New features

1. Add support for configuring ports in 1G Auto mode.
2. Disabled the ping check function of the DHCP Server by default.

Enhancements

1. Optimized the performance of DHCP Relay.

Bug fixed

1. Fixed an issue where the device could fail to correctly connect to Omada Central after the hostname was modified.
2. Fixed an issue where MAC address flapping might occur when LLDP is enabled on ports in the STP blocked state.
3. Fixed an issue where ports with Disable Profile applied could be re-enabled after Force Provision in Controller mode.
