

**This firmware is fully adapted to Omada SDN Controller 4.3.5 or above.
Support the latest Controller 5.2/5.3 management.**

New Feature/Enhancement:

1. Add support for Facebook Wi-Fi v2.
2. Add cloud optimization support in standalone/controller mode, you can choose to enable/disable cloud connection, and update the basic cloud domain name.

Bug Fixed:

1. Fix the bug that shield! Up port scan security risks.
2. Fix the bug that devices in the VLAN cannot obtain IP addresses after setting ACL for different VLAN to isolate them.
3. Fix the bug that after UPNP is enabled, the Loopback function does not take effect.
4. Fix the bug that portal was scanned for security holes by Nessus for supporting SSL2.0/3.0.
5. Fix the bug that the address reservation function is invalid for IoT devices.
6. Fix the bug that when an IPsec VPN tunnel is established, connections unrelated to the tunnel are deleted.
7. Fix the bug that failed to connect to Server as L2TP Client for the second time.

Notes:

1. For ER605 (TL-ER605) v1.0 and v1.6.
2. Your device's configuration won't be lost after upgrading.
3. This firmware is applied to the Omada APP of version 3.0.x or above.
