

User Guide

BE9300 Tri-Band Wi-Fi 7 Router
Archer BE9300

Contents

About This Guide	1
Chapter 1. Get to Know About Your Router	3
1. 1. Product Overview.....	4
1. 2. Appearance	4
1. 2. 1.Front Panel.....	4
1. 2. 2.Back Panel	6
Chapter 2. Connect the Hardware	7
2. 1. Position Your Router	8
2. 2. Connect Your Router.....	8
Chapter 3. Log In to Your Router.....	10
Chapter 4. Set Up Internet Connection	12
4. 1. Use Quick Setup Wizard	13
4. 2. Quick Setup Via TP-Link Tether App.....	13
4. 3. Manually Set Up Your Internet Connection	14
4. 4. Set Up the Router as an Access Point	16
4. 5. Set Up an IPv6 Internet Connection	17
Chapter 5. TP-Link Cloud Service	23
5. 1. Register a TP-Link ID.....	24
5. 2. Change Your TP-Link ID Information.....	24
5. 3. Manage the User TP-Link IDs	25
5. 3. 1.Add TP-Link ID to Manage the Router	26
5. 3. 2.Remove TP-Link ID(s) from Managing the Router	26
5. 4. Manage the Router via the TP-Link Tether App	27
Chapter 6. Network Map	28
Chapter 7. Wireless Settings	33
7. 1. Specify Wireless Settings	34
7. 2. Create Multiple Wireless Networks.....	37
7. 3. Schedule Your Wireless Function	40

7. 4.	Use WPS for Wireless Connection	41
7. 4. 1.	Connect via the Client's PIN	41
7. 4. 2.	Connect via the Router's PIN	41
7. 4. 3.	Push the WPS Button.....	42
7. 5.	Advanced Wireless Settings	42
Chapter 8. Guest Network.....		44
8. 1.	Create a Network for Guests	45
8. 2.	Customize Guest Network Options.....	46
Chapter 9. IoT Network		47
Chapter 10.USB Settings.....		49
10. 1.	Access the USB Refer to the How to Use Time Machine section for d Device	50
10. 1. 1.	Access the USB Device Locally	50
10. 1. 2.	Access the USB Device Remotely	51
10. 1. 3.	Customize the Access Settings	53
10. 2.	Media Sharing	55
10. 3.	Time Machine	56
Chapter 11.HomeShield		58
11. 1.	Network Check	59
11. 2.	Parental Controls	60
11. 3.	QoS	62
11. 4.	More Features	63
Chapter 12.EasyMesh with Seamless Roaming.....		66
12. 1.	Add a Router as a Satellite Device.....	67
12. 2.	Add a Range Extender as a Satellite Device	71
12. 3.	Manage Devices in the EasyMesh Network.....	72
Chapter 13.Network Security		74
13. 1.	Protect the Network from Cyber Attacks	75
13. 2.	Access Control	75
13. 3.	IP & MAC Binding	78
13. 4.	ALG	80
13. 5.	Device Isolation.....	81
Chapter 14.NAT Forwarding.....		83

14. 1. Share Local Resources on the Internet by Port Forwarding	84
14. 2. Open Ports Dynamically by Port Triggering.....	86
14. 3. Make Applications Free from Port Restriction by DMZ	87
14. 4. Make Xbox Online Games Run Smoothly by UPnP	88

Chapter 15.VPN Server&VPN Merge 90

15. 1. Use OpenVPN to Access Your Home Network.....	91
15. 2. Use PPTP VPN to Access Your Home Network	93
15. 3. Use L2TP/IPSec VPN to Access Your Home Network	97
15. 4. Use WireGuard VPN to Access Your Home Network	105
15. 5. Use VPN Merge (Multi-VPN Clients) to Access Remote VPN Servers	108

Chapter 16.Customize Your Network Settings..... 115

16. 1. Change the Internet Settings	116
16. 2. Change the LAN Settings	119
16. 3. Flow Controller	119
16. 4. Configure to Support IPTV Service.....	120
16. 5. Specify DHCP Server Settings	121
16. 6. Set Up a Dynamic DNS Service Account	123
16. 7. Create Static Routes.....	125

Chapter 17.Manage the Router 128

17. 1. Update the Firmware.....	129
17. 1. 1.Auto Update	129
17. 1. 2.Online Update	129
17. 1. 3.Local Update	130
17. 1. 4.EasyMesh Satellite Update.....	131
17. 2. Backup and Restore Configuration Settings.....	131
17. 3. Password Recovery.....	133
17. 4. Security Questions	134
17. 5. Change the Login Password	135
17. 6. Local Management	136
17. 7. Remote Management.....	137
17. 8. System Log.....	139
17. 9. Test the Network Connectivity	141
17. 10. Set System Time	142
17. 11. Set System Language	144
17. 12. Set the Router to Reboot Regularly.....	145
17. 13. Control the LED.....	145
17. 14. Set ECO Mode to Save Power.....	146

17. 15. Other System Settings.....148

Chapter 18.FAQ..... 150

About This Guide

This guide is a complement of Quick Installation Guide. The Quick Installation Guide instructs you on quick internet setup, and this guide provides details of each function and shows you the way to configure these functions appropriate to your needs.

Note: Features available in the router may vary by model and software version. Router availability may also vary by region or ISP. All images, steps, and descriptions in this guide are only examples and may not reflect your actual Router experience.

Conventions

In this guide the following conventions are used:

Convention	Description
<u>Underlined</u>	Underlined words or phrases are hyperlinks. You can click to redirect to a website or a specific section.
Teal	Contents to be emphasized and texts on the web page are in teal, including the menus, items, buttons, etc.
>	The menu structures to show the path to load the corresponding page. For example, Advanced > System > Firmware Update means the Firmware Update page is under the System menu that is located in the Advanced tab.
 Note:	Ignoring this type of note might result in a malfunction or damage to the device.
 Tips:	Indicates important information that helps you make better use of your device.
symbols on the web page	 Click to edit the corresponding entry.  Click to delete the corresponding entry.  click to enable or disable the corresponding entry.  Click to view more information about items on the page.

More Info

The latest software, management app and utility can be found at [Download Center](https://www.tp-link.com/support/download) at <https://www.tp-link.com/support/download>.

The Quick Installation Guide can be found where you find this guide or inside the package of the router.

Specifications can be found on the product page at <https://www.tp-link.com>.

TP-Link Community is provided for you to discuss our products and share knowledge at <https://community.tp-link.com>.

Our Technical Support contact information can be found at the [Contact Technical Support](https://www.tp-link.com/support) page at <https://www.tp-link.com/support>.

- * Maximum wireless signal rates are the physical rates derived from IEEE Standard 802.11 specifications. Higher capacity is based on laboratory test data, which analyzed the connections of different devices on the 6 GHz, 5 GHz, and 2.4 GHz bands simultaneously. These devices simulated a typical home scenario by running simultaneous applications in the same room that included 4K video, 1080p video, 720p video, file downloading, web browsing, IP cameras, and other IoT devices. Actual wireless data throughput, wireless coverage, and connected devices are not guaranteed and will vary as a result of internet service provider factors, network conditions, client limitations, and environmental factors, including building materials, obstacles, volume and density of traffic, and client location. Actual network speed may be limited by the rate of the product's Ethernet WAN or LAN port, the rate supported by the network cable, internet service provider factors, and other environmental conditions.
- * Significantly Lower Latency refers to the latency improvement of Wi-Fi 7 routers compared to Wi-Fi 6/6E routers, based on laboratory test data. The test conditions had the same 5 GHz or 6 GHz single-frequency wireless interference and tested the maximum latencies of Wi-Fi 7 clients (with MLO turned on) connecting to the 5 GHz and 6 GHz bands of Archer BE9300 (with MLO turned on) simultaneously and to the 5 GHz or 6 GHz bands of a Wi-Fi 6/6E router (without the MLO function).
- * Saving clients' battery power requires clients to also support the 802.11ax Wi-Fi standard. Actual power reduction may vary as a result of network conditions, client limitations, and environmental factors.
- * 2.5 Gbps internet speeds require compatible service plans and equipment. Actual network speed may be limited by the rate of the product's Ethernet WAN or LAN port, the rate supported by the network cable, internet service provider factors, and other environmental conditions.
- * Use of WPA3 requires clients to also support the corresponding feature.
- * Use of Wi-Fi 7 (802.11be), Wi-Fi 6 (802.11ax), and features including Multi-Link Operation (MLO), 320 MHz Bandwidth, 4K-QAM, Multi-RUs, OFDMA, and MU-MIMO requires clients to also support the corresponding features.
- * The 320 MHz bandwidth is only available on the 6 GHz band. Simultaneously, the 320 MHz bandwidth on the 6 GHz band and 160 MHz bandwidth on the 5 GHz band may be unavailable in some regions/countries due to regulatory restrictions. Double channel width and speed refer to 320 MHz compared to 160 MHz for Wi-Fi 6 routers.
- * Wi-Fi generations represent the wireless standard IEEE 802.11 a/b/g/n/ac/ax/be. All devices need to support 802.11 Wi-Fi protocols. Users may require an extra modem device that is compatible with their internet service provider to gain internet access.
- * HomeShield includes the Free Basic Plan. Fees apply for the Pro Plan. Visit tp-link.com/homeshield for more information.
- * TP-Link EasyMesh-compatible products can network with other devices that use EasyMesh. Failed connections may be due to firmware conflicts of different vendors. The EasyMesh-compatible function is still being developed on some models and will be supported in subsequent software updates.
- * This router may not support all the mandatory features as ratified in the IEEE 802.11be specification.
- * Further software upgrades for feature availability may be required.

Chapter 1

Get to Know About Your Router

This chapter introduces what the router can do and shows its appearance.

It chapter contains the following sections:

- [Product Overview](#)
- [Appearance](#)

1.1. Product Overview

TP-Link Wi-Fi 7 router, with the 802.11be Wi-Fi technology and the brand-new 6 GHz band, achieves Wi-Fi performance at its ultimate level. The new features of Wi-Fi 7 and 4k QAM dramatically improve throughput and increase the capacity and efficiency of the whole network. Access to the 6 GHz band brings more bandwidth, faster speeds, and lower latency, opening up resources for future innovations.

Moreover, it is simple and convenient to set up and use the TP-Link router due to its intuitive Tether app and powerful web interface.

1.2. Appearance

1.2.1. Front Panel

LED Explanation

Status	Indication
Cycling	The system is starting up or the router is being upgraded. Do not disconnect or power off your router.
Solid All LEDs	The router is working normally.

Status	Indication
Blinking Top 10 LEDs	Establishing a WPS connection.
Solid LED Exclamation Point	The router is disconnected from the internet.
Blinking LED Exclamation Point	The router is disconnected from the internet, and Wi-Fi is off.
Blinking All LEDs	Wi-Fi is off.
Off	Power is off or the LED is turned off.

Buttons

Three physical buttons are located on the front of the router.

Press the WPS button, and immediately press the WPS button on your client device to start the WPS process.

Press and hold this button for about 2 seconds to turn on or off the wireless function of your router.

Press the LED button to turn on or off the LED of your router.

1. 2. 2. Back Panel

The following parts are located on the back panel.

Item	Description
Power On/Off Button	Press this button to power on or off the router.
Power Port	For connecting the router to a power socket via the provided power adapter.
USB 3.0 Port	For connecting your USB storage devices to the router.
2.5Gbps Internet Port	For connecting to your modem or the Ethernet outlet.
2.5Gbps LAN Port (1)	For connecting your PC or other wired devices to the router.
1Gbps LAN Port (2-4)	For connecting your PC or other wired devices to the router.
Reset Button	Press and hold the button until the LED blinks to reset the router to its factory default settings.

Chapter 2

Connect the Hardware

This chapter contains the following sections:

- [Position Your Router](#)
- [Connect Your Router](#)

2.1. Position Your Router

- The product should not be located in a place where it will be exposed to moisture or excessive heat.
- Place the router in a location where it can be connected to multiple devices as well as to a power source.
- Make sure the cables and power cord are safely placed out of the way so they do not create a tripping hazard.
- The router can be placed on a shelf or desktop.
- Keep the router away from devices with strong electromagnetic interference, such as Bluetooth devices, cordless phones and microwaves.
- Generally, the router is placed on a horizontal surface, such as on a shelf or desktop.

2.2. Connect Your Router

1. Connect the powered-off modem to the router's 2.5 Gbps Internet port with an Ethernet cable.

2. Power on the modem, and then wait about 2 minutes for it to restart.
3. Connect the power adapter to the router. Then press the Power button to turn it on.
4. Wait until the LED is solid on (LED Exclamation Point or All LEDs).
5. Connect your computer to the router.

• Method 1: Wired

Turn off the Wi-Fi on your computer and connect the devices to the LAN port of your router.

• Method 2: Wirelessly

- 1) Find the SSIDs (Network Names) and Wireless Password printed on the label at the bottom of the router.

- 2) Click the network icon of your computer or go to Wi-Fi Settings of your smart device, and then select the SSID to join the network.

Chapter 3

Log In to Your Router

With a web-based utility, it is easy to configure and manage the router. The web-based utility can be used on any Windows, Mac OS or UNIX OS with a Web browser, such as Microsoft Internet Explorer, Mozilla Firefox or Apple Safari.

Follow the steps below to log in to your router.

1. Set up the TCP/IP Protocol in [Obtain an IP address automatically](#) mode on your computer.
2. Visit <http://tplinkwifi.net>, and create a login password for secure management purposes. Then click [Let's Get Started](#) to log in.

■ **Note:** If the login window does not appear, please refer to the [FAQ](#) Section.

A screenshot of a web browser window showing the TPLINK WiFi login page. The browser's address bar displays 'http://tplinkwifi.net'. The page content is titled 'Create an Local Password' and includes a sub-header: 'For security purposes, create a local password for login before starting the quick setup.' Below this, there are two input fields: 'New Password:' and 'Confirm Password:'. Each field has a small icon on the right side, likely for password strength or visibility. At the bottom of the form is a blue button labeled 'Let's Get Started'.

Chapter 4

Set Up Internet Connection

This chapter introduces how to connect your router to the internet. The router is equipped with a web-based Quick Setup wizard. It has necessary ISP information built in, automates many of the steps and verifies that those steps have been successfully completed. Furthermore, you can also set up an IPv6 connection if your ISP provides IPv6 service.

It contains the following sections:

- [Use Quick Setup Wizard](#)
- [Quick Setup Via TP-Link Tether App](#)
- [Manually Set Up Your Internet Connection](#)
- [Set Up the Router as an Access Point](#)
- [Set Up an IPv6 Internet Connection](#)

4.1. Use Quick Setup Wizard

The Quick Setup Wizard will guide you to set up your router.

☞ **Tips:**

If you need the IPv6 internet connection, please refer to the section of [Set Up an IPv6 Internet Connection](#).

Follow the steps below to set up your router.

1. Visit <http://tplinkwifi.net>, and log in with the password you set for the router.
2. Follow the step-by-step instructions to complete Quick Setup configuration or go to [Advanced](#) > [Quick Setup](#) for configuration to connect your router to the internet. Then follow the step-by-step instructions to connect your router to the internet.
3. To enjoy a more complete service from TP-Link (remote management, TP-Link DDNS, and more.), log in with your TP-Link ID or click [Sign Up Now](#) to get one. Then follow the instructions to bind the cloud router to your TP-Link ID.

■ **Note:**

- To learn more about the TP-Link Cloud service, please refer to the [TP-Link Cloud Service](#) section.
- If you do not want to register a TP-Link ID now, you may click [Skip](#) to proceed.
- If you have changed the preset wireless network name (SSID) and wireless password during the Quick Setup process, all your wireless devices must use the new SSID and password to connect to the router.

4.2. Quick Setup Via TP-Link Tether App

The Tether app runs on iOS and Android devices, such as smartphones and tablets.

1. Launch the Apple App Store or Google Play store and search “[TP-Link Tether](#)” or simply scan the QR code to download and install the app.

2. Launch the Tether app and log in with your TP-Link ID.

■ **Note:** If you don't have a TP-Link ID, create one first.

3. Tap the **+** button, tap **Add a Router** and select your product model.

■ **Note:** Due to Tether app updates, your actual user interface and pathway may differ from those depicted here.

4. Follow the steps to complete the setup and connect to the internet.

5. Connect your devices to the newly configured wireless networks of the router and enjoy the internet!

4. 3. Manually Set Up Your Internet Connection

In this part, you can check your current internet connection settings. You can also modify the settings according to the service information provided by your ISP.

Follow the steps below to check or modify your internet connection settings.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Internet**.
3. Select your internet connection type from the drop-down list.

Internet
Set up an internet connection with the service information provided by your ISP (internet service provider).

Internet Connection Type: Dynamic IP

Select this type if your ISP doesn't provide any information for internet connection.

4. Follow the instructions on the page to continue the configuration. Parameters on the figures are just used for demonstration.

- 1) If you choose **Dynamic IP**, you need to select whether to clone the MAC address. Dynamic IP users are usually equipped with a cable TV or fiber cable.

Internet
Set up an internet connection with the service information provided by your ISP (internet service provider).

Internet Connection Type: Dynamic IP
Select this type if your ISP doesn't provide any information for internet connection.

MAC Clone
Set the MAC address of your router. Use the default address unless your ISP allows internet access from only a specific MAC address.

Router MAC Address: Use Default MAC Address
00 - FF - 00 - 17 - 71 - A4

- 2) If you choose **Static IP**, enter the information provided by your ISP in the corresponding fields.

Internet
Set up an internet connection with the service information provided by your ISP (internet service provider).

Internet Connection Type: Static IP
Select this type if your ISP provides specific IP parameters.

