Bundle Omada Controller 3.1.4, click HERE for Controller release notes.

Bundled Firmware:

EAP110_V1, EAP110_V2 EAP110_V4

EAP115_V1, EAP115_V2 EAP115_V4

EAP225_V1, EAP225_V2 EAP225_V3

EAP225-Outdoor_V1

EAP110-Outdoor_V1 EAP110-Outdoor_V3

EAP245_V1 EAP245_V3

EAP115-Wall_V1 (EAP115-Wall is suitable for EU verison Only.)

EAP225-Wall_V2

EAP320_V1 EAP320_V2

EAP330_V1 EAP330_V2

New Feature/Enhancement:
1. Merge 2.4GHz and 5GHz SSID.
2. Add Guest Network function.
3. Add SSID Radius accounting to WPA-Enterprise security mode.
4. Optimize the site list which allows us to inquire the specific site based on the site name and add new entrance for the hotspot.
5. Add SSL encryption in Log Server, and Log setting/Mail Server can be only accessed by administrator account.
6. Add Layer-3 Accessibility in SSH.
7. Add CHAP encryption and NAS ID in Radius portal authentication and the Radius Client role is transferred from EAP to Omada Controller.

Notes:
1. For OC200 (UN) v1.
2. To use new features of OC200, you need to upgrade your EAP's firmware to the corresponding version.
3. Your device's configuration won't be lost after upgrading.
4. If you use External Radius Server with External Web Portal in old version controller, pay attention that the API has been changed in this version, thus you have to modify your External Web Portal, refer to FAQ-2390 for more details.
5. When you upgrade your controller or backup files from lower version, the 2.4GHz and 5GHz SSID entries with the same name will be merged and it will inherit the

parameters of the original 2.4GHz SSID.
6. The log generated by EAP will be managed and storaged by Controller if you manage EAPs by Omada Controller.
