JOHN HAY

HOTELS

(FORMERLY THE MANOR AND THE FOREST LODGE)

John Hay Hotels by Landco Lifestyle Ventures is a distinguished hospitality destination nestled in the pine forests of Camp John Hay, Baguio City—offering a blend of tranquility, comfort, and modern luxury.

1 Challenges

Landco Lifestyle Ventures faced increasing demand for high-speed Wi-Fi across its resort properties. Their existing network struggled with inconsistent coverage, limited centralized management, and unstable performance during peak usage—requiring a scalable and high-performance solution capable of supporting a large number of connected devices.

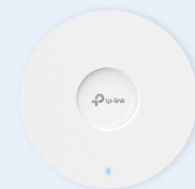

2 Reasons for Choosing Omada

To address these challenges, Unison Computer Systems, Inc, the System Integrator partner, deployment a TP-Link Omada SDN solution, delivering unified network management and enhanced performance. The deployment included 370 pieces EAP683 UR Wi-Fi 6 access points for full property coverage and two pieces OC300 hardware controllers for centralized configuration, monitoring, and control—ensuring seamless roaming and efficient network operation.

3 Successful Results

Following the deployment, the resort achieved complete Wi-Fi coverage across all areas, with faster and more stable connectivity even during peak hours. Centralized management streamlined IT operations, while improved network performance significantly enhanced the overall guest experience—creating a reliable and future-ready infrastructure.