IP Address:

Subnet Mask:

Default Gateway:

Primary DNS:

Secondary DNS: (Optional)

- 3) If you choose **PPPoE**, enter the **username** and **password** provided by your ISP. PPPoE users usually have DSL cable modems.

Internet
Set up an internet connection with the service information provided by your ISP (internet service provider).

Internet Connection Type: PPPoE
Select this type if your ISP only provides a username and password.

Username:

Password:

- 4) If you choose **L2TP**, enter the **username** and **password** and choose the **Secondary Connection** provided by your ISP. Different parameters are needed according to the Secondary Connection you have chosen.

Internet
Set up an internet connection with the service information provided by your ISP (internet service provider).

Internet Connection Type: L2TP

Select this type if your ISP provides L2TP VPN server information and an account. Some ISPs also provide specific IP parameters.

Username:

Password:

☒ Dynamic IP
☐ Static IP

VPN Server IP/Domain Name:

- 5) If you choose **PPTP**, enter the **username** and **password**, and choose the **Secondary Connection** provided by your ISP. Different parameters are needed according to the Secondary Connection you have chosen.

Internet
Set up an internet connection with the service information provided by your ISP (internet service provider).

Internet Connection Type: PPTP

Select this type if your ISP provides PPTP VPN server information and an account. Some ISPs also provide specific IP parameters.

Username:

Password:

☒ Dynamic IP
☐ Static IP

VPN Server IP/Domain Name:

5. Click **SAVE**.

 Tips:

- If you use **Dynamic IP** and **PPPoE** and you are provided with any other parameters that are not required on the page, please go to **Advanced > Network > Internet** to complete the configuration.
- If you still cannot access the internet, refer to the **FAQ** section for further instructions.

4.4. Set Up the Router as an Access Point

The router can work as an access point, transforming your existing wired network to a wireless one.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > System > Operation Mode**, select **Access Point** and click **SAVE**.
The router will reboot and switch to Access Point mode.

3. After rebooting, connect the router to your existing wired router via an Ethernet cable.
4. Log in again to the web management page <http://tplinkwifi.net>, and go to **Advanced > Quick Setup**.
5. Configure your wireless settings and click **Next**.
6. Confirm the information and click **SAVE**. Now, you can enjoy Wi-Fi.

☞ **Tips:**

- Functions, such as Parental Controls, QoS and NAT Forwarding, are not supported in the Access Point mode.
- Functions, such as Guest Network, are the same as those in the Router mode.

4. 5. Set Up an IPv6 Internet Connection

Your ISP provides information about one of the following IPv6 internet connection types: PPPoE, Dynamic IP(SLAAC/DHCPv6), Static IP, 6to4 tunnel, Pass-Through (Bridge). After setting up the IPv6 internet connection, you can add IPv6 firewall rules to protect your IPv6 network.

• Set up an IPv6 Internet Connection

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > IPv6**.
3. Enable IPv6 and select the internet connection type provided by your ISP.
4. You can also configure **DoT/DoH** to provide you with a more secure and private internet connection.

☞ **Tips:**

If you do not know what your internet connection type is, contact your ISP or judge according to the already known information provided by your ISP.

5. Fill in information as required by different connection types.

1) **Static IP:** Fill in blanks and click **SAVE**.

IPv6 Internet
Set up an IPv6 internet connection using the information provided by your ISP (internet service provider).

IPv6: ☒

Internet Connection Type:

IPv6 Address:

Default Gateway:

Primary DNS:

Secondary DNS:

MTU Size: bytes

Note: You can also configure [DoT/DoH](#) to provide you with a more secure and private internet connection.

2) **Dynamic IP(SLAAC/DHCPv6):** Click **Advanced Settings** to input further information if your ISP requires. Click **SAVE** and then click **RENEW**.

IPv6 Internet
Set up an IPv6 internet connection using the information provided by your ISP (internet service provider).

IPv6: ☒

Internet Connection Type:

IPv6 Address:

Primary DNS:

Secondary DNS:

[▶ Advanced Settings](#)

3) **PPPoE:** By default, the router uses the IPv4 account to connect to the IPv6 server. Click **Advanced Settings** to input further information if your ISP requires. Click **SAVE** and then click **CONNECT**.

Note:

If your ISP provides two separate accounts for the IPv4 and IPv6 connections, manually enter the username and password for the IPv6 connection.

IPv6 Internet

Set up an IPv6 internet connection using the information provided by your ISP (internet service provider).

IPv6: ☒

Internet Connection Type: PPPoE

☐ Share the same PPPoE session with IPv4

Username:

Password:

IPv6 Address:

[▶ Advanced Settings](#)

CONNECT

DISCONNECT

- 4) **6to4 Tunnel:** An IPv4 internet connection type is a prerequisite for this connection type ([Manually Set Up Your Internet Connection](#)). Click [Advanced Settings](#) to input further information if your ISP requires. Click [SAVE](#) and then click [CONNECT](#).

IPv6 Internet

Set up an IPv6 internet connection using the information provided by your ISP (internet service provider).

IPv6: ☒

Internet Connection Type: 6to4 Tunnel

IPv4 Address:

IPv4 Subnet Mask:

IPv4 Default Gateway:

Tunnel Address:

[▶ Advanced Settings](#)

CONNECT

DISCONNECT

- 5) **Pass-Through (Bridge):** Click [SAVE](#) and skip to Step 7.

IPv6 Internet

Set up an IPv6 internet connection using the information provided by your ISP (internet service provider).

IPv6:
☒

Internet Connection Type:

Pass-Through (Bridge) ▼

Note: You can also configure [DoT/DoH](#) to provide you with a more secure and private internet connection.

6. Configure LAN ports. Windows users are recommended to choose from DHCPv6 and SLAAC+Stateless DHCP. Fill in [Address Prefix](#) provided by your ISP, and click [SAVE](#). If your internet connection type is [Pass-Through \(Bridge\)](#), no configuration is required for this step.

IPv6 LAN

Configure the LAN IPv6 address of the router and set the configuration type to assign IPv6 addresses to the clients.

Assigned Type:

☐ ND Proxy
☐ DHCPv6
☒ SLAAC+Stateless DHCP
☐ SLAAC+RDNSS

Address Prefix:
/64

Address:

FE80::2FF:FE17:71A3/64

7. In **MAC Clone** section, set the MAC address of your router. Use the default address unless your ISP allows internet access from only a specific MAC address.

MAC Clone

Set the MAC address of your router. Use the default address unless your ISP allows internet access from only a specific MAC address.

Router MAC Address:

Use Default MAC Address ▼

00 - FF - 00 - 17 - 71 - A4

8. Go to [Internet](#) to check whether you have successfully set up an IPv6 connection.

Tips:

Visit the [FAQ](#) section if there is no internet connection.

• **Set up IPv6 Firewall Rules**

IPv6 Firewall protects your IPv6 network by preventing access from the internet. However, when you are hosting a service, such as a file sharing server in your local network, you can choose to allow access to the server from the internet by adding entries on this page. This feature is available only when you've set up an IPv6 connection.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.

2. Go to [Advanced](#) > [IPv6](#), enable IPv6 and locate the **Firewall Rules** section. If your internet connection type is Pass-Through (Bridge), you can not configure Firewall Rules.
3. Click [Add](#).

The screenshot shows the 'Firewall Rules' section. At the top, it says 'Firewall Rules' and 'Add IPv6 firewall rules to allow specific devices to access the specified services.' Below this is a table with columns: Service Name, Port, Protocol, Status, and Modify. The table is currently empty, with a message 'There is no entry!' displayed. An '+ Add' button is located in the top right corner of the table area.

4. Select a service from the drop-down list of Service Type. The Port and Protocol will be automatically filled in. It is recommended to keep the default Port and Protocol if you are unsure about which to use. If the service is not listed, please manually enter the Service Type, and specify the Port and Protocol.

The screenshot shows the 'Add Firewall Rule' dialog box. It has a title bar with 'Add Firewall Rule' and a close button. The form contains the following fields and buttons:

- Service Type: A dropdown menu with 'Custom' selected.
- Service Name: A text input field.
- Internal IP: A text input field.
- A button labeled 'VIEW CONNECTED DEVICES'.
- Port: A text input field with '21' entered.
- Protocol: A dropdown menu with 'TCP' selected.
- At the bottom right, there are two buttons: 'CANCEL' and 'ADD'.

5. Specify a Service Name for the rule.
6. In the Internal IP field, enter a valid IPv6 address to run the service. You can click [Select from clients](#), choose a local host device, and its IPv6 address will be automatically filled in as the Internal IP.
7. Click [SAVE](#), and the newly created IPv6 firewall rule will appear in Firewall Rules.

Firewall Rules

Add IPv6 firewall rules to allow specific devices to access the specified services.

Add

Service Name	Port	Protocol	Status	Modify
Example	21	TCP		

Chapter 5

TP-Link Cloud Service

TP-Link Cloud service provides a better way to manage your cloud devices. Log in to your router with a TP-Link ID, and you can easily monitor and manage your home network when you are out and about via the Tether app. To ensure that your router stays new and gets better over time, the TP-Link Cloud will notify you when an important firmware upgrade is available. Surely you can also manage multiple TP-Link Cloud devices with a single TP-Link ID.

This chapter introduces how to register a new TP-Link ID, bind or unbind TP-Link IDs to manage your router, and the Tether app with which you can manage your home network no matter where you may find yourself.

It contains the following sections:

- [Register a TP-Link ID](#)
- [Change Your TP-Link ID Information](#)
- [Manage the User TP-Link IDs](#)
- [Manage the Router via the TP-Link Tether App](#)

5.1. Register a TP-Link ID

If you have skipped the registration during the Quick Setup process, you can:

1. Visit <http://tplinkwifi.net>, and log in with the password you set for the router.
2. Go to [Advanced](#) > [TP-Link ID](#) or click [TP-Link ID](#) on the very top of the page.
3. Click [Sign Up](#) and follow the instructions to register a TP-Link ID.

TP-Link ID

Log in to bind the router to your TP-Link ID. You can remotely manage your network via the Tether app, and more.

TP-Link ID (Email):

Password:

Log In

[Sign Up](#) [Forgot Password?](#)

4. After activating your TP-Link ID, come back to the TP-Link ID page to log in. The TP-Link ID used to log in to the router for the first time will be automatically bound as an [Admin](#).

Note:

- To learn more about the [Admin](#) and [User](#) TP-Link ID, refer to [Manage the User TP-Link IDs](#).
- Once you have registered a TP-Link ID on the web management page, you can only register another TP-Link ID via the Tether APP. Please refer to [Manage the Router via the TP-Link Tether App](#) to install the app.
- If you want to unbind the admin TP-Link ID from your router, please go to [Advanced](#) > [TP-Link ID](#), and click [Unbind](#) in the [Device Information](#) section.

5.2. Change Your TP-Link ID Information

Follow the steps below to change your email address and password of your TP-Link ID as needed.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID.
2. Go to [Advanced](#) > [TP-Link ID](#), and focus on the [Account Information](#) section.

- **To change your email address:**

1. Click  behind the Email.
2. Enter the password of your TP-Link ID, then a new email address. And click [Save](#).

A dialog box titled "Change Email" with a close button (X) in the top right corner. It contains two input fields: "Password" with a key icon and "New Email" with an envelope icon. Below the fields is a teal "Save" button. At the bottom, a note states: "Note: New email or password may not sync to client devices immediately. Please log in again when your device is connected to the Internet to update account information."

- **To change your password:**

1. Click  behind the Password.
2. Enter the current password, then a new password twice. And click [Save](#).

A dialog box titled "Change Password" with a close button (X) in the top right corner. It contains three input fields: "Current Password", "New Password", and "Confirm Password", each with a key icon. Below the "New Password" field are three tabs: "Low", "Middle", and "High". Below the fields is a teal "Save" button. At the bottom, a note states: "Note: New email or password may not sync to client devices immediately. Please log in again when your device is connected to the Internet to update account information."

5.3. Manage the User TP-Link IDs

The TP-Link ID used to log in to the router for the first time will be automatically bound as the [Admin](#) account. An admin account can add or remove other TP-Link IDs to or

from the same router as **Users**. All accounts can monitor and manage the router locally or remotely, but user accounts cannot:

- Reset the router to its factory default settings either on the web management page or in the Tether app.
- Add/remove other TP-Link IDs to/from the router.

5.3.1. Add TP-Link ID to Manage the Router

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID.
2. Go to **Advanced > TP-Link ID**, and focus on the **Bound Accounts** section.
3. Click **+ Bind**, enter another TP-Link ID as needed and click **Save**.

Note: If you need another TP-Link ID, please register a new one via the Tether app. Refer to [Manage the Router via the TP-Link Tether App](#) to install the app and register a new TP-Link ID.

The image shows a modal dialog box titled "Add Account" with a close button (X) in the top right corner. Inside the dialog, there is a text input field with a blue envelope icon and the placeholder text "Email". Below the input field are two buttons: "Cancel" and "Save", both in a teal color.

4. The new TP-Link ID will be displayed in the Bound Accounts table as a **User**.

					+ Bind - Unbind	
☐	ID	Email	Binding Date	Role		
☐	1	dingpin_wang@163.com	2017/08/08	Admin		
☐	2	dingpinwang@163.com	2017/08/08	User		

5.3.2. Remove TP-Link ID(s) from Managing the Router

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID.
2. Go to **Advanced > TP-Link ID**, and focus on the **Bound Accounts** section.
3. Tick the checkbox(es) of the TP-Link ID(s) you want to remove and click **Unbind**.

Bound Accounts				
+ Bind − Unbind				
☐	ID	Email	Binding Date	Role
☐	1	thangpvt_123@pro.com	10/10/2018	Admin
☒	2	thangpvt123@pro.com	10/10/2018	User

5.4. Manage the Router via the TP-Link Tether App

The Tether app runs on iOS and Android devices, such as smartphones and tablets.

1. Launch the Apple App Store or Google Play store and search “TP-Link Tether” or simply scan the QR code to download and install the app.

2. Launch the Tether app and log in with your TP-Link ID.

Note: If you don't have a TP-Link ID, create one first.

3. Connect your device to the router's wireless network.
4. Go back to the Tether app, select the model of your router and log in with the password you set for the router.
5. Manage your router as needed.

Note: If you need to remotely access your router from your smart devices, you need to:

- Log in with your TP-Link ID. If you don't have one, refer to [Register a TP-Link ID](#).
- Make sure your smartphone or tablet can access the internet with cellular data or a Wi-Fi network.

Chapter 6

Network Map

Network Map outlines device connectivity of your network visually and helps you manage general settings of the network.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
 2. Go to [Network Map](#).
 3. Click each network device icon to check and manage general network settings.
- Click [Internet](#) to check internet status.

- Click the router to check device status and network settings. You can turn on or off the wireless network or guest network, or click [Edit](#) to change related settings.

- Click [Mesh Devices](#) to view the devices that form a mesh network with the router.

- Click **Clients** to view the client devices in your network. You can block devices so they cannot access your network, or set Speed Limit to limit their upload and download speeds.

To specify a Device Name for each client:

- Click  in the **Modify** column.
- Enter a Device Name for the device.
- Click **SAVE**.

To limit the speeds of a device:

- Click  in the **Modify** column.
- Enable **Speed Limit**.
- Set the download and upload speed limit according to your needs.
- Click **SAVE**. The speeds of the device will be limited.

Edit

Chapter 7

Wireless Settings

This chapter guides you on how to configure the wireless settings.

It contains the following sections:

- [Specify Wireless Settings](#)
- [Create Multiple Wireless Networks](#)
- [Schedule Your Wireless Function](#)
- [Use WPS for Wireless Connection](#)
- [Advanced Wireless Settings](#)

7.1. Specify Wireless Settings

The router's wireless network names (SSIDs), password, and security option are preset in the factory. The preset SSIDs and password can be found on the label of the router. You can customize the wireless settings according to your needs.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Wireless](#) or [Advanced > Wireless > Wireless Settings](#).

Wireless Settings

Personalize settings for each band or enable Smart Connect to configure the same settings for 2.4 GHz and 5 GHz bands.

TWT:

☐ Enabled ?

OFDMA/MU-MIMO:

Channel:

☒ Enable PSC ?

auto

Mode:

axbe_5

- **To enable or disable TWT:**

TWT (Target Wake Time) allows 802.11ax routers and clients to negotiate their periods to transmit and receive data packets. Clients only wake up at TWT sessions and remain in sleep mode for the rest of the time, which significantly extend their battery life. It is disabled by default.

1. Go to [Advanced](#) > [Wireless](#) > [Wireless Settings](#).
2. Enable [TWT](#).

- **To enable or disable OFDMA/MU-MIMO:**

OFDMA enables multiple users to transmit data simultaneously, and thus greatly improves speed and efficiency. Noted that only when your clients also support OFDMA, can you fully enjoy the benefits. It is disabled by default.

A router with the MU-MIMO feature serves multiple devices simultaneously while a traditional router serves only one user at a time. That means MU-MIMO can provide a faster, more efficient Wi-Fi network for multiusers. It is disabled by default.

■ Note: Devices supporting 5GHz wireless band can enjoy the MU-MIMO service.

1. Go to [Advanced](#) > [Wireless](#) > [Wireless Settings](#).
2. Select [OFDMA+MU-MIMO](#) or [OFDMA only](#).

- **To use the Smart Connect function:**

Smart Connect combines the 2.4 GHz and 5 GHz bands and assigns your devices between them to balance network demands, while leaving the brand-new 6 GHz band exclusive for your Wi-Fi 6E devices to unleash the most out of the latest Wi-Fi.

