[EAP320_V1](#) [EAP320_V2](#)

[EAP330_V1](#) [EAP330_V2](#)

Bug Fixed:

1. Fixed the bug that Omada Controller allow any user to read the files of controller.
2. Fixed the bug that controller will report an error when Top Usage data is empty.

Notes:

1. To use new features on Omada Controller 3.2.X, you need to upgrade your EAP's firmware to the corresponding version.
2. The Omada Controller program needs to use the system's netstat command. If the Linux system does not have net-tools installed (which contain the netstat command), the program may not be able to run normally.

3. Support 64-bit Linux operating system including Ubuntu 14.04/16.04/17.04/18.04/Debian 9.8

4. Built-in JRE 1.8 Java environment.

5. Once upgraded to this version of Omada Controller, you will NOT able to downgrade to an earlier version.

6. Portal configuration will be lost after upgraded to Omada Controller 3.2.X from 2.4.8.
