

Recommended Controller Software Version: Omada Controller v5.9 or above

New Features/Enhancements:

1. Supports Mesh.
2. Supports Bonjour.
3. Supports PMF.
4. Supports IPv6.
5. Supports LLDP(Link Layer Discovery Protocol)
6. Supports features for Ping,TraceRoute,Packet Capture,Terminal and Device Info.
7. Supports Lock to AP function.
8. Supports NTP time synchronization in Controller mode
9. Supports Multicast/Broadcast Management.
10. Supports multiple RADIUS servers and report of RADIUS username.
11. Supports 802.11r
12. Improved stability.

Bug fixed:

1. Fixes the issue that the mesh AP of a specific MAC cannot be reconnected after restarting when three or more SSIDs are configured.
2. Fixes the issue that EIRP may not prompt in 5G frequency band;
3. Fixes the issue that the VLAN ID configured for PPSK with RADIUS on some clients does not take effect.
4. Fixes stuck communication between radius process and uclite process when a large number of clients perform MAC Auth at the same time.

Notes:

- 1.This version of firmware is applied to the Omada APP v4.10 or above