1. Go to [Advanced](#) > [Wireless](#) > [Wireless Settings](#).
2. Enable [Smart Connect](#).

3. Keep the default values or set a new SSID and password, and click [SAVE](#). This SSID and password will be applied for the 2.4 GHz and 5 GHz wireless networks. If you want to configure the wireless settings separately for each band, deselect the checkbox to disable this feature.

- **To enable or disable the wireless function:**

1. Go to [Wireless](#) or [Advanced](#) > [Wireless](#) > [Wireless Settings](#).
2. The wireless bands are enabled by default. If you want to disable a wireless band, just deselect its [Enable](#) checkbox.

- **To change the wireless network name (SSID) and wireless password:**

1. Go to [Wireless](#) or [Advanced](#) > [Wireless](#) > [Wireless Settings](#).

2. Create a new SSID in [Network Name \(SSID\)](#) and customize the password for the network in [Password](#). The value is case-sensitive. If Open is selected as the security type, no password is needed.

Note: If you change the wireless settings with a wireless device, you will be disconnected when the settings are effective. Please write down the new SSID and password for future use.

- **To hide SSID:**

1. Go to [Wireless](#) or [Advanced > Wireless > Wireless Settings](#).
2. Select [Hide SSID](#), and your SSID won't display when you scan for local wireless networks on your wireless device and you need to manually join the network.

- **To change the security option:**

1. Go to [Advanced > Wireless > Wireless Settings](#).
2. Select an option from the [Security](#) drop-down list. We recommend you don't change the default settings unless necessary.

- **To change the transmit power:**

1. Go to [Advanced > Wireless > Wireless Settings](#). Click [Advanced Settings](#) for further configuration.
2. Select an option from the [Transmit Power](#) drop-down list: [High](#), [Middle](#) or [Low](#). The default and recommended setting is [High](#).

- **To change channel settings:**

1. Go to [Advanced > Wireless > Wireless Settings](#). Click [Advanced Settings](#) for further configuration.
2. Select a [Channel Width](#) (bandwidth) for the wireless network. It is recommended to just leave it as default.
3. Select an operating [Channel](#) for the wireless network. It is recommended to leave the channel to [Auto](#) if you are not experiencing the intermittent wireless connection issue.
4. For the 6 GHz network, you can select the Enable [PSC](#) checkbox. When PSC (Preferred Scanning Channel) is enabled, only channels with higher connectivity will be reserved to ensure 6 GHz device connections.

- **To change the transmission mode:**

1. Go to [Advanced > Wireless > Wireless Settings](#).
2. For the 2.4 GHz and 5 GHz networks, disable [Smart Connect](#), then click [Advanced Settings](#) and select a transmission [Mode](#) according to your wireless client devices. It is recommended to just leave it as default.

For the [Mode](#) of the 6 GHz network, please keep the default settings.

- **To create your MLO network:**

MLO (Multi-Link Operation) network enables the connected Wi-Fi 7 clients to simultaneously send and receive data across different frequency bands, greatly improving the transmission rate and reliability.

1. Go to [Advanced](#) > [Wireless](#) > [Wireless Settings](#), and locate the **MLO Network** section.
2. Enable [MLO Network](#).
3. View the radio bands that the MLO network takes effect.
4. Specify an SSID in [Network Name \(SSID\)](#).
5. Select the [Security](#) type. Specify a password if the security type you selected requires it. This value is case-sensitive.
6. You can also click [Share Network](#) to share the SSID and password with your guests.
7. If you select [Hide SSID](#), your SSID won't display when you scan for local wireless networks on your wireless device and you need to manually join the MLO network.
8. Click [SAVE](#) to save your settings.

MLO Network
Create your MLO network, then its connected Wi-Fi 7 clients can simultaneously send and receive data across different frequency bands, greatly improving the transmission rate and reliability.

Tips:

To view the MLO network information, go to [Network Map](#) and locate the [Wireless](#) section. You can turn on or off the MLO network conveniently.

7.2. Create Multiple Wireless Networks

The Multi-Network feature allows you to create multiple wireless networks, enabling different network names, security types, and access permissions.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Wireless](#) > [Multi-Network](#).
3. Click [+Add](#).

Multi-Network
Create multiple wireless networks, enabling different network names, security types, and access permissions.

+ Add

Band	Description	Network Name (SSID)	Password	Bandwidth Control	Status	Modify
Click Add to add Multi-Network						

4. Specify the Basic Settings for the network you want to add.

- Enter a **Description** for the network.
- Select 2.4GHz, 5GHz or 6GHz **Band** from the dropdown list.
- Enter the **Network Name (SSID)**.
- Select a **Security** type and enter a password if required.

Add SSID X

7.3. Schedule Your Wireless Function

The wireless network can be automatically off at a specific time when you do not need the wireless connection.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Wireless](#) > [Wireless Schedule](#).
3. Enable the [Wireless Schedule](#) feature.

Wireless Schedule

Schedule when to automatically turn off your wireless network.

Wireless Schedule: ☒

Current Time: 2024-11-01 01:54:57 AM

Note: Before using this feature, make sure [System Time](#) is set to "Get from Internet".

[+ Add](#)

Wireless Off Time	Band	Repeat	Enable	Modify
There is no entry!				

4. Click [Add](#) to specify the wireless off band and the period during which you need the wireless off automatically, and click [SAVE](#).

Add Schedule ✕

Enable This Entry: ☒ Enabled

Band: ☒ 2.4 GHz ? ☒ 5 GHz ☒ 6 GHz

Wireless Off Time: 11 : 00 PM
07 : 00 AM (next day)

Repeat: ☒ S ☒ M ☒ T ☒ W ☒ T ☒ F ☒ S

[CANCEL](#) [SAVE](#)

Note:

- The Effective Time Schedule is based on the time of the router. You can go to [Advanced](#) > [System](#) > [Time & Language](#) to modify the time.
- The wireless network will be automatically turned on after the time period you set.
- If your network contains smart home devices (such as IoT devices), it is recommended to turn on the 2.4 GHz band and not to set the Wireless Off Time, so as to ensure a stable connection.

7.4. Use WPS for Wireless Connection

Wi-Fi Protected Setup (WPS) provides an easier approach to set up a security-protected Wi-Fi connection.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Make sure the Wi-Fi of your router is on and go to [Advanced](#) > [Wireless](#) > [WPS](#).

7.4.1. Connect via the Client's PIN

Enter the PIN of your device and click [Connect](#). Then your device will get connected to the router.

The screenshot shows the WPS configuration page. At the top, 'WPS:' is followed by a toggle switch that is turned on. Below this, 'Method 1: Using a PIN' is displayed. There are two radio button options: 'Client's PIN' (which is selected) and 'Router's PIN'. Below the options, a text prompt says 'Enter your personal device's PIN here and click **CONNECT**'. There is a text input field for the PIN and a blue button labeled 'CONNECT'.

7.4.2. Connect via the Router's PIN

Select [Router's PIN](#) in [Method 1](#) to enable [Router's PIN](#). You can use the default PIN or generate a new one.

The screenshot shows the 'Router's PIN' configuration section. It features a toggle switch for 'Router's PIN:' which is turned on. Below the toggle, a text prompt says 'Enter the router's PIN on your personal device.' followed by 'Router's PIN: **38337406**'. There are two blue buttons: 'GET NEW PIN' and 'DEFAULT'.

Note:

PIN (Personal Identification Number) is an eight-character identification number preset to each router. WPS supported devices can connect to your router with the PIN. The default PIN is printed on the label of the router.

7.4.3. Push the WPS Button

Click [Start](#) on the screen or directly press the router's WPS button. Within two minutes, enable WPS on your personal device. [Success](#) will appear on the screen, indicating successful WPS connection.

Method 2: Using the button below

Click the button below, then enable WPS on your personal device within 2 minutes.

Method 3: Using the router's WPS button

Press the router's WPS button, then enable WPS on your personal device within 2 minutes.

7.5. Advanced Wireless Settings

Check advanced wireless settings for your device.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Wireless](#) > [Additional Settings](#).
3. Configure advanced wireless settings.

Additional Settings

Check advanced wireless settings for your device.

WMM: ☒ Enabled

AP Isolation: ☐ Enabled

Airtime Fairness: ☐ Enabled

Beacon Interval:

RTS Threshold:

DTIM Interval:

Group Key Update Period: s

- **WMM** - WMM function can guarantee the packets with high-priority messages being transmitted preferentially.
- **AP Isolation** - This function isolates all connected wireless stations so that wireless stations cannot access each other through WLAN.
- **Airtime Fairness** - This function can improve the overall network performance by sacrificing a little bit of network time on your slow devices.
- **Beacon Interval** - Enter a value between 40 and 1000 in milliseconds to determine the duration between beacon packets that are broadcasted by the router to synchronize the wireless network. The default value is 100 milliseconds.
- **RTS Threshold** - Enter a value between 1 and 2346 to determine the packet size of data transmission through the router. By default, the RTS (Request to Send) Threshold size is 2346. If the packet size is greater than the preset threshold, the router will send RTS frames to a particular receiving station and negotiate the sending of a data frame.
- **DTIM Interval** - The value determines the interval of DTIM (Delivery Traffic Indication Message). Enter a value between 1 and 15 intervals. The default value is 1, which indicates the DTIM Interval is the same as Beacon Interval.
- **Group Key Update Period** - Enter a number of seconds (minimum 30) to control the time interval for the encryption key automatic renewal. The default value is 0, meaning no key renewal.

Chapter 8

Guest Network

This function allows you to provide Wi-Fi access for guests without disclosing your main network. When you have guests in your house, apartment, or workplace, you can create a guest network for them. In addition, you can customize guest network options to ensure network security and privacy.

It contains the following sections:

- [Create a Network for Guests](#)
- [Customize Guest Network Options](#)

8.1. Create a Network for Guests

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced** > **Wireless** > **Guest Network** or click **Wireless** on the top page. Locate the **Guest Network** section.
3. Create a guest network as needed.
 - 1) Tick the Enable checkbox for the 2.4GHz, 5 GHz, or 6GHz wireless network.
 - 2) Customize the SSID. Don't select **Hide SSID** unless you want your guests to manually input the SSID for guest network access.
 - 3) Enable **Bandwidth Control** if you want to limit the network speed of your guests. Then enter the limited bandwidth value.
 - 4) Set the effective time to keep the guest network.
 - 5) Select the **Security** type and customize your own password. If **Open** is selected, no password is needed to access your guest network.

Guest Network
Enable the wireless bands you want your guests to use and complete the related information.

2.4 GHz:

4. Click **SAVE**. Now your guests can access your guest network using the SSID and password you set!
5. You can also click **Sharing Network** to share the SSID and password to your guests.

 Tips:

To view guest network information, go to [Network Map](#) and locate the [Guest Network](#) section. You can turn on or off the guest network function conveniently.

8.2. Customize Guest Network Options

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Wireless](#) > [Guest Network](#). Locate the [Guest Permissions](#) section.
3. Customize guest network options according to your needs.

- [Allow guests to see each other](#)

Tick this checkbox if you want to allow the wireless clients on your guest network to communicate with each other via methods such as network neighbors and Ping.

- [Allow guests to access your local network](#)

Tick this checkbox if you want to allow the wireless clients on your guest network to communicate with the devices connected to your router's LAN ports or main network via methods such as network neighbors and Ping.

4. Click [SAVE](#). Now you can ensure network security and privacy!

Chapter 9

IoT Network

This feature further secures your home network by allowing you to create a dedicated wireless network to manage your IoT devices together, such as smart lights and cameras.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Wireless](#) > [IoT Network](#).
3. Create an IoT network as needed.
 - 1) Tick the Enable checkbox for the 2.4GHz, or 5 GHz wireless network. For the 5 GHz network, make sure your IoT devices can connect to a 5 GHz network.
 - 2) Customize the SSID. Don't select [Hide SSID](#) unless you want your IoT devices to manually input the SSID for network access.
 - 3) Select the [Security](#) type and customize your own password. If [Open](#) is selected, no password is needed to access the IoT network.

IoT Network

Create a dedicated wireless network to manage your IoT devices together, such as smart lights and cameras.

2.4 GHz:

4. Click [SAVE](#). Now you can connect your IoT devices to the dedicated IoT network.
5. You can also click [Sharing Network](#) to share the SSID and password to others.

Chapter 10

USB Settings

This chapter describes how to use the USB ports to share files and media from the USB storage devices over your home network locally, or remotely through the internet.

The router supports USB external flash drives and hard drives.

It contains the following sections:

- [Access the USB Storage Device](#)
- [Media Sharing](#)
- [Time Machine](#)

10.1. Access the USB Storage Device

Insert your USB storage device into the router's USB port and then access files stored there locally or remotely.

 Tips:

- If you use USB hubs, make sure no more than 4 devices are connected to the router.
- If the USB storage device requires using bundled external power, make sure the external power has been connected.
- If you use a USB hard drive, make sure its file system is FAT32, exFat, NTFS or HFS+.
- Before you physically disconnect a USB device from the router, safely remove it to avoid data damage: Go to [Advanced](#) > [USB](#) > [Storage Sharing](#) and click [Remove](#).

10.1.1. Access the USB Device Locally

Insert your USB storage device into the router's USB port and then refer to the following table to access files stored on your USB storage device.

Windows computer

- **Method 1:**

Go to [Computer](#) > [Network](#), then click the Network Server Name ([TP-SHARE](#) by default) in the [Computer](#) section.

 Note:

Operations in different systems are similar. Here we take Windows 7 as an example.

Windows computer

- **Method 2:**

Open the [Windows Explorer](#) (or go to [Computer](#)) and type the server address [\\tplinkwifi.net](#) or [ftp://tplinkwifi.net](#) in the address bar, then press [Enter](#).

Mac

- 1) Select [Go > Connect to Server](#).
- 2) Type the server address [smb://tplinkwifi.net](#).
- 3) Click [Connect](#).

- 4) When prompted, select the [Guest](#) radio box. (If you have set up a username and a password to deny anonymous access to the USB disks, you should select the [Registered User](#) radio box. To learn how to set up an account for the access, refer to [To Set Up Authentication for Data Security](#).)

Tablet

Use a third-party app for network files management.

Tips:

You can also access your USB storage device by using your Network/Media Server Name as the server address. Refer to [To Customize the Address of the USB Storage Device](#) to learn more.

10. 1. 2. Access the USB Device Remotely

You can access your USB disk outside the local area network. For example, you can:

- Share photos and other large files with your friends without logging in to (and paying for) a photo-sharing site or email system.
- Get a safe backup for the materials for a presentation.
- Remove the files on your camera's memory card from time to time during the journey.

Note:

If your ISP assigns a private WAN IP address (such as 192.168.x.x or 10.x.x.x), you cannot use this feature because private addresses are not routed on the internet.

Follow the steps below to configure remote access settings.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > USB > Storage Sharing**, and locate the **Access Method** session.
3. Tick the **Internet FTP** checkbox, and then click **SAVE**.

Access Method
 Select the method for accessing your USB storage device. The device can then be reached via the access address.

Network/Media Server Name:

Access Method	Address	Enable	Port	Modify
SMB for Windows SMB for macOS/Linux	\\192.168.1.1 smb://192.168.1.1	☒	---	
Local FTP	ftp://192.168.1.1:21	☒	21	
Internet FTP	ftp://192.168.0.100:21 Set DDNS	☐	21	

4. Refer to the following table to access your USB disk remotely.

Computer	1) Open the Windows Explorer (or go to Computer, only for Windows users) or open a web browser. 2) Type the server address in the address bar: Type in ftp://<WAN IP address of the router>:<port number> (such as ftp://59.40.2.243:21). If you have specified the domain name of the router, you can also type in ftp://<domain name>:<port number> (such as ftp://MyDomainName:21)  3) Press Enter on the keyboard. 4) Access with the username and password you set in To Set Up Authentication for Data Security.  Tips: You can also access the USB disk via a third-party app for network files management, which can resume broken file transfers.
Tablet	Use a third-party app for network files management.

 Tips:

Click [Set Up a Dynamic DNS Service Account](#) to learn how to set up a domain name for you router.

10. 1. 3. Customize the Access Settings

By default, all the network clients can access all folders on your USB disk. You can customize your sharing settings by setting a sharing account, sharing specific contents and setting a new sharing address on the router's web management page.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [USB](#) > [Storage Sharing](#).

- **To Customize the Address of the USB Storage Device**

You can customize the server name and use the name to access your USB storage device.

1. In the [Access Method](#) session, make sure [Samba for Windows Samba for macOS/Linux](#) is ticked, and enter a [Network/Media Server Name](#) as you like, such as [MyShare](#), then click [SAVE](#).

Access Method

Select the method for accessing your USB storage device. The device can then be reached via the access address.

Network/Media Server Name:

Access Method	Address	Enable	Port	Modify
SMB for Windows SMB for macOS/Linux	\\192.168.1.1 smb://192.168.1.1	☒	---	
Local FTP	ftp://192.168.1.1:21	☒	21	
Internet FTP	ftp://192.168.0.100:21 Set DDNS	☒	21	

- Now you can access the USB storage device by visiting <\\MyShare> (for Windows) or <smb://MyShare> (for Mac).

- To Only Share Specific Content**

Focus on the [File Sharing](#) section. Specify sharing folders that you want to share and click [SAVE](#).

Sharing Contents:

Share Selected Folders

☒ G:/Document
G:/Pictures

- To Set Up Authentication for Data Security**

You can set up authentication for your USB storage device so that network clients will be required to enter username and password when accessing the USB storage device.

- In the [File Sharing](#) section, enable [Secure Sharing](#).

