

Before you upgrading the firmware, there are some points you should know:

- **Choose the right firmware which has the same hardware version as yours**
- **Do NOT upgrade the firmware through wireless connection**
- **Do NOT turn off the power or cut down the Ethernet cable during upgrade**
- **Use decompression software such as WinZIP or WinRAR to extract the file you download before upgrade**

Step 1 Log into the ADSL Router by typing `http://192.168.1.1` in the address bar of the web browser (such as Internet Explorer, Firefox). Both of the User Name and Password are **admin** unless you have changed it before.

Step 2 Click **Maintenance** -> **Firmware**, click the **Browse** button to choose the firmware you downloaded before.

Step 3 Click the **UPGRADE** button. Your Router will reboot after the upgrading has been finished.

Step 4 Click **Status**-> **Device Info**, verify that the router's firmware is upgraded.

Step 5 Reenter the settings you have noted down before upgrading.
