

## **Recommended Controller Software Version: Omada Controller v5.9 or above**

### Enhancements:

1. Improves stability.
2. Enhances security protection.

### Bug fixed:

1. Fixed the issue that the Wi-Fi IPC client would go offline indirectly when ARP to Unicast is enabled and a static IP is set
2. Fixed the issue that portal works abnormally when using the external portal server.
3. Fixed the issue that the portal page could not pop up normally.
4. Fixed the issue that the EAP will reboot in some scenarios.
5. Fixed the issue that EAP will disconnect when enable ARP-to-Unicast Conversion.

### Notes:

1. This version of firmware is applied to the Omada APP v4.10 or above.