Secure Sharing			
Customize the access settings to ensure data security.			
Username	Password	Permissions	Modify
admin		 Read&Write	
visit		 Read	

- Click  to modify the access account, and pay attention to the default username and password. Accessing as an administrator can read and modify the shared folders while visitors can only read the shared folders.

Note:

- For Windows users, do not set the sharing username the same as the Windows username. Otherwise, Windows credential mechanism may cause the following problems:
 - If the sharing password is also the same as the Windows password, authentication will not work since the Windows will automatically use its account information for USB access.
 - If the sharing password is different from the Windows password, the Windows will be unable to remember your credentials and you will always be required to enter the sharing password for USB access.
- Due to Windows credential mechanism, you might be unable to access the USB disk after changing Authentication settings. Please log out from the Windows and try to access again. Or you can change the address of the USB disk by referring to [To Customize the Address of the USB Storage Device](#).

10.2. Media Sharing

The feature of **Media Sharing** allows you to view photos, play music and watch movies stored on the USB storage device directly from DLNA-supported devices, such as your computer, tablet and PS2/3/4.

- Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
- Go to **Advanced > USB > Storage Sharing**. Locate the **Media Sharing** section.
- Enable **Media Sharing**.

- When your USB storage device is inserted into the router, your DLNA-supported devices (such as your computer and pad) connected to the router can detect and play the media files on the USB storage devices.
- Refer to the following table for detailed instructions.

Windows Computer	Go to Computer > Network, then click the Media Server Name (<u>Model number-share</u> by default) in the Media Devices section. Note: Here we take Windows 7 as an example.  The screenshot shows the Windows 7 Network window. The address bar at the top indicates the current location is 'Network'. The left sidebar contains a list of navigation options: Favorites, Libraries, Homegroup, Computer, and Network. The 'Network' option is selected and highlighted with a yellow border. The main pane on the right displays a tree view of network resources. Under the 'Media Devices' section, which is also highlighted with a yellow border, there is a single device icon labeled 'Archer_2881'.
Tablet	Use a third-party DLNA-supported player.

10.3. Time Machine

Time Machine backs up all files on your Mac computer to a USB storage device connected to your router.

- Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
- Go to **Advanced** > **USB** > **Time Machine**.

Time Machine

Back up all files on your Mac to a USB storage device connected to your router.

Time Machine: ☒ Enabled

Backup Location: ---

[SELECT](#)

Storage Limit for Backups: GB

How to Use Time Machine:

Step 1:

Connect your Mac to the router's Wi-Fi, open **System Preferences** and click **Time Machine**.

Step 2:

Click **Select Backup Disk...** then select **BackupTM**.

Step 3:

Enter the USB storage device's shared account and click **Connect**.

Notes:

1. We recommend you use a wired connection for the backup to get higher speed.
2. Please safely remove the HDD from the router first before you restart the router or unplug the HDD. HDD may be damaged if the router is abnormally powered off or HDD is disconnected during file transfer.
3. Initial backup may take some time depending on the size of your OSX volume. Consider starting the first backup in the evening so it will complete overnight.

3. Tick the checkbox to enable **Time Machine**.
4. Click **SELECT** to select a location for Time Machine backups.
5. Set the **Storage Limit for Backups**.
 ■ Note: 0 means no limit for the space.
6. Click **SAVE**.

Chapter 11

HomeShield

Customize your home network with enhanced security using a kit of features built in TP-Link HomeShield. Whether protecting your sensitive data or limiting the access of kids and guests, TP-Link HomeShield provides you the tools you need to fully manage your network.

It contains the following sections:

- [Network Check](#)
- [Parental Controls](#)
- [QoS](#)
- [More Features](#)

*For an easier way to check your home network protection system, you can download the Tether app to enjoy full Homeshield Pro feature.

11.1. Network Check

Scan your whole network to help analyze and optimize your network.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **HomeShield > Network Check**, or **Advanced > HomeShield > Network Check**.
3. Click **SCAN**.

Network Check

Check your network for better network performance and security.

Click **SCAN** to start checking your network.

11.2. Parental Controls

Parental Controls allows you to set up unique restrictions on internet access for each member of your family. You can block inappropriate content, set daily limits for the total time spent online and restrict internet access to certain times of the day.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [HomeShield > Parental Controls](#), or [Advanced > HomeShield > Parental Controls](#).

Parental Controls
Easily manage your kid's online activities by blocking inappropriate content, setting online time limits, and creating flexible schedules.

Current Time: 2024-11-01 12:28:40 AM

Note: To get accurate time, controls that take effect based on system time, go to [Time Settings](#) to check Get from Internet is selected.

Tina	0	 1  0			 

Note: You can go to **HomeShield > More Features** or **Advanced > HomeShield > More Features** for a detailed introduction and download Tether to enjoy full HomeShield Pro feature.

11.3. QoS

QoS (Quality of Service) allows you to prioritize connection of specific devices for a set duration. Devices set as high priority will be allocated more bandwidth and so continue to run smoothly even when there is heavy traffic on the network.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.

2. Go to [HomeShield > QoS](#) or [Advanced > HomeShield > QoS](#).
3. Enable [QoS](#) to set the total bandwidth. Then click [SAVE](#).
4. Enable [High Priority](#) for the desired device and set its effective time.

Global Settings

Prioritize the Internet traffic of specific device to guarantee a faster connection.

Chapter 12

EasyMesh with Seamless Roaming

This product is compatible with EasyMesh. This chapter introduces the EasyMesh feature.

It contains the following sections:

- [Add a Router as a Satellite Device](#)
- [Add a Range Extender as a Satellite Device](#)
- [Manage Devices in the EasyMesh Network](#)

EasyMesh routers and extenders work together to form one unified Wi-Fi network. Walk through your home and stay connected with the fastest possible speeds thanks to EasyMesh's seamless coverage.

 **Note:** Routers and range extenders must be compatible with EasyMesh or OneMesh™. Firmware upgrades may be required.

12.1. Add a Router as a Satellite Device

Method 1. Via an Ethernet cable

1. Connect your router's LAN port to the satellite device's LAN port via an Ethernet cable.
2. Connect the power adapter to the satellite device, then power on and reset it. Then the device will be added to the network automatically.

 **Note:** You can check whether the router is added to the network on your router's web management page or the Tether app.

Method 2. Via the WPS button

1. Place the router next to your router, then power on and reset it.
2. Press the WPS button on your router.
3. Press the WPS button on the new router within 2 minutes. Then the router will be added to the network automatically.

 **Note:** You can check whether the router is added to the network on your router's web management page or the Tether app.

Method 3. Via the Tether app

1. Connect your Laptop/PC/Mobile phone to your router's Wi-Fi.
2. Open the Tether app, select your router and log in with your TP-Link ID.

3. Go to **More** > **EasyMesh**, turn on the EasyMesh button.

4. Tap **Add Satellite Devices**. Then select a satellite device type and follow the step-by-step instructions to add another router.

Note: After being successfully added to the EasyMesh network, the satellite device will appear in the EasyMesh Network list.

Method 4. Via the web browser

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced** > **EasyMesh**, and enable **EasyMesh**.

EasyMesh

Connect EasyMesh and OneMesh devices to create a mesh network for seamless Wi-Fi coverage and centralized management.

EasyMesh: ☒

[▶ What's EasyMesh?](#)

EasyMesh Network

Set up and manage your EasyMesh network.

Current Mode: Main Router [↔ Change Mode](#)

In this mode, you can add EasyMesh and OneMesh devices to boost Wi-Fi coverage.

Note: TP-Link satellite routers will follow the main router's [LED Control Settings](#).

☐ Ethernet ☐ Wireless

Archer

3. Locate the **Mesh Device Detail** section and click [+ Add](#) . Select **TP-Link Router**, then click **NEXT**.

Add Satellite Devices

×

Which type of satellite devices do you want to add?

TP-Link Router
(Includes TP-Link EasyMesh and OneMesh routers)

TP-Link Extender
(Includes TP-Link EasyMesh and OneMesh extenders)

Others
(Includes EasyMesh devices of other brands)

CANCEL

NEXT

4. Follow the page instructions to prepare your satellite router, then click **DONE**.

Prepare your TP-Link satellite routers:

1. Make sure your routers support EasyMesh or OneMesh. A firmware update may be required for earlier OneMesh models to support router-router networking.
2. Plug in the routers near your main router.
3. Reset them to their factory settings or change them to Satellite Router mode.

DONE

5. Click **ADD**. When prompted "This device has been added successfully", click **OK**, then click **FINISH**.

Add TP-Link Satellite Routers

Search for nearby TP-Link satellite routers, and add them to the mesh network.

[How to change the router to Satellite Router mode?](#)

 Archer BE7000 7C:F3:8C:00:00:00 192.168.1.57	Not set	0		  

12.2. Add a Range Extender as a Satellite Device

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced** > **EasyMesh**, and enable **EasyMesh**.

3. Locate the **Mesh Device Detail** section and click **+ Add**. Select **TP-Link Extender**, then click **NEXT**.

4. Follow the page instructions to prepare your satellite extender, then click **OK**.

5. Done! You can check the mesh device on the router's web page now.

12.3. Manage Devices in the EasyMesh Network

In an EasyMesh network, you can manage all mesh devices and connected clients on your main router's web page.

- **To view mesh devices and connected clients in the network:**

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Network Map**.
3. Click  to view all mesh devices, and click  to view all connected clients.

- **To manage an EasyMesh device in the network:**

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > EasyMesh**.

3. Click the Modify button to view detailed information and change its settings.

Chapter 13

Network Security

This chapter guides you on how to protect your home network from cyber attacks and unauthorized users by implementing these three network security functions. You can protect your home network from cyber attacks, block or allow specific client devices to access your network using Access Control, you can prevent ARP spoofing and ARP attacks using IP & MAC Binding, protect your network security by isolating your IoT devices.

It contains the following sections:

- [Protect the Network from Cyber Attacks](#)
- [Access Control](#)
- [IP & MAC Binding](#)
- [ALG](#)
- [Device Isolation](#)

*For a more comprehensive home network protection system, refer to the [HomeShield](#) chapter.

13.1. Protect the Network from Cyber Attacks

The SPI (Stateful Packet Inspection) Firewall protects the router from cyber attacks and validate the traffic that is passing through the router based on the protocol. This function is enabled by default.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Security](#) > [Firewall](#). It's recommended to keep the default settings.

Firewall

Check the settings of the firewall that protects your network. It is recommended to keep them as default.

SPI Firewall: ☒

Respond to Pings from LAN: ☒

Respond to Pings from WAN: ☐

13.2. Access Control

Access Control is used to block or allow specific client devices to access your network (via wired or wireless) based on a list of blocked devices (Deny List) or a list of allowed devices (Allow List).

I want to:

Block or allow specific client devices to access my network (via wired or wireless).

How can I do that?

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Security](#) > [Access Control](#).
3. Toggle on to enable [Access Control](#).
4. Click [Change Mode](#) to select the access mode to either block (recommended) or allow the device(s) in the list.

Change Mode X

☒ Deny List
Configure a deny list to only block access to your network from the specified devices.

☐ Allow List
Configure a allow list to only allow access to your network from the specified devices.

CANCEL CHANGE

To block specific device(s):

- 1) Select [Deny List](#).

Access Control
Control the access to your network from the specified devices.

Access Control: ☒

Current Mode: Deny List [↔ Change Mode](#)

[+ Add](#)

Device Type	Device Name	MAC Address	Modify
There is no entry!			

- 2) Click [+ Add](#) and select devices you want to be blocked. You can select from the device list or add it manually. Click [ADD](#).

MAC Address:

- 4) The **Operation Succeeded** message will appear on the screen, which means the selected devices have been successfully added to the Allow List.

Device Type	Device Name	MAC Address	Modify
		D8-44-89-E1- 	
		B0-19-21-A1- 	

Done!

Now you can block or allow specific client devices to access your network (via wired or wireless) using the [Deny List](#) or [Allow List](#).

13.3. IP & MAC Binding

IP & MAC Binding, namely, ARP (Address Resolution Protocol) Binding, is used to bind network device's IP address to its MAC address. This will prevent ARP Spoofing and other ARP attacks by denying network access to an device with matching IP address in the Binding list, but unrecognized MAC address.

I want to:

Prevent ARP spoofing and ARP attacks.

How can I do that?

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.

2. Go to [Advanced](#) > [Security](#) > [IP & MAC Binding](#).
3. Enable [IP & MAC Binding](#).

IP & MAC Binding
Bind the MAC and IP addresses of devices to prevent ARP spoofing and attacks.
IP & MAC Binding: ☒

4. Bind your device(s) according to your need.

To bind the connected device(s):

- 1) Click  [Add](#) in the [Binding List](#) section.

Binding List
Add or delete binding entries.
 [Add](#)

Device Name	MAC Address	IP Address	Modify
No Entries			

- 2) Click [VIEW CONNECTED DEVICES](#) and select the device you want to bind. The [MAC Address](#) and [IP Address](#) fields will be automatically filled in.

Add Binding Entry

[VIEW CONNECTED DEVICES](#)

IP Address:

[CANCEL](#) [SAVE](#)

- 3) Click [SAVE](#).

To bind the unconnected device:

- 1) Click  [Add](#) in the [Binding List](#) section.

Binding List
Add or delete binding entries.

Add

Device Name	MAC Address	IP Address	Modify
No Entries			

2) Enter the **MAC Address** and **IP Address** that you want to bind.

Add Binding Entry ×

MAC Address:

VIEW CONNECTED DEVICES

IP Address:

CANCEL

SAVE

3) Click **SAVE**.

Done!

Now you don't need to worry about ARP spoofing and ARP attacks!

13.4. ALG

ALG allows customized NAT traversal filters to be plugged into the gateway to support address and port translation for certain application layer "control/data" protocols such as FTP, TFTP, H323 etc. It is recommended to keep the default settings.

You may need to disable SIP ALG when you are using voice and video applications to create and accept a call through the router, since some voice and video communication applications do not work well with SIP ALG.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > Security > ALG**.

ALG

Check the ALG (Application Layer Gateway) settings. It is recommended to keep them as default.

PPTP Passthrough:	☒

13.5. Device Isolation

Some devices, such as IoT devices, are vulnerable to security threats. To keep your important devices and data safe, you can isolate these devices to protect your network from being infected.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > Security > Device Isolation**. Enable **Device Isolation**.

Device Isolation

Isolate devices (such as IoT devices) to protect your network from security threats.

Device Isolation: ☒ ?

Note: We recommend disabling **AP Isolation** which may isolate all devices from each other.

Isolated Devices

Isolated Devices: 0 [+ Add](#)

Device Type	Device Name	MAC Address	Modify
Click Add to add devices that need to be isolated.			

3. Click **+Add** to add your IoT devices.

Add Devices

Main Network (1/2)

	Device Type	Device Name	MAC Address
☐		iPhone-Hotspot	D0-A6-37-83-DA-99
☒		TE	FC-34-97-BC-F9-34

CANCEL

ADD

Done!

While isolated, isolated devices (these devices) can still access the internet and communicate with other isolated devices. However, isolated devices (these devices) cannot transfer data with devices on your home, including managing gateway devices, accessing USB devices, etc.

Chapter 14

NAT Forwarding

The router's NAT (Network Address Translation) feature makes devices on the LAN use the same public IP address to communicate with devices on the internet, which protects the local network by hiding IP addresses of the devices. However, it also brings about the problem that an external host cannot initiatively communicate with a specified device on the local network.

With the forwarding feature the router can penetrate the isolation of NAT and allows devices on the internet to initiatively communicate with devices on the local network, thus realizing some special functions.

The TP-Link router supports four forwarding rules. If two or more rules are set, the priority of implementation from high to low is Port Forwarding, Port Triggering, UPnP and DMZ.

It contains the following sections:

- [Share Local Resources on the Internet by Port Forwarding](#)
- [Open Ports Dynamically by Port Triggering](#)
- [Make Applications Free from Port Restriction by DMZ](#)
- [Make Xbox Online Games Run Smoothly by UPnP](#)

14. 1. Share Local Resources on the Internet by Port Forwarding

When you build up a server on the local network and want to share it on the internet, Port Forwarding can realize the service and provide it to internet users. At the same time Port Forwarding can keep the local network safe as other services are still invisible from the internet.

Port Forwarding can be used for setting up public services on your local network, such as HTTP, FTP, DNS, POP3/SMTP and Telnet. Different services use different service ports. Port 80 is used in HTTP service, port 21 in FTP service, port 25 in SMTP service and port 110 in POP3 service. Please verify the service port number before the configuration.

I want to:

Share my personal website I've built in local network with my friends through the internet.

For example, the personal website has been built on my home PC (192.168.0.100). I hope that my friends on the internet can visit my website in some way. The PC is connected to the router with the WAN IP address 218.18.232.154.

*Image may differ from your actual product.

How can I do that?

1. Assign a static IP address to your PC, for example 192.168.0.100.
2. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
3. Go to **Advanced > NAT Forwarding > Port Forwarding**.
4. Click  **Add**.

Port Forwarding

Specify ports to make specific devices or services on your local network accessible over the internet.

[+ Add](#)

Service Name	Device IP Address	External Port	Internal Port	Protocol	Status	Modify
There is no entry!						

- Click [VIEW COMMON SERVICES](#) and select [HTTP](#). The [External Port](#), [Internal Port](#) and [Protocol](#) will be automatically filled in.
- Click [VIEW CONNECTED DEVICES](#) and select your home PC. The [Device IP Address](#) will be automatically filled in. Or enter the PC's IP address 192.168.0.100 manually in the [Device IP Address](#) field.
- Click [SAVE](#).

Add a Port Forwarding Entry ✕

Note: Add a rule for an individual external port or port range. For nonconsecutive ports (example: 100 and 200), add multiple rules. For more info, refer to [Port Forwarding FAQ](#).

