

This firmware is fully adapted to Omada SDN Controller v5.5

New Feature/Enhancement:

1. Optimized the processing logic of SSL VPN with Radius authentication. Please note that if you have configured SSL VPN with Radius authentication in Controller mode, you need to upgrade Controller to V5.7 at the same time, otherwise the SSL VPN page will be hidden.

Bug Fixed:

1. Fix the bug that when using PPTP encryption cannot communicate with Windows client.
2. Fix the bug of incorrect text message prompt when setting time limit for SSL VPN.
3. Fix the bug that sometimes cannot be operated after logging into the device.
4. Fix the bug that Link Backup does not work.
5. Fix the bug that DHCP cannot assign IP address.
6. Fix the bug that user list in portal could not be imported due to compatibility issue in Standalone mode.
7. Fix the security issue of file traversal vulnerability.
8. Fix the bug that internal program problems caused the multicast function to be abnormal.
9. Fix the bug that some information reported by the device to the Controller is abnormal and causes the statistics to be empty.

Notes:

- 1 Your device's configuration won't be lost after upgrading.
2. This firmware is applied to the Omada APP of version 3.0.x or above.
