

Recommended Controller Software Version: Omada Controller v5.9 or above

New Features/Enhancements:

1. Supports Mesh in Standalone Mode.
2. Supports Bonjour.
3. Supports PMF.
4. Supports IPv6.
5. Supports LLDP(Link Layer Discovery Protocol).
6. Supports features for Ping,TraceRoute,Packet Capture,Terminal and Device Info.
7. Supports Lock to AP function.
8. Supports new version of Bandsteering configuration.
9. Supports Multicast/Broadcast Management.
10. Supports multiple RADIUS servers and report of RADIUS username.
11. Supports 802.11r.
12. Supports SSID Rate Limit.
13. Improved stability.

Bug fixed:

1. Fixes the issue that Bandsteering does not take effect.
2. Fixes the issue that 802.11r not take effect in ppsk with radius mode .
3. Fixes the issue that the VLAN ID configured for PPSK with RADIUS on some clients does not take effect.
4. Fixes stuck communication between radius process and uclite process when a large number of clients perform MAC Auth at the same time.

Notes:

- 1.This version of firmware is applied to the Omada APP v4.10 or above.