Service Name:

[VIEW COMMON SERVICES](#)

Device IP Address:

[VIEW CONNECTED DEVICES](#)

External Port: ☒ Individual Port ☐ Port Range

Internal Port: (Optional)

Protocol: ▼

Enable This Entry: ☒ Enabled

[CANCEL](#) [SAVE](#)

Tips:

- It is recommended to keep the default settings of [Internal Port](#) and [Protocol](#) if you are not clear about which port and protocol to use.
- If the service you want to use is not in the common services list, you can enter the corresponding parameters manually. You should verify the port number that the service needs.
- You can add multiple port forwarding rules if you want to provide several services in a router. Please note that the [External Port](#) should not be overlapped.

Done!

Users on the internet can enter [http:// WAN IP](http://WAN_IP) (in this example: [http:// 218.18.232.154](http://218.18.232.154)) to visit your personal website.

Tips:

- The WAN IP should be a public IP address. For the WAN IP is assigned dynamically by the ISP, it is recommended to apply and register a domain name for the WAN referring to [Set Up a Dynamic DNS Service Account](#). Then users on the internet can use [http:// domain name](http://domain_name) to visit the website.
- If you have changed the default **External Port**, you should use [http:// WAN IP: External Port](http://WAN_IP:External_Port) or [http:// domain name: External Port](http://domain_name:External_Port) to visit the website.

14. 2. Open Ports Dynamically by Port Triggering

Port Triggering can specify a triggering port and its corresponding external ports. When a host on the local network initiates a connection to the triggering port, all the external ports will be opened for subsequent connections. The router can record the IP address of the host. When the data from the internet return to the external ports, the router can forward them to the corresponding host. Port Triggering is mainly applied to online games, VoIPs, video players and common applications including MSN Gaming Zone, Dialpad and Quick Time 4 players, etc.

Follow the steps below to configure the Port Triggering rules:

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > NAT Forwarding > Port Triggering** and click  **Add**.

3. Click **VIEW COMMON SERVICES**, and select the desired application. The **Triggering Port**, **Triggering Protocol** and **External Port** will be automatically filled in. The following picture takes application **MSN Gaming Zone** as an example.

Add a Port Triggering Entry X

Service Name: MSN Gaming Zone

VIEW COMMON SERVICES

Triggering Port: 47624

Triggering Protocol: All

External Port: 2300-2400,28800-29000
(XX or XX-XX, 1-65535, at most 5 pairs)

External Protocol: All

Enable This Entry: ☒ Enabled

CANCEL SAVE

4. Click **SAVE**.

Tips:

- You can add multiple port triggering rules according to your network need.
- The triggering ports can not be overlapped.
- If the application you need is not listed in the Existing Applications list, please enter the parameters manually. You should verify the external ports the application uses first and enter them into [External Port](#) field according to the format the page displays.

14.3. Make Applications Free from Port Restriction by DMZ

When a PC is set to be a DMZ (Demilitarized Zone) host on the local network, it is totally exposed to the internet, which can realize the unlimited bidirectional communication between internal hosts and external hosts. The DMZ host becomes a virtual server with all ports opened. When you are not clear about which ports to open in some special applications, such as IP camera and database software, you can set the PC to be a DMZ host.

Note: When DMZ is enabled, the DMZ host is totally exposed to the internet, which may bring some potential safety hazards. If DMZ is not in use, please disable it in time.

I want to:

Make the home PC join the internet online game without port restriction.

[For example](#), due to some port restriction, when playing the online games, you can log in normally but cannot join a team with other players. To solve this problem, set your PC as a DMZ host with all ports open.

How can I do that?

1. Assign a static IP address to your PC, for example 192.168.0.100.
2. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
3. Go to [Advanced](#) > [NAT Forwarding](#) > [DMZ](#) and tick to enable DMZ.
4. Click [VIEW CONNECTED DEVICES](#) and select your PC. The [Device IP Address](#) will be automatically filled in. Or enter the PC's IP address 192.168.0.100 manually in the [DMZ Host IP Address](#) field.

5. Click [SAVE](#).

Done!

The configuration is completed. You've set your PC to a DMZ host and now you can make a team to game with other players.

14.4. Make Xbox Online Games Run Smoothly by UPnP

The UPnP (Universal Plug and Play) protocol allows applications or host devices to automatically find the front-end NAT device and send request to it to open the corresponding ports. With UPnP enabled, the applications or host devices on the local network and the internet can freely communicate with each other thus realizing the seamless connection of the network. You may need to enable the UPnP if you want to use applications for multiplayer gaming, peer-to-peer connections, real-time communication (such as VoIP or telephone conference) or remote assistance, etc.

Tips:

- UPnP is enabled by default in this router.
- Only the application supporting UPnP protocol can use this feature.
- UPnP feature needs the support of operating system (e.g. Windows Vista/ Windows 7/ Windows 8, etc. Some of operating system need to install the UPnP components).

For example, when you connect your Xbox to the router which has connected to the internet to play online games, UPnP will send request to the router to open the corresponding ports allowing the following data penetrating the NAT to transmit. Therefore, you can play Xbox online games without a hitch.

*Image may differ from your actual product.

If necessary, you can follow the steps to change the status of UPnP.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced** > **NAT Forwarding** > **UPnP** and toggle on or off according to your needs.

UPnP
Enable UPnP (Universal Plug and Play) to allow devices on your local network to dynamically open ports for applications such as multiplayer gaming and real-time communications.

UPnP: ☒

Note: If you're not using networked devices that require port forwarding such as IP camera, NAS, PS5, or XBOX, it's recommended to disable UPnP to improve your network security.

UPnP Client List
Displays the UPnP device information.

Total Clients: 0 [Refresh](#)

There is no entry!				

Chapter 15

VPN Server&VPN Merge

The router offers several ways to set up VPN connections:

VPN Server allows remote devices to access your home network in a secured way through the internet. The router supports three types of VPN Server:

OpenVPN is somewhat complex but with higher security and more stability, suitable for restricted environments such as campus network and company intranet.

PPTP VPN is easy to use with the built-in VPN software of computers and mobile devices, but it is vulnerable and may be blocked by some ISPs.

L2TP/IPSec VPN is more secure but slower than PPTP VPN, and may have trouble getting around firewalls.

WireGuard VPN is a secure, fast and modern VPN protocol. It is based on the UDP protocol and uses modern encryption algorithms to improve work efficiency.

VPN Merge (Multi-VPN Clients) allows your client devices to simultaneously access multiple VPN servers to satisfy your work, gaming, and video streaming needs.

This chapter contains the following sections:

- [Use OpenVPN to Access Your Home Network](#)
- [Use PPTP VPN to Access Your Home Network](#)
- [Use L2TP/IPSec VPN to Access Your Home Network](#)
- [Use WireGuard VPN to Access Your Home Network](#)
- [Use VPN Merge \(Multi-VPN Clients\) to Access Remote VPN Servers](#)

15.1. Use OpenVPN to Access Your Home Network

OpenVPN Server is used to create an OpenVPN connection for remote devices to access your home network.

To use the VPN feature, you need to enable OpenVPN Server on your router, and install and run VPN client software on remote devices. Please follow the steps below to set up an OpenVPN connection.

*Image may differ from your actual product.

Step1. Set up OpenVPN Server on Your Router

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > VPN Server > OpenVPN**, and tick the **Enable** box of **OpenVPN**.

OpenVPN

Set up an OpenVPN for secure, remote access to your network.

Note: No certificate has been created. Generate one below before enabling OpenVPN.

OpenVPN: ☒ Enabled

Service Type: ☒ UDP ☐ TCP

Interface Type:

Service Port:

VPN Subnet:

Netmask:

Client Access:

Note:

- Before you enable VPN Server, we recommend you configure Dynamic DNS Service (recommended) or assign a static IP address for router's WAN port and synchronize your System Time with internet.
- The first time you configure the OpenVPN Server, you may need to generate a certificate before you enable the VPN Server.

3. Select the **Service Type** (communication protocol) for OpenVPN Server: UDP, TCP.

4. Select the **Interface Type** for OpenVPN Server: TUN, TAP. You can select TAP to address the limitations of the traditional TUN mode such as the inability to support broadcast packets and seamless integration of local networks.
5. Enter a VPN **Service Port** to which a VPN device connects, and the port number should be between 1024 and 65535.
6. In the **VPN Subnet/Netmask** fields, enter the range of IP addresses that can be leased to the device by the OpenVPN server.
7. Select your **Client Access** type. Select **Home Network Only** if you only want the remote device to access your home network; select **Internet and Home Network** if you also want the remote device to access internet through the VPN Server.
8. Click **SAVE**.
9. Click **GENERATE** to get a new certificate.

Certificate
Generate the certificate.

GENERATE

Note: If you have already generated one, please skip this step, or click **GENERATE** to update the certificate.

10. Click **EXPORT** to save the OpenVPN configuration file which will be used by the remote device to access your router.

Configuration File
Export the configuration file.

EXPORT

Step 2. Configure OpenVPN Connection on Your Remote Device

1. Visit <http://openvpn.net/index.php/download/community-downloads.html> to download the OpenVPN software, and install it on your device where you want to run the OpenVPN client utility.

Note: You need to install the **OpenVPN** client utility on each device that you plan to apply the VPN function to access your router. Mobile devices should download a third-party app from Google Play or Apple App Store.

2. After the installation, copy the file exported from your router to the OpenVPN client utility's "config" folder (for example, **C:\Program Files\OpenVPN\config** on Windows). The path depends on where the OpenVPN client utility is installed.
3. Run the OpenVPN client utility and connect it to OpenVPN Server.

15.2. Use PPTP VPN to Access Your Home Network

PPTP VPN Server is used to create a PPTP VPN connection for remote devices to access your home network.

To use the VPN feature, you need to set up PPTP VPN Server on your router, and configure the PPTP connection on remote devices. Please follow the steps below to set up a PPTP VPN connection.

Step 1. Set up PPTP VPN Server on Your Router

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > VPN Server > PPTP**, and tick the **Enable** box of **PPTP**.

Note: Before you enable **VPN Server**, we recommend you configure Dynamic DNS Service (recommended) or assign a static IP address for router's WAN port and synchronize your **System Time** with internet.

3. In the **Client IP Address** field, enter the range of IP addresses (up to 10) that can be leased to the devices by the PPTP VPN server.
4. Set the PPTP connection permission according to your needs.
 - Select **Allow Samba (Network Place) access** to allow your VPN device to access your local Samba server.
 - Select **Allow NetBIOS passthrough** to allow your VPN device to access your Samba server using NetBIOS name.
 - Select **Allow Unencrypted connections** to allow unencrypted connections to your VPN server.
5. Click **SAVE**.
6. Configure the PPTP VPN connection account for the remote device. You can create up to 16 accounts.

Account List

Configure accounts (up to 16) that can be used by remote clients to connect to the VPN server.

[+ Add](#)

Username	Password	Modify
There is no entry!		

- 1) Click [Add](#).
- 2) Enter the [Username](#) and [Password](#) to authenticate devices to the PPTP VPN Server.

Add Account X

Username:

Password: 

[CANCEL](#) [ADD](#)

- 3) Click [ADD](#).

Step 2. Configure PPTP VPN Connection on Your Remote Device

The remote device can use the Windows built-in PPTP software or a third-party PPTP software to connect to PPTP Server. Here we use the [Windows built-in PPTP software](#) as an example.

1. Go to [Start](#) > [Control Panel](#) > [Network and Internet](#) > [Network and Sharing Center](#).
2. Select [Set up a new connection or network](#).

3. Select **Connect to a workplace** and click **Next**.

4. Select **Use my Internet connection (VPN)**.

5. Enter the internet IP address of the router (for example: 218.18.1.73) in the **Internet address** field. Click **Next**.

6. Enter the **User name** and **Password** you have set for the PPTP VPN server on your router, and click **Connect**.

7. Click [Connect Now](#) when the VPN connection is ready to use.

15.3. Use L2TP/IPSec VPN to Access Your Home Network

L2TP/IPSec VPN Server is used to create a L2TP/IPSec VPN connection for remote devices to access your home network.

To use the VPN feature, you need to set up L2TP/IPSec VPN Server on your router, and configure the L2TP/IPSec connection on remote devices. Please follow the steps below to set up the L2TP/IPSec VPN connection.

*Image may differ from your actual product.

Step 1. Set up L2TP/IPSec VPN Server on Your Router

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > VPN Server > L2TP/IPSec**, and enable **L2TP/IPSec**.

Note:

- Firmware update may be required to support L2TP/IPSec VPN Server.
- Before you enable **VPN Server**, we recommend you configure Dynamic DNS Service (recommended) or assign a static IP address for router's WAN port and synchronize your **System Time** with internet.

L2TP/IPSec
 Set up a L2TP/IPSec VPN and accounts for quick, remote access to your network.

L2TP/IPSec:
☒ Enabled

Client IP Address:
 -

IPSec Encryption:

Encrypted

IPSec Pre-Shared Key:

☐ Allow NetBIOS passthrough

3. In the **Client IP Address** field, enter the range of IP addresses (up to 10) that can be leased to the devices by the L2TP/IPSec VPN server.
4. Keep **IPSec Encryption** as **Encrypted** and create an **IPSec Pre-Shared Key**.
5. Tick the **Allow NetBIOS passthrough** checkbox if you want to allow your VPN device to access your Samba server using NetBIOS name.
6. Click **SAVE**.
7. Configure the L2TP/IPSec VPN connection account for the remote device. You can create up to 16 accounts.

Account List

Configure accounts (up to 16) that can be used by remote clients to connect to the VPN server.

+ Add

Username	Password	Modify
There is no entry!		

- 1) Click [Add](#).
- 2) Enter the [Username](#) and [Password](#) to authenticate devices to the L2TP/IPSec VPN Server.

Add Account X

Username:

Password: 

CANCEL ADD

- 3) Click [ADD](#).

Step 2. Configure L2TP/IPSec VPN Connection on Your Remote Device

The remote device can use the Windows or Mac OS built-in L2TP/IPSec software or a third-party L2TP/IPSec software to connect to L2TP/IPSec Server. Here we use the [Windows built-in L2TP/IPSec software](#) as an example.

1. Go to [Start > Control Panel > Network and Internet > Network and Sharing Center](#).
2. Select [Set up a new connection or network](#).

3. Select **Connect to a workplace** and click **Next**.

4. Select **Use my Internet connection (VPN)**.

5. Enter the internet IP address of the router (for example: 218.18.1.73) in the **Internet address** field, and select the checkbox **Don't connect now; just set it up so I can connect later**. Click **Next**.

6. Enter the **User name** and **Password** you have set for the L2TP/IPSec VPN server on your router, and click **Connect**.

7. Click [Close](#) when the VPN connection is ready to use

8. Go to [Network and Sharing Center](#) and click [Change adapter settings](#).

9. Find the VPN connection you created, then double-click it.

10. Enter the **User name** and **Password** you have set for the L2TP/IPSec VPN server on your router, and click **Properties**.

11. Switch to the **Security** tab, select **Layer 2 Tunneling Protocol with IPsec (L2TP/IPSec)** and click **Advanced settings**.

12. Select **Use preshared key for authentication** and enter the IPsec Pre-Shared Key you have set for the L2TP/IPSec VPN server on your router. Then click **OK**.

Done! Click **Connect** to start VPN connection.

15.4. Use WireGuard VPN to Access Your Home Network

WireGuard VPN Server is used to create a Wire Guard VPN connection for remote devices to access your home network.

Step 1. Set up WireGuard VPN Server on Your Router

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > VPN Server > WireGuard**, and tick the **Enable** box of **WireGuard**.

WireGuard
Set up a WireGuard VPN and accounts for quick, remote and secure access to your network.

WireGuard:

☒ Enabled

Tunnel IP Address:

Public Key:

wu9CQG2Sh0qe+zByg/Plu7RKB+HhxzjVN
W3EWL7kUVE=

RENEW KEY

3. Set the [Tunnel IP Address](#) and [Listen Port](#). Do NOT change it unless necessary.
4. Select your [Client Access](#) type. Select [Home Network Only](#) if you only want the remote device to access your home network; select [Internet and Home Network](#) if you also want the remote device to access internet through the VPN Server.
5. (Optional) Click [Advanced Settings](#) to display more settings. If [DNS](#) is turned on, the router will become the DNS server of the VPN client that establishes a connection with it. Change the [Persistent Keepalive](#) time (25 seconds by default) to send out heartbeat regularly, you can also click [RENEW KEY](#) to update the private key and public key.

Step 2. Create accounts that can be used by remote clients to connect to the VPN server.

1. Locate the [Account List](#) section. Click [Add](#) to create an account.

The screenshot shows a modal dialog titled "Add" with a close button (X) in the top right corner. The dialog contains the following fields and controls:

- Username:** A text input field containing the value "Test".
- Address:** A text input field containing the value "10.5.5.2/32".
- Allowed IPs (Client):** A text input field containing the value "0.0.0.0/0".
- Allowed IPs (Server):** A text input field containing the value "10.5.5.2/32".
- Pre-shared Key (Secret):** A checkbox that is checked, followed by the text "Enabled".
- Buttons:** Two buttons at the bottom right: "CANCEL" and "SAVE".

2. Give a [Username](#) to this account.
3. View the [Address](#) of the virtual interface assigned to this account. Do NOT change it unless necessary.
4. Traffic sent from the WireGuard VPN client to the [Allowed IPs \(Client\)](#) will be transmitted through the tunnel. By default, all network traffic from clients will be transmitted through the tunnel. Do NOT change it unless necessary.
5. Traffic sent from the WireGuard VPN server to the [Allowed IPs \(Server\)](#) will be transmitted through the tunnel. Do NOT change it unless necessary.
6. Enable or disable [Pre-shared Key](#).
7. Click [SAVE](#).

