

Version info

Firmware for SG3210X-M2(UN) 1.0 and 1.6. This firmware is fully adapted to Omada Controller V5.15.

New features

1. Add support for OUI-Based VLAN.
2. Add support for Route unknown for IGMP Snooping and MLD Snooping.
3. Add support for SNMPv3 AES encryption.
4. Add support for displaying the MAC status of the address through SNMP.

Enhancements

1. Optimize configuration for dropping unknown traffic.
2. Enable spanning tree by default.
3. Add display of total bandwidth for LAG.
4. Optimize port description display in logs.

Bug fixed

1. Fixed the problem that causes client authentication failure in specific scenarios.
2. Fixed the linkage problem of aggregation group and port isolation under specific configuration.
3. Fixed the problem that DNS requests to NTP Server are too frequent in specific scenarios.
4. Fixed the problem related to SNMPv3 security level restriction access.
