Recommended Controller Software Version: Omada Controller v5.7 or above

New Features/Enhancements:

1. Add support for MAC-Based Authentication with encrypted SSID.

2. Add support for VLAN information of PPSK clients in Controller mode.

3. Add support for L3 Access in Controller mode.

4. Add support to enable/disable Cloud-connection in Standalone mode.

5. Increased the PPSK entry limit for PPSK without RADIUS from 50 to 128 in Controller mode.

6. Add support for 802.11r fast roaming protocol.

7. Improve the number of APs carrying IPC-related devices.

Bug Fixed:

1. Fixed the bug of inaccurate Mesh AP traffic statistics.

2. Fixed the bug that the Remote Log of the Controller cannot be recognized by the Telegraf.

3. Fixed some security vulnerabilities.