Note: One account can only be used by one WireGuard VPN client at the same time to connect to the WireGuard VPN server.

8. Connect to the WireGuard server.

- For mobile phones, download WireGuard App from Google Play or Apple Store. Then, click  in the Modify column, use WireGuard App to scan the QR Code to connect to this server.

- For other devices (e.g. TP-Link WireGuard VPN client), click  in the Modify column and click [Export](#). Click [EXPORT](#) to save the WireGuard VPN configuration file which will be used by the remote device to access your router.

- On the account list, you can click the button to modify the VPN server settings, connect to the server, or delete the account.

Account List

Configure accounts (up to 16) that can be used by remote clients to connect to the VPN server.

+ Add

Username	Allowed IPs	Modify
Test	0.0.0.0/1,128.0.0.0/1	  
ADMIN	0.0.0.0/1,128.0.0.0/1	  

Note: If you have renewed the key, please reconfigure the client, otherwise the client will not be able to connect to the VPN server.

15.5. Use VPN Merge (Multi-VPN Clients) to Access Remote VPN Servers

VPN Merge allows your client devices to simultaneously access multiple VPN servers to satisfy your work, gaming, and video streaming needs.

To use the VPN feature, simply configure a VPN connection and choose your desired devices on your router, then these devices can access the remote VPN server. Please follow the steps below:

*Image may differ from your actual product.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > VPN Merge**.

Note: Firmware update may be required to support VPN Client.

3. Enable **VPN Merge**.

4. In Server List, add remote VPN servers. And enable the server(s) you need.

- 1) In the [Server List](#) section, click [Add](#).
- 2) Specify a [Description](#) for the VPN, and choose the [VPN Type](#).

3) Enter the VPN information provided by your VPN provider.

- [OpenVPN](#): Enter the VPN username and password if required by your VPN provider, otherwise simply leave them empty. Then import the configuration file provided by your VPN provider.

The 'Add Profile' dialog box is shown with the following fields and options:

- Description: test1
- VPN Type: OpenVPN (dropdown)
- Username: (Optional)
- Password: (Optional)
- Import .ovpn File:
 - UPLOAD button
 - OpenVPN-Config.ovpn (file icon)
- ☒ Import the CA file or edit the .ovpn file manually
- Import CA File:
 - UPLOAD button
- Manual Settings:
 - Edit button
- CANCEL and SAVE buttons at the bottom right.

Note: You can also check the box of [Import the CA file or edit the .ovpn file manually](#), then upload the CA file or manually configure the settings.

- **PPTP:** Enter the VPN server address (for example: 218.18.1.73) and the VPN username and password provided by your VPN provider.

The 'Add Profile' dialog box is shown with the following fields and options:

- Description: vpn2
- VPN Type: PPTP (dropdown)
- VPN Server: 218.18.1.73
- Username: usernametest
- Password: (masked with dots)
- Encryption: Auto (dropdown)
- CANCEL and SAVE buttons at the bottom right.

- **L2TP/IPSec VPN:** Enter the VPN server address (for example: 218.18.1.73), VPN username and password, and IPSec pre-shared key provided by your VPN provider.

The image shows a dialog box titled "Add Profile" with a close button (X) in the top right corner. It contains several input fields for configuring a VPN profile:

- Description: A text input field containing "vpn3".
- VPN Type: A dropdown menu showing "L2TP/IPSec".
- VPN Server: A text input field containing "218.18.1.73".
- Username: A text input field with a masked password (dots).
- Password: A text input field with a masked password (dots) and a toggle icon (eye) to the right.
- IPSec Pre-Shared Key: A text input field with a masked password (dots).

At the bottom right of the dialog, there are two buttons: "CANCEL" and "SAVE".

- **WireGuard VPN:** Give a description, and click **UPLOAD** to import the WireGuard VPN server configuration. Then you will see the detailed parameters. Do NOT change the parameters unless necessary.

Chapter 16

Customize Your Network Settings

This chapter guides you on how to configure advanced network features.

It contains the following sections:

- [Change the Internet Settings](#)
- [Change the LAN Settings](#)
- [Flow Controller](#)
- [Configure to Support IPTV Service](#)
- [Specify DHCP Server Settings](#)
- [Set Up a Dynamic DNS Service Account](#)
- [Create Static Routes](#)

16.1. Change the Internet Settings

After setting up your internet, you can also easily change the internet settings if needed in the future.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
 2. Go to [Advanced](#) > [Network](#) > [Internet](#).
- **To change the internet connection settings:**

Internet

Set up an internet connection with the service information provided by your ISP (internet service provider).

Internet Connection Type:	Dynamic IP
IP Address:	192.168.0.100
Subnet Mask:	255.255.255.0
Default Gateway:	192.168.0.1
Primary DNS:	192.168.0.1
Secondary DNS:	0.0.0.0

RENEW

RELEASE

▼ Advanced Settings

DNS Address:	Get Dynamically from ISP
Primary DNS:	192.168.0.1
Secondary DNS:	0.0.0.0
MTU Size:	1500 bytes
Host Name:	ArcherBE9300

☐ Get IP using Unicast DHCP

1. Select the internet connection type and configure the settings according to the information provided by your ISP.
2. (Optional) Reveal the advanced settings and change the settings if needed. It's recommended to keep the default settings.
3. Click [SAVE](#).

- **To change the MAC address of the router:**

You have three options:

- **Use Default MAC Address** - Do not change the default MAC address of your router in case the ISP does not bind the assigned IP address to the MAC address.
- **Clone Current Device MAC** - Select to copy the current MAC address of the computer that is connected to the router, in case the ISP binds the assigned IP address to the MAC address.
- **Use Custom MAC Address** - Select if your ISP requires you to register the MAC address and enter the correct MAC address in this field, in case the ISP binds the assigned IP address to the specific MAC address.

- **To Set up NAT**

The router's NAT (Network Address Translation) feature makes devices on the LAN use the same public IP address to communicate with devices on the internet, which protects the local network by hiding IP addresses of the devices.

If you want to enable NAT, tick the checkbox, and click [SAVE](#).

- **To enable or disable DoT/DoH**

Encrypting DNS queries by TLS/HTTPS, DoT/DoH can provide you with a more secure and private internet connection.

1. If you want to enable DoT or DoH, select the corresponding checkbox in DNS Privacy. If you want to disable DoT/DoH, select None.
2. Select a DNS Mode according to your need.
 - **Default Mode** - The router will prioritize the secure DNS server you selected. If the server is unavailable, the default DNS server will take effect.
 - **Ultra Secure Mode** - In this mode, the router only uses the secure DNS server you selected. If the server is unavailable, the internet connectivity will be affected.

3. Enter or click to select DNS Server(s).

DoT/DoH

Encrypting DNS queries by TLS/HTTPS, DoT/DoH can provide you with a more secure and private internet connection.

DNS Privacy: ☒ DoT
☐ DoH
☐ None

DNS Mode: ☒ Default Mode
The router will prioritize the secure DNS server you selected. If the server is unavailable, the default DNS server will take effect.
☐ Ultra Secure Mode

DNS Server: ✓
 (Optional)
 (Optional)

[DETECT DNS SERVER](#)

4. You can click [DETECT DNS SERVER](#) to detect whether the selected DNS servers are available or not.

5. Click [SAVE](#). Then DoH/DoT will be applied to these DNS servers, and the Primary & Secondary DNS servers you've set won't take effect.

- **To change the Internet Port Negotiation Speed Setting**

Internet Port Negotiation Speed Setting

Internet Port Negotiation Speed Setting:

You can change the internet port speed mode. [Auto Negotiation](#) is recommended.

- **To enable Flow Controller**

With [Flow Controller](#) enabled, when a device gets overloaded it will send a PAUSE frame to notify the peer device to stop sending data for a specified period of time, thus avoiding the packet loss caused by congestion. [Flow Controller](#) is enabled by default.

Flow Controller

With this option enabled, when a device gets overloaded it will send a PAUSE frame to notify the peer device to stop sending data for a specified period of time, thus avoiding the packet loss caused by congestion.

Flow Control: ☒ RX Enabled
☒ TX Enabled

16.2. Change the LAN Settings

The router is preset with a default LAN IP 192.168.0.1, which you can use to log in to its web management page. The LAN IP address together with the Subnet Mask also defines the subnet that the connected devices are on. If the IP address conflicts with another device on your local network or your network requires a specific IP subnet, you can change it.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [LAN](#).
3. Type in a new IP Address appropriate to your needs. And leave the [Subnet Mask](#) as the default settings.

LAN	
View and configure LAN settings.	
MAC Address:	00-FF-00-17-71-A3
IP Address:	192.168.1.1
Subnet Mask:	255.255.255.0

4. Click [SAVE](#).

Note: If you have set the Port Forwarding, DMZ or DHCP address reservation, and the new LAN IP address is not in the same subnet with the old one, then you should reconfigure these features.

16.3. Flow Controller

With [Flow Controller](#) enabled, when a device gets overloaded it will send a PAUSE frame to notify the peer device to stop sending data for a specified period of time, thus avoiding the packet loss caused by congestion.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [LAN](#), and locate the [Flow Controller](#) section.
3. [Flow Controller](#) is enabled by default. Please note that enable [Flow Controller](#) may cause internet drop with some devices.

Flow Controller	
With this option enabled, when a device gets overloaded it will send a PAUSE frame to notify the peer device to stop sending data for a specified period of time, thus avoiding the packet loss caused by congestion.	
Flow Control:	☒ RX Enabled
	☒ TX Enabled

16.4. Configure to Support IPTV Service

I want to:

Configure IPTV setup to enable Internet/IPTV/Phone service provided by my internet service provider (ISP).

How can I do that?

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [IPTV/VLAN](#).
- If your ISP provides the networking service based on IGMP technology, e.g., British Telecom(BT) and Talk Talk in UK:
 - 1) Tick the [IGMP Proxy](#) and [IGMP Snooping](#) checkbox, then select the [IGMP Version](#), either V2 or V3, as required by your ISP.

IGMP

Check the multicast settings. It is recommended to keep them as default.

IGMP Proxy:	☒ Enabled
IGMP Snooping:	☒ Enabled
IGMP Version:	V2

- 2) Click [SAVE](#).
 - 3) After configuring IGMP proxy, IPTV can work behind your router now. You can connect your set-top box to any of the router's Ethernet port.
- If IGMP is not the technology your ISP applies to provide IPTV service:
 - 1) Tick [Enable IPTV/VLAN](#).
 - 2) Select the appropriate [Mode](#) according to your ISP.
 - Select [Bridge](#) if your ISP is not listed and no other parameters are required.
 - Select [Custom](#) if your ISP is not listed but provides necessary parameters.

- 3) After you have selected a mode, the necessary parameters, including the LAN port for IPTV connection, are predetermined. If not, select the LAN type to determine which port is used to support IPTV service.
- 4) Click [SAVE](#).
- 5) Connect the set-top box to the corresponding LAN port which is predetermined or you have specified in Step 3.

Done!

Your IPTV setup is done now! You may need to configure your set-top box before enjoying your TV.

16.5. Specify DHCP Server Settings

By default, the DHCP (Dynamic Host Configuration Protocol) Server is enabled and the router acts as a DHCP server; it dynamically assigns TCP/IP parameters to client devices from the IP Address Pool. You can change the settings of the DHCP Server if necessary, and you can reserve LAN IP addresses for specified client devices.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [DHCP Server](#).

- **To specify the IP address that the router assigns:**

DHCP Server

Dynamically assign IP addresses to the devices connected to the router.

DHCP Server: ☒ Enabled

IP Address Pool: -

Address Lease Time: minutes

Default Gateway: (Optional)

Primary DNS: (Optional)

Secondary DNS: (Optional)

[DETECT DHCP SERVER](#) [?](#)

☒ No redundant DHCP server found in the current network.

1. Tick the [Enable](#) checkbox.
2. Enter the starting and ending IP addresses in the [IP Address Pool](#).
3. Enter other parameters if the ISP offers. The [Default Gateway](#) is automatically filled in and is the same as the LAN IP address of the router.
4. You can click [DETECT DHCP SERVER](#) to check if there are multiple DHCP servers in your network. It is recommended to enable only one server.
5. Click [SAVE](#).

- **To reserve an IP address for a specified client device:**

1. Click [Add](#) in the [Address Reservation](#) section.

Add a Reservation Entry

×

MAC Address:

[VIEW CONNECTED DEVICES](#)

IP Address:

[CANCEL](#) [SAVE](#)

2. Click [VIEW CONNECTED DEVICES](#) and select the you device you want to reserve an IP for. Then the [MAC Address](#) will be automatically filled in. Or enter the [MAC address](#) of the client device manually.
3. Enter the [IP address](#) to reserve for the client device.
4. Click [SAVE](#).

Address Reservation				
Reserve IP addresses for specific devices connected to the router.				
+ Add				
Device Name	MAC Address	Reserved IP Address	Status	Modify
18101958-BG	B0-19-21-AA-B2-58	192.168.1.74	☒	✎ 🗑

- **To view devices assigned with IP addresses by the DHCP server:**

You can view the devices that are currently assigned with IP addresses by the DHCP server in [DHCP Client List](#).

DHCP Client List			
View the devices that are currently assigned with IP addresses by the DHCP server.			
Total Clients: 1			
Refresh			
Device Name	MAC Address	Assigned IP Address	Lease Time
18101958-BG	B0-19-21-AA-B2-58	192.168.1.74	1:57:22

16.6. Set Up a Dynamic DNS Service Account

Most ISPs assign a dynamic IP address to the router and you can use this IP address to access your router remotely. However, the IP address can change from time to time and you don't know when it changes. In this case, you might apply the DDNS (Dynamic Domain Name Server) feature on the router to allow you and your friends to access your router and local servers (FTP, HTTP, etc.) using a domain name without checking and remembering the IP address.

Note: DDNS does not work if the ISP assigns a private WAN IP address (such as 192.168.1.x) to the router.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [Network](#) > [Dynamic DNS](#).
3. Select the DDNS [Service Provider](#): TP-Link, NO-IP or DynDNS. It is recommended to select TP-Link so that you can enjoy TP-Link's superior DDNS service. Otherwise, please select NO-IP or DynDNS. If you don't have a DDNS account, you have to register first by clicking [Register Now](#).

Dynamic DNS

Assign a fixed host name (domain name) for remote access to your device, website, or server behind the router.

Service Provider:

TP-Link

Note: To enjoy TP-Link's DDNS service, you have to log in with a TP-Link ID. If you have not logged in with one, click [log in](#).

4. Click **Register** in the **Domain Name List** if you have selected TP-Link, and enter the **Domain Name** as needed.

Dynamic DNS

Assign a fixed host name (domain name) for remote access to your device, website, or server behind the router.

Service Provider:

[LOGIN AND SAVE](#)

[LOGOUT](#)

5. Click **LOGIN AND SAVE**.

💡 **Tips:** If you want to use a new DDNS account, please click [Logout](#) first, and then log in with a new account.

16.7. Create Static Routes

Static routing is a form of routing that is configured manually by a network administrator or a user by adding entries into a routing table. The manually-configured routing information guides the router in forwarding data packets to the specific destination.

I want to:

Visit multiple networks and servers at the same time.

For example, in a small office, my PC can surf the internet through Router A, but I also want to visit my company's network. Now I have a switch and Router B. I connect the devices as shown in the following figure so that the physical connection between my PC and my company's server is established. To surf the internet and visit my company's network at the same time, I need to configure the static routing.

*Image may differ from your actual product.

How can I do that?

1. Change the routers' LAN IP addresses to two different IP addresses on the same subnet. Disable Router B's DHCP function.
2. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for Router A.
3. Go to [Advanced](#) > [Network](#) > [Routing](#).
4. Click [Add](#) and finish the settings according to the following explanations:

Add a Routing Entry X

Network Destination: 172.30.30.1

Subnet Mask: 255.255.255.255

Default Gateway: 192.168.0.2

Interface: LAN/WLAN ▼

Description: Company

CANCEL SAVE

Network Destination: The destination IP address that you want to assign to a static route. This IP address cannot be on the same subnet with the WAN IP or LAN IP of Router A. In the example, the IP address of the company network is the destination IP address, so here enter 172.30.30.1.

Subnet Mask: Determines the destination network with the destination IP address. If the destination is a single IP address, enter 255.255.255.255; otherwise, enter the subnet mask of the corresponding network IP. In the example, the destination network is a single IP, so here enter 255.255.255.255.

Default Gateway: The IP address of the gateway device to which the data packets will be sent. This IP address must be on the same subnet with the router's IP which sends out data. In the example, the data packets will be sent to the LAN port of Router B and then to the Server, so the default gateway should be 192.168.0.2.

Interface: Determined by the port (WAN/LAN) that sends out data packets. In the example, the data are sent to the gateway through the LAN port of Router A, so **LAN/WLAN** should be selected.

Description: Enter a description for this static routing entry.

5. Click **SAVE**.
6. Check the **Routing Table** below. If you can find the entry you've set, the static routing is set successfully.

Routing Table
View all valid routing entries that are currently in use.

Active Route Number: 3  Refresh

Network Destination	Subnet Mask	Gateway	Interface
172.30.30.1	255.255.255.255	192.168.0.2	LAN
192.168.0.0	255.255.255.0	0.0.0.0	LAN
0.0.0.0	0.0.0.0	0.0.0.0	WAN

Done!

Open a web browser on your PC. Enter the company server's IP address to visit the company network.

