

New Feature/Enhancement:

1. Optimize the OC200 startup waiting page and add a progress bar prompt.
2. Optimize the AP and OC200 online upgrade process, and add an upgrade prompt in the AP list.
3. Adjust the EAP maximum transmit power limit in EAP private configuration page according to the regulations.
4. Prevent Operator users from viewing Device Account information.
5. Display AP channels in the AP list.
6. Interchange Map and Statistic page.

Bug fixed:

1. Fixed the bug that the Omada Controller page can't display normally in some browsers.
2. Fixed the bug that the password of Device Account does not support special character.

Notes:

1. For OC200 (UN) v1.
2. Your device's configuration won't be lost after upgrading.
