

VIGI Ensures 24/7 Security for The Philippine Eagle Breeding Facility

Philippine Eagle Breeding Facility CCTV Project

 Eden, Toril, Davao City

 Ongoing

 Outdoor Solution

The Philippine Eagle Center is a conservation facility located in Davao City, Philippines, that breeds Philippine Eagles and serves as a conservation center for other endemic species. Managed by the Philippine Eagle Foundation (PEF), it employs artificial insemination and natural breeding to increase the population of the critically endangered national bird. Visitors can tour the center to learn about conservation efforts and the eagles' environment.

1 Challenges

The Philippine Eagle Center needed a reliable surveillance system to ensure the safety of the eagles, staff, and visitors while minimizing human intrusion into sensitive habitats. The cameras needed have to perform efficiently in outdoor, forested environments with varying light and weather conditions.

2 Reasons for Choosing VIGI

They selected VIGI CCTV for their superior image clarity, durability in harsh environments, and advanced monitoring features that support 24/7 remote access. The system's low-light performance and weatherproof design made it ideal for wildlife conservation settings.

3 Successful Results

The installed VIGI CCTV Cameras provided enhanced security and real-time monitoring across the facility without disturbing the eagles' natural behavior. It improved staff efficiency, visitor safety, and conservation monitoring, helping the Philippine Eagle Foundation protect the country's national bird and its habitat.
