

## **Recommended Controller Software Version: Omada Controller Pro v1.9 or above**

### Enhancements:

1. Enhanced stability.
2. Enhanced security.
3. Optimized Portal Authentication function.
4. Optimized the client connection process in the multi-RADIUS server scenario.

### Bug fixed:

1. Fixed the issue that wireless clients cannot pop up the portal authentication page in some scenarios.
2. Fixed the issue that wireless clients may not be able to connect with the PPSK with Radius SSID when the Radius Proxy is enabled.
3. Fixed the issue that the PPSK with 11OS authentication failed to work.
4. Fixed the issue of URL Pre-Authentication Access not working on mesh APs.
5. Fixed the issue that the CoA function was not working when the Radius server and AP were on different subnets.
6. Fixed the issue that AP might jump to the poorly compatible 144 channel in certain scenarios.
7. Fixed the UI issue after enabling and disabling channel limit in Standalone mode.

### Notes:

1. This version of firmware is applied to the Omada APP v4.18 or above.
