

Recommended Omada Pro Controller v1.8 or above

New Feature/Enhancement:

1. Add support for viewing ARP table in Controller mode.
2. Add support for closing the Web management port and APP discovery service in Controller mode.

Bug Fixed:

1. Fixed the bug that multicast acceleration caused VLAN data forwarding errors.
2. Fixed the bug that the URL Filtering cannot take effect correctly.
3. Fixed the bandwidth display issue of channel deployment.
4. Fixed the bug that Radius CoA would raise the client abnormally.
5. Fixed the return result display issue of Tools - Network Check - DNSLookup.
6. Fixed the bug of stuck inter-process communication when number of clients performing the MAC-Based Authentication at the same time.
7. Fixed the bug that the UI cannot be automatically refreshed when delete MAC Groups in MAC Filter.
8. Fixed the bug that the Portal cannot pop up when clients connect to the SSID with Dynamic VLAN and Portal both configured.
9. Fixed the bug that the Group Key Update Period value becomes default value when update the SSID in APP.
10. Fixed the bug of auto reboot when configure IPv6 URL Filtering.
11. Fixed the bug that the device would generate a wireless association password error log when PPSK is used and the device does not get the password.