Chapter 17

Manage the Router

This chapter will show you the configuration for managing and maintaining your router.

It contains the following sections:

- [Update the Firmware](#)
- [Backup and Restore Configuration Settings](#)
- [Password Recovery](#)
- [Security Questions](#)
- [Change the Login Password](#)
- [Local Management](#)
- [Remote Management](#)
- [System Log](#)
- [Test the Network Connectivity](#)
- [Set System Time](#)
- [Set System Language](#)
- [Set the Router to Reboot Regularly](#)
- [Control the LED](#)
- [Set ECO Mode to Save Power](#)
- [Other System Settings](#)

17.1. Update the Firmware

TP-Link aims at providing better network experience for users.

We will inform you through the web management page if there's any new firmware available for your router. Also, the latest firmware will be released at the TP-Link official website www.tp-link.com, and you can download it from the [Support](#) page for free.

Note:

- Back up your router's configurations before firmware update.
- Do NOT turn off the router during the firmware update.

17.1.1. Auto Update

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System](#) > [Firmware Update](#).
3. Enable [Auto Update](#).

The screenshot shows the 'Auto Update' settings page. At the top, there is a title 'Auto Update' and a description: 'Auto update allows your router to automatically update to the latest firmware which provides better network performance and enhances system security.' Below this, there are three settings: 'Auto Update:' with a toggle switch that is turned on; 'Current Time:' showing '2024-11-01 06:08:21 AM' with a 'Time Settings' link; and 'Update Time:' with a dropdown menu set to '03:00 AM-05:00 AM'.

4. Specify the [Update Time](#) and save the settings.

The router will update firmware automatically at the specified time when new version is available.

17.1.2. Online Update

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. When the latest firmware is available for your router, the update icon  will display in the top-right corner of the page. Click the icon to go to the [Firmware Update](#) page.
Alternatively, you can go to [Advanced](#) > [System](#) > [Firmware Update](#), and click [CHECK FOR UPDATES](#) to see whether the latest firmware is released.

The screenshot shows the 'Online Update' section. At the top, it says 'Online Update' and 'Update firmware over the internet.' Below this, there are two lines of text: 'Firmware Version: 1.0.1 Build 20210714 ver 1007100000' and 'Hardware Version: Archer'. At the bottom, there is a blue button labeled 'CHECK FOR UPDATES'.

3. Focus on the **Online Update** section, and click **UPDATE** if there is new firmware.

This screenshot is similar to the previous one, but it shows the 'UPDATE' button instead of 'CHECK FOR UPDATES'. It also includes a 'Latest Firmware Version: 1.0.1 Build 20210714 ver 1007100000' and a link labeled 'What's New'.

4. Wait a few minutes for the update and reboot to complete.

Tips: If there's a new and important firmware update for your router, you will see the prompt notification on your computer as long as a web browser is opened. Click to update, and log in to the web management page with the username and password you set for the router. You will see the **Firmware Update** page.

17.1.3. Local Update

1. Download the latest firmware file for the router from www.tp-link.com.
2. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
3. Go to **Advanced > System > Firmware Update**.
4. Focus on the **Local Update** section. Click **UPLOAD** to locate the downloaded new firmware file, and click **UPDATE**.

The screenshot shows the 'Local Update' section. At the top, it says 'Local Update' and 'Update firmware for this router from a local file.' Below this, there is a label 'New Firmware File:' followed by two blue buttons: 'UPLOAD' (with an upload icon) and 'UPDATE'.

5. Wait a few minutes for the update and reboot to complete.

Note: If you fail to update the firmware for the router, please contact our [Technical Support](#).

17.1.4. EasyMesh Satellite Update

EasyMesh Satellite Update allows you to remotely check and update the firmware of the satellite devices connected to this router via EasyMesh.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced** > **System** > **Firmware Update**, and locate the **EasyMesh Satellite Update** section.
3. The router's satellite devices will appear on the table. Click **CHECK FOR UPDATES** to see whether the latest firmware is released. If you want to update a satellite device, click  on the right of the corresponding device.

 **Note:** The update will take a few minutes and the satellite router will reboot.

17.2. Backup and Restore Configuration Settings

The configuration settings are stored as a configuration file in the router. You can backup the configuration file to your computer for future use and restore the router to a previous settings from the backup file when needed. Moreover, if necessary you can erase the current settings and reset the router to the default factory settings.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced** > **System** > **Backup & Restore**.

- **To backup configuration settings:**

Click **BACK UP** to save a copy of the current settings to your local computer. A '.bin' file of the current settings will be stored to your computer.

Backup

Save current router settings to a file.

BACK UP

- **To restore configuration settings:**

1. Click [UPLOAD](#) to locate the backup configuration file stored on your computer, and click [RESTORE](#).

Restore

Restore settings from a backup file.

File:

UPLOAD

RESTORE

2. Wait a few minutes for the restoring and rebooting.

Note: During the restoring process, do not turn off or reset the router.

- **To reset the router except your login password and TP-Link ID:**

1. In the [Factory Default Restore](#) section, click [RESTORE](#).

Factory Default Restore

Restore all settings to default values.

Restore all configuration settings to default values, except your login and cloud account information.

RESTORE

2. Wait a few minutes for the resetting and rebooting.

Note:

- During the resetting process, do not turn off the router.
- After reset, you can still use the current login password or the TP-Link ID to log in to the web management page.

- **To reset the router to factory default settings:**

1. Click [FACTORY RESTORE](#) to reset the router.

Restore all the configuration settings to their default values.

FACTORY RESTORE

2. Wait a few minutes for the resetting and rebooting.

Note:

- During the resetting process, do not turn off or reset the router.
- We strongly recommend you backup the current configuration settings before resetting the router.

17.3. Password Recovery

This feature allows you to recover the login password you set for your router in case you forget it.

Note: If you are using a TP-Link ID to log in to the web management page, the Password Recovery feature will be disabled. To manage the TP-Link ID, go to [Advanced](#) > [TP-Link ID](#).

1. Visit <http://tplinkwifi.net>, and log in with the password you set for the router.
2. Go to [Advanced](#) > [System](#) > [Administration](#) and focus on the [Admin Password Recovery](#) section.
3. Tick the [Enable](#) box of [Password Recovery](#).
4. Specify a [mailbox \(From\)](#) for sending the recovery letter and enter its [SMTP Server](#) address. Specify a [mailbox \(To\)](#) for receiving the recovery letter. If the mailbox (From) to send the recovery letter requires encryption, Tick the [Enable](#) box of [Authentication](#) and enter its username and password.

Tips:

- SMTP server is available for users in most webmail systems. For example, the SMTP server address of Gmail is smtp.gmail.com.
- Generally, Authentication should be enabled if the login of the mailbox requires username and password.

Admin Password Recovery
If you forget your admin password, you can reset it via the below methods.

17.5. Change the Login Password

The account management feature allows you to change your login password of the web management page.

Note: If you are using a TP-Link ID to log in to the web management page, the account management feature will be disabled. To manage the TP-Link ID, go to [Advanced > TP-Link ID](#).

1. Visit <http://tplinkwifi.net>, and log in with the password you set for the router.
2. Go to [Advanced > System > Administration](#) and focus on the [Change Password](#) section.

- **Local Password Verification:**

1. Select [Local Password](#) as Verification Type.
2. Enter the old password, then a new password twice (both case-sensitive). Click [SAVE](#).
3. Use the new password for future logins.

Change Password
Change the router's local management password.

Verification Type: Local Password

Old Password:

New Password:

Confirm New Password:

- **Security Questions Verification:**

1. Select [Security Questions](#) as Verification Type.
2. Enter the answers of the security questions.
3. Enter a new password twice (case-sensitive). Click [SAVE](#).
4. Use the new password for future logins.

Change Password

Change the router's local management password.

Verification Type: Security Questions

Security Question 1: In what city did you meet your spouse/significant other?

Answer 1:

Security Question 2: What was your childhood nickname?

Answer 2:

New Password:

Confirm New Password:

17.6. Local Management

This feature allows you to limit the number of client devices on your LAN from accessing the router by using the MAC address-based authentication.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > System > Administration** and complete the settings in **Local Management** section as needed.

- **Access the router via HTTPS and HTTP:**

Tick the **Enable** box of **Local Management via HTTPS** to access the router via HTTPS and HTTP, or keep it disabled to access the router only via HTTP.

Local Management

Access and manage the router from local network devices.

Local Management via HTTPS: ☒ Enabled

- **Allow all LAN connected devices to manage the router:**

Select **All Devices** for **Local Managers**.

Local Management

Access and manage the router from local network devices.

Local Management via HTTPS: ☒ Enabled

Local Managers: All Devices

- **Allow specific devices to manage the router:**

1. Select **All Devices** for **Local Managers** and click **SAVE**.

Local Management
Access and manage the router from local network devices.

Local Management via HTTPS: ☒ Enabled

Local Managers: Specified Devices

[+ Add Device](#)

Description	MAC Address	Modify
There is no entry!		

2. Click **Add Device**.

Add Device [X]

Description: (Optional)

[VIEW CONNECTED DEVICES](#)

MAC Address:

[CANCEL](#) [SAVE](#)

3. Click **VIEW CONNECTED DEVICES** and select the device to manage the router from the Connected Devices list, or enter the MAC address of the device manually.
4. Specify a **Description** for this entry.
5. Click **SAVE**.

17.7. Remote Management

This feature allows you to control remote devices' authority to manage the router.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced** > **System** > **Administration** and complete the settings in **Remote Management** section as needed.

- **Forbid all devices to manage the router remotely:**

Do not tick the **Enable** checkbox of **Remote Management**.

- **Allow all devices to manage the router remotely:**

Remote Management
Access and manage the router over the internet.

Note: Remote Management is not supported when you are connected to the internet only via IPv6. If you want to use Remote Management, please make sure you have set up an IPv4 connection first.

Remote Management: ☒ Enabled

HTTPS Port:

Web Address for Management:

Remote Managers:

1. Tick the **Enable** checkbox of **Remote Management**.
2. Keep the HTTPS port as default settings (recommended) or enter a value between 1024 and 65535.
3. Select **All Devices** for **Specified Devices**.
4. Click **SAVE**.

Devices on the internet can log in to <https://Router's WAN IP address:port number> (such as <https://113.116.60.229:1024>) to manage the router.

 Tips:

- You can find the WAN IP address of the router on [Network Map > Internet](#).
 - The router's WAN IP is usually a dynamic IP. Please refer to [Set Up a Dynamic DNS Service Account](#) if you want to log in to the router through a domain name.
- **Allow a specific device to manage the router remotely:**

Remote Management
Access and manage the router over the internet.

Note: Remote Management is not supported when you are connected to the internet only via IPv6. If you want to use Remote Management, please make sure you have set up an IPv4 connection first.

Remote Management: ☒ Enabled

HTTPS Port:

Web Address for Management:

Remote Managers:

Only this IP Address:

1. Tick the **Enable** checkbox of **Remote Management**.
2. Keep the HTTPS and HTTP port as default settings (recommended) or enter a value between 1024 and 65535.
3. Select **Specified Device** for **Remote Managers**.
4. In the **Only this IP Address** field, enter the IP address of the remote device to manage the router.

5. Click **SAVE**.

Devices using this WAN IP can manage the router by logging in to <http://Router's WAN IP:port number> (such as <http://113.116.60.229:1024>).

 **Tips:** The router's WAN IP is usually a dynamic IP. Please refer to [Set Up a Dynamic DNS Service Account](#) if you want to log in to the router through a domain name.

17.8. System Log

When the router does not work normally, you can save the system log and send it to the technical support for troubleshooting.

- **To save the system log locally:**

1. Visit <http://tplinkwifi.net>, and log in your TP-Link ID or the password you set for the router.
2. Go to **Advanced > System > System Log**.
3. Choose the type and level of the system logs as needed.

System Log

View a detailed record of system activities.

4. In the **Save Log** section, click **SAVE TO LOCAL** to save the system logs to a local disk.

Save Log

Send system log to a specific email address or save locally.

MAIL LOG
SAVE TO LOCAL

- **To send the system log to a mailbox at a fixed time:**

For example, I want to check my router's working status at a fixed time every day, however, it's too troublesome to log in to the web management page every time I want to go checking. It would be great if the system logs could be sent to my mailbox at 8 a.m. every day.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System](#) > [System Log](#).
3. In the [Save Log](#) section, click [MAIL LOG](#).
4. Enter the information required:

A screenshot of the 'Mail Log' configuration window. The window has a title bar with 'Mail Log' and a close button. Below the title bar is a note: 'Note: Set your mail information below.' The form contains several fields: 'Email From:' with a text input; a checked checkbox 'Require Password'; 'Username:' with a text input; 'Email Password:' with a text input and an eye icon; 'SMTP Server:' with a text input; 'Email To:' with a text input; a checked checkbox 'Mail Log Automatically'; 'Frequency:' with a dropdown menu showing 'Every Day'; and 'Mail Time:' with two dropdown menus showing '00'. At the bottom right are 'CANCEL' and 'SAVE' buttons.

Mail Log [X]

Note: Set your mail information below.

Email From:

☒ Require Password

Username:

Email Password: 

SMTP Server:

Email To:

☒ Mail Log Automatically

Frequency:

Mail Time: :

- 1) **Email From:** Enter the email address used for sending the system log.
- 2) Select **Require Password**.
-  **Tips:** Generally, Require Password should be selected if the login of the mailbox requires username and password.
- 3) **Username:** Enter the email address used for sending the system log.
- 4) **Email Password:** Enter the password to login the sender's email address.
- 5) **SMTP Server:** Enter the SMTP server address.
-  **Tips:** SMTP server is available for users in most webmail systems. For example, the SMTP server address of Hotmail is smtp-mail.outlook.com.
- 6) **Email To:** Enter the recipient's email address, which can be the same as or different from the sender's email address.
- 7) Select **Mail Log Automatically**.

🔗 **Tips:** The router will send the system log to the designated email address if this option is enabled.

8) **Frequency:** This determines how often the recipient will receive the system log .

5. Click **SAVE**.

17.9. Test the Network Connectivity

Diagnostics is used to test the connectivity between the router and the host or other network devices.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > System > Diagnostics**.

Diagnostics
Troubleshoot network connectivity problems.

Diagnostics Tools: Ping

IP Address/Domain Name:

Ping Count:

Ping Packet Size: Bytes

START

3. Enter the information:

- 1) Choose **Ping** or **Traceroute** as the diagnostic tool to test the connectivity;
 - **Ping** is used to test the connectivity between the router and the tested host, and measure the round-trip time.
 - **Traceroute** is used to display the route (path) your router has passed to reach the tested host, and measure transit delays of packets across an Internet Protocol network.
- 2) Enter the **IP Address** or **Domain Name** of the tested host.
- 3) Modify the **Ping Count** number and the **Ping Packet Size**. It's recommended to keep the default value.
- 4) If you have chosen **Traceroute**, you can modify the **Traceroute Max TTL**. It's recommended to keep the default value.

4. Click **START** to begin the diagnostics.

The figure below indicates the proper connection between the router and the Yahoo server (www.Yahoo.com) tested through **Ping**.

```
PING 192.168.0.1 (192.168.0.1): 64 data bytes
Reply from 192.168.0.1: bytes=64 ttl=64 seq=1 time=0.322 ms
Reply from 192.168.0.1: bytes=64 ttl=64 seq=2 time=0.308 ms
Reply from 192.168.0.1: bytes=64 ttl=64 seq=3 time=0.286 ms
Reply from 192.168.0.1: bytes=64 ttl=64 seq=4 time=0.334 ms
--- Ping Statistic "192.168.0.1" ---
Packets: Sent=4, Received=4, Lost=0 (0.00% loss)
Round-trip min/avg/max = 0.286/0.312/0.334 ms
ping is stopped.
```

The figure below indicates the proper connection between the router and the Yahoo server (www.Yahoo.com) tested through [Traceroute](#).

```
traceroute to 192.168.0.1, 5 hops max, 38 byte packets
1 Archer (192.168.0.1) 0.045 ms 0.015 ms 0.008 ms
Trace Complete.
traceroute is stopped.
```

17. 10. Set System Time

System time is the time displayed while the router is running. The system time you configure here will be used for other time-based functions like Parental Controls. You can choose the way to obtain the system time as needed.

- **To get time from the internet:**

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System](#) > [Time](#).
3. Enable [24-Hour Time](#) if you want the time to display in a 24-hour way.
4. In the [Set Time](#) field, select [Get from Internet](#).

System Time
Set the router's system time.

Current Time:

2024-11-01 08:08:11 AM

24-Hour Time:

☐

Set Time:

Get from Internet

Time Zone:

(UTC-08:00) Pacific Time (US & Canada)

NTP Server I:

us.pool.ntp.org

NTP Server II:

north-america.pool.ntp.org

(Optional)

5. Select your local **Time Zone** from the drop-down list.
6. In the **NTP Server I** field, enter the IP address or domain name of your desired NTP Server.
7. (Optional) In the **NTP Server II** field, enter the IP address or domain name of the second NTP Server.
8. Click **SAVE**.

- **To get time from your computer:**

1. In the **Set Time** field, select **Get from Managing Device**.

System Time
Set the router's system time.

Current Time:

2024-11-01 08:10:22 AM

24-Hour Time:

☐

Set Time:

Get from Managing Device

Time Zone:

(UTC-08:00) Pacific Time (US & Canada)

2. The time of your computer will then be displayed and click **SAVE**.

- **To manually set the date and time:**

1. In the **Set Time** field, select **Manually**.

System Time
Set the router's system time.

Current Time:

End: 2024

Nov

First

Sun

02:00

Running Status:

Daylight Saving Time is off.

