New Features:

1. Added support for configuring multiple RADIUS servers with PPSK.

2. Added support for Bluetooth location using iBeacon.

3. Added support for WPA3-Enterprise-only mode.

4. Added support for Prohibit Wi-Fi Sharing.

5. Added support for HTTPS Redirection on portal authentication.

6. Added support for RADIUS logout in standalone mode, including CHAP authentication.

7. Added support for Ping-Pong Roaming Suppression and Non-Stick Roaming.

8. Added support for MAC authentication via LDAP.

9. Added support for Hotspot 2.0.

10. Added support for GRE Tunnel.

11. Added support to disable the Reset button in Controller mode.

12. Added support for VLAN Pool.

13. Added support for selecting the portal landing page in Standalone mode
Enhancements:

1. Optimized AP portal functionality.

2. Modified the default list of NTP servers.

3. Optimized configuration logic to reduce the time required for certain configurations.

4. Improved roaming experience.

5. Optimized the log subscription mechanism.

6. Adapted to the new Omada Visual Identity.

7. Added power information to LLDP packets.

8. Optimized automatic bandwidth selection.

9. Enhanced system stability and overall security.

Bug fixed:

1. Fixed an issue where modifying the PPSK without RADIUS profile would affect other SSIDs.

2. Fixed an issue where AFC queries occasionally fail due to timeouts.

Notes:

1. This version of firmware is applied to the Omada APP 4.24 or above.
