enable it again.

Q2. What can I do if I cannot access the Internet?
A1. Check if the Internet is working properly by connecting a computer directly to the modem via Ethernet cable.
A2. Contact your Internet Service Provider.
A3. Repport your problem and try again.

Q3. How do I restore the router to its factory default settings?
A1. While the router is powered on, press and hold the “RESET” button on the rear panel of the router for approximately 8 seconds.
A2. Log in to the Web Management page of the router, and go to System > Factory Defaults. Click Restore, then wait until the progress bar loading “finished.”

Q4. What can I do if I forget my password?
- Web Management page password:
  A1. Restore the router to its factory default settings and then use the default Username “admin” and Password “admin” to log in.
- Wireless Network password:
  A1. The factory default password can be found on the product label printed on the bottom of the router.
  A2. If you have changed your password, log in to the router’s Web Management page, go to Wireless > Wireless Security to obtain or reset your password.