2. Select the correct [Start](#) date and time when daylight saving time starts at your local time zone.
3. Select the correct [End](#) date and time when daylight saving time ends at your local time zone.
4. Click [SAVE](#).

17. 11. Set System Language

System language is the language displayed when you log into the router. You can change the system language as needed.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Click  English in the top-right corner of the page.
3. Select the language from the dropdown list, then click [SAVE](#).

17. 12. Set the Router to Reboot Regularly

The Scheduled Reboot feature cleans the cache to enhance the running performance of the router.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System](#) > [Reboot](#).
3. Tick the [Enable](#) box of [Reboot Schedule](#).

The screenshot shows the 'Reboot Schedule' configuration page. It has a title 'Reboot Schedule' and a subtitle 'Set when and how often the router reboots automatically.' Below this, there's a 'Reboot Schedule:' label followed by a checked checkbox and the word 'Enabled'. A note states: 'Note: Before using this feature, make sure System Time is set to "Get from Internet".' There are three input fields: 'Reboot Time' set to '3 : 00', 'Repeat' set to 'Every Week', and a day selector set to 'Monday'.

4. Specify the [Reboot Time](#) when the router reboots and [Repeat](#) to decide how often it reboots.
5. Click [SAVE](#).

17. 13. Control the LED

The LED of the router indicates its activities and status. You can enable the Night Mode feature to specify a time period during which the LED is off.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.

2. Go to [Advanced](#) > [System](#) > [LED Control](#).
3. Enable [Night Mode](#).
4. Specify the LED off time, and the LED will be off during this period every day.
5. Click [SAVE](#).

The screenshot shows the 'LED Control' section with a toggle switch for 'LED Status' turned on. Below it is the 'Night Mode' section, which is also enabled. A note states: 'Before using this feature, make sure System Time is set to "Get from Internet"'. The current time is displayed as '2024-11-01 08:23:06'. The 'LED Off From' time is set to 23:00, and the 'To' time is set to 7:00 (next day).

17. 14. Set ECO Mode to Save Power

ECO Mode helps to decrease electricity usage by lowering the power output of the router. Smart ECO mode automatically adjusts power consumption based on your traffic usage, minimizing the impact on your regular Internet traffic. It will also turn off the LEDs. You can also manually select the ECO mode to reduce router's energy consumption by lowering power, controlling Wi-Fi and LED usage time.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System](#) > [ECO Mode](#).
3. Toggle on to enable [ECO Mode](#).

The screenshot shows the 'ECO Mode' section with a toggle switch for 'ECO Mode' turned on. Below the toggle is a link that says 'What's ECO Mode?'.

- **Automatically adjust power consumption:**

1. Locate the [ECO Mode Settings](#) section. Enable [Smart ECO](#).

ECO Mode Settings

Smart ECO: ☒ Enabled ?

Note: You can also disable Smart ECO mode and customize your power-saving mode settings.

ECO Mode is intelligently activated. The intensity level of ECO mode will be automatically adjusted based on your traffic usage, ensuring maximum power savings while maintaining usability.

- **Customize your power-saving mode settings manually:**

1. Locate the [ECO Mode Settings](#) section. Disable [Smart ECO](#).

ECO Mode Settings

Smart ECO: ☐ Enabled ?

Power-saving mode:

- ☐ Balance Mode
- ☐ Efficient Mode
- ☒ Standby Mode

Maximizes power saving by shutting off unused ports and limiting Wi-Fi to the 2.4 GHz band only. LED lights will also be turned off. Expect significant speed reduction—suitable for minimal internet use.

Note: Before using this feature, make sure [System Time](#) is set to "Get from Internet".

Current Time: 2024-11-08 09:35:06 AM

Effective Time:

- ☐ Always On
- ☒ Only On During a Time Period

Repeat Schedule: [SET REPEAT SCHEDULE](#)

2. Select a [Power-saving mode](#) according to your need.

- [Balance Mode](#) - Moderately adjusts Wi-Fi signal strength for stable connectivity. Ideal for daily use with minimal impact on performance.
- [Efficient Mode](#) - Saves more energy with a noticeable speed reduction. The 6 GHz band will be disabled. Suitable for basic browsing with some impact on high-demand tasks like HD streaming or gaming.
- [Standby Mode](#) - Maximizes power saving by shutting off unused ports and limiting Wi-Fi to the 2.4 GHz band only. LED lights will also be turned off. Expect significant speed reduction—suitable for minimal internet use.

3. Select the [Effective Time](#) of ECO mode.

4. If you select [Only On During a Time Period](#), click [SET REPEAT SCHEDULE](#), click or drag the grids in the table to select timeslots. Then click [SAVE](#).

Set the Schedule

Client Identification: ☒

- **Join User Experience Improvement Program:**

Joining User Experience Improvement Program means you agree to send anonymous usage data to help TP-Link improve their products. Without interrupting you, the program automatically collects information about how you use the product and its features anonymously without any information that can be used to identify you.

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to [Advanced](#) > [System](#) > [About](#).
3. Toggle on to [Join User Experience Improvement Program](#).

FAQ

Q1. What should I do if I forget my wireless password?

The default wireless password is printed on the label of the router. If the password has been altered:

1. Connect your computer to the router using an Ethernet cable.
2. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
3. Go to [Wireless](#) to retrieve or reset your wireless password.

Q2. What should I do if I forget my web management password?

- If you are using a TP-Link ID to log in, or you have enabled the Password Recovery feature of the router, click [Forgot password](#) on the login page and then follow the instructions to reset it.
- Alternatively, press and hold the [Reset](#) button of the router until the Power LED blinks to restore factory default settings, and then visit <http://tplinkwifi.net> to create a new login password.

Note:

- Please refer to [Password Recovery](#) to learn how to configure Password Recovery.
- You'll need to reconfigure the router to surf the internet once the router is reset, and please mark down your new password for future use.

Q3. What should I do if I can't log in to the router's web management page?

This can happen for a variety of reasons. Please try the methods below to log in again.

- Make sure your computer is connected to the router correctly and the corresponding LED indicator(s) light up.
- Make sure the IP address of your computer is configured as [Obtain an IP address automatically](#) and [Obtain DNS server address automatically](#).
- Make sure <http://tplinkwifi.net> or <http://192.168.0.1> is correctly entered.
- Check your computer's settings:
 - 1) Go to [Start](#) > [Control Panel](#) > [Network and Internet](#), and click [View network status and tasks](#).
 - 2) Click [Internet Options](#) on the bottom left.
 - 3) Click [Connections](#) and select [Never dial a connection](#).

4) Click [LAN settings](#) and deselect the following three options and click [OK](#).

5) Go to [Advanced](#) > [Restore advanced settings](#), click [OK](#) to save the settings.

- Use another web browser or computer to log in again.
- Reset the router to factory default settings and try again. If login still fails, please contact the technical support.

Note: You'll need to reconfigure the router to surf the internet once the router is reset.

Q4.What should I do if I can't access the internet even though the configuration is finished?

1. Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
2. Go to **Advanced > Network > Status** to check internet status:

If IP Address is a valid one, please try the methods below and try again:

- Your computer might not recognize any DNS server addresses. Please manually configure the DNS server.
 - 1) Go to **Advanced > Network > DHCP Server**.
 - 2) Enter 8.8.8.8 as Primary DNS, click **SAVE**.

Tips: 8.8.8.8 is a safe and public DNS server operated by Google.

DHCP Server

Dynamically assign IP addresses to the devices connected to the router.

DHCP Server: ☒ Enable

IP Address Pool: -

Address Lease Time: minutes

Default Gateway: (Optional)

Primary DNS: (Optional)

Secondary DNS: (Optional)

- Restart the modem and the router.
 - 1) Power off your modem and router, and leave them off for 1 minute.
 - 2) Power on your modem first, and wait about 2 minutes until it gets a solid cable or Internet light.
 - 3) Power on the router.
 - 4) Wait another 1 or 2 minutes and check the internet access.
- Reset the router to factory default settings and reconfigure the router.
- Upgrade the firmware of the router.
- Check the TCP/IP settings on the particular device if all other devices can get internet from the router.

As the picture below shows, if the IP Address is 0.0.0.0, please try the methods below and try again:

Status

Internet status overview is displayed on this page.

Internet

Status: WAN port is unplugged

Internet Connection Type: Dynamic IP

IP Address: 0.0.0.0

Subnet Mask: 0.0.0.0

Default Gateway: 0.0.0.0

Primary DNS: 0.0.0.0

Secondary DNS: 0.0.0.0

- Make sure the physical connection between the router and the modem is proper.
- Clone the MAC address of your computer.

- 1) Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
- 2) Go to [Internet](#) or [Advanced](#) > [Network](#) > [Internet](#) and focus on the [MAC Clone](#) section.
- 3) Choose an option as needed (enter the MAC address if [Use Custom MAC Address](#) is selected), and click [SAVE](#).

 Tips:

- Some ISP will register the MAC address of your computer when you access the internet for the first time through their Cable modem, if you add a router into your network to share your internet connection, the ISP will not accept it as the MAC address is changed, so we need to clone your computer's MAC address to the router.
- The MAC addresses of a computer in wired connection and wireless connection are different.

- **Modify the LAN IP address of the router.**

 Note:

Most TP-Link routers use 192.168.0.1/192.168.1.1 as their default LAN IP address, which may conflict with the IP range of your existing ADSL modem/router. If so, the router is not able to communicate with your modem and you can't access the internet. To resolve this problem, we need to change the LAN IP address of the router to avoid such conflict, for example, 192.168.2.1.

- 1) Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
- 2) Go to [Advanced](#) > [Network](#) > [LAN](#).
- 3) Modify the LAN IP address as the follow picture shows. Here we take 192.168.2.1 as an example.
- 4) Click [SAVE](#).

- Restart the modem and the router.

- 1) Power off your modem and router, and leave them off for 1 minute.
 - 2) Power on your modem first, and wait about 2 minutes until it get a solid cable or Internet light.
 - 3) Power on the router.
 - 4) Wait another 1 or 2 minutes and check the internet access.
- Double check the internet connection type.
 - 1) Confirm your internet connection type, which can be learned from the ISP.
 - 2) Visit <http://tplinkwifi.net>, and log in with your TP-Link ID or the password you set for the router.
 - 3) Go to [Advanced](#) > [Network](#) > [Internet](#).
 - 4) Select your [Internet Connection Type](#) and fill in other parameters.
 - 5) Click [SAVE](#).

The screenshot shows the 'Internet' configuration page in a web interface. At the top, it says 'Internet' and 'Set up an internet connection with the service information provided by your ISP (internet service provider)'. Below this, there is a form with the following fields and options:

- Internet Connection Type:** A dropdown menu currently showing 'Dynamic IP'.
- IP Address:** A dropdown menu showing 'Static IP'.
- Subnet Mask:** A dropdown menu showing 'Dynamic IP'.
- Default Gateway:** A dropdown menu showing 'PPPoE'.
- Primary DNS:** A dropdown menu showing 'L2TP'.
- Secondary DNS:** A text input field containing '0.0.0.0'.

At the bottom of the form, there are two buttons: a blue 'RENEW' button and a grey 'RELEASE' button.

- 6) Restart the modem and the router again.
- Please upgrade the firmware of the router.

If you've tried every method above but still cannot access the internet, please contact the technical support.

Q5.What should I do if I can't find my wireless network or I cannot connect the wireless network?

If you fail to find any wireless network, please follow the steps below:

- Make sure the wireless function of your device is enabled if you're using a laptop with built-in wireless adapter. You can refer to the relevant document or contact the laptop manufacturer.

- Make sure the wireless adapter driver is installed successfully and the wireless adapter is enabled.

- **On Windows 7**

- 1) If you see the message [No connections are available](#), it is usually because the wireless function is disabled or blocked somehow.
- 2) Click [Troubleshoot](#) and windows might be able to fix the problem by itself.

- **On Windows XP**

- 1) If you see the message [Windows cannot configure this wireless connection](#), this is usually because windows configuration utility is disabled or you are running another wireless configuration tool to connect the wireless.
- 2) Exit the wireless configuration tool (the TP-Link Utility, for example).
- 3) Select and right click on [My Computer](#) on desktop, select [Manage](#) to open Computer Management window.
- 4) Expand [Services and Applications](#) > [Services](#), find and locate [Wireless Zero Configuration](#) in the Services list on the right side.
- 5) Right click [Wireless Zero Configuration](#), and then select [Properties](#).
- 6) Change [Startup type](#) to [Automatic](#), click on Start button and make sure the Service status is [Started](#). And then click [OK](#).

If you can find other wireless network except your own, please follow the steps below:

- Check the WLAN LED indicator on your wireless router/modem.
- Make sure your computer/device is still in the range of your router/modem. Move it closer if it is currently too far away.
- Go to [Wireless](#) or [Advanced](#) > [Wireless](#) > [Wireless Settings](#), and check the wireless settings. Double check your wireless Network Name and SSID is not hided.

If you can find your wireless network but fail to connect, please follow the steps below:

- **Authenticating problem/password mismatch:**

- 1) Sometimes you will be asked to type in a PIN number when you connect to the wireless network for the first time. This PIN number is different from the Wireless Password/Network Security Key, usually you can only find it on the label of your router.

- 2) If you cannot find the PIN or PIN failed, you may choose [Connecting using a security key instead](#), and then type in the [Wireless Password/Network Security Key](#).
- 3) If it continues to show note of [Network Security Key Mismatch](#), it is suggested to confirm the wireless password of your wireless router.

■ **Note:** Wireless Password/Network Security Key is case sensitive.

- **Windows unable to connect to XXXX / Can not join this network / Taking longer than usual to connect to this network:**
 - Check the wireless signal strength of your network. If it is weak (1~3 bars), please move the router closer and try again.
 - Change the wireless Channel of the router to 1, 6 or 11 to reduce interference from other networks.
 - Re-install or update the driver for your wireless adapter of the computer.

FCC compliance information statement

Product Name: BE9300 Tri-Band Wi-Fi 7 Router

Model Number: Archer BE9300

Component Name	Model
I.T.E. Power Supply	NBS30D120250VU

Responsible party:

TP-Link Systems Inc.

Address: 10 Mauchly, Irvine, CA 92618

Website: <http://www.tp-link.com/us/>

Tel: +1 626 333 0234

Fax: +1 909 527 6804

E-mail: sales.usa@tp-link.com

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modifications to this equipment. Such modifications could void the user's authority to operate the equipment.

FCC RF Radiation Exposure Statement

This equipment complies with FCC RF radiation exposure limits set forth for an uncontrolled environment. This device and its antenna must not be co-located or operating in conjunction with any other antenna or transmitter.

To comply with FCC RF exposure compliance requirements, this grant is applicable to only Mobile Configurations. The antennas used for this transmitter must be installed to provide a separation distance of at least 43 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

FCC regulations restrict operation of this device to indoor use only. The operation of this device is prohibited on oil platforms, cars, trans, boats, and aircraft, except that operation of this device is permitted in large aircraft while flying above 10000 feet. Operation of transmitters in the 5.925-7.125 GHz band is prohibited for control of or communications with unmanned aircraft systems.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

We, **TP-Link Systems Inc.**, has determined that the equipment shown as above has been shown to comply with the applicable technical standards, FCC part 15. There is no unauthorized change is made in the equipment and the equipment is properly maintained and operated.

Issue Date: 2025-04-17

Safety Information

- Keep the device away from water, fire, humidity or hot environments.
- Do not attempt to disassemble, repair, or modify the device. If you need service, please contact us.
- Do not use damaged charger or USB cable to charge the device.
- Do not use any other chargers than those recommended.
- Do not use the device where wireless devices are not allowed.
- Adapter shall be installed near the equipment and shall be easily accessible.
- Use only power supplies which are provided by manufacturer and in the original packing of this product. If you have any questions, please don't hesitate to contact us.
- Operating Temperature: 0°C ~ 40°C (32°F ~ 104°F)
- This product uses radios and other components that emit electromagnetic fields. Electromagnetic fields and magnets may interfere with pacemakers and other implanted medical devices. Always keep the product and its power adapter more than 15 cm (6 inches) away from any pacemakers or other implanted medical devices. If you suspect your product is interfering with your pacemaker or any other implanted medical device, turn off your product and consult your physician for information specific to your medical device.

Please read and follow the above safety information when operating the device. We cannot guarantee that no accidents or damage will occur due to improper use of the device. Please use this product with care and operate at your own risk.

Explanations of the symbols on the product label

Note: The product label can be found at the bottom of the product and its I.T.E. power supply. Symbols may vary from products.

Symbol	Explanation
	Class II equipment
	Class II equipment with functional earthing
	Alternating current
	Direct current
	Polarity of d.c. power connector
	For indoor use only
	Dangerous voltage

Symbol	Explanation
	Caution, risk of electric shock
	Energy efficiency Marking
	Protective earth
	Earth
	Frame or chassis
	Functional earthing
	Caution, hot surface
	Caution
	Operator's manual
	Stand-by
	"ON" / "OFF" (push-push)
	Fuse
	Fuse is used in neutral N

Symbol	Explanation
	RECYCLING This product bears the selective sorting symbol for Waste electrical and electronic equipment (WEEE). This means that this product must be handled pursuant to European directive 2012/19/EU in order to be recycled or dismantled to minimize its impact on the environment. User has the choice to give his product to a competent recycling organization or to the retailer when he buys a new electrical or electronic equipment.
	Caution, avoid listening at high volume levels for long periods
	Disconnection, all power plugs
m	Switch of mini-gap construction
μ	Switch of micro-gap construction (for US version) Switch of micro-gap / micro-disconnection construction (for other versions except US)
ε	Switch without contact gap (Semiconductor switching device)
