

Quick Installation Guide

BE3600 Wi-Fi 7 Portable Router

Images may differ from your actual product.
©2025 TP-Link 7100000996 REV1.0.2

Appearance

LED Indication

Status	Indication
Pulsing Orange	The router is starting up.
Pulsing Blue	The router is being upgraded.
Blinking Blue	WPS connection is being established.
Solid Blue	The router is connected to the internet or the main network, or the WPS connection is successfully established.
Solid Orange	The router is connected to the internet and the Wi-Fi is off.
Solid Red	The router is disconnected from the internet.
Blinking Red	The router is disconnected from the internet, and Wi-Fi is off.

Interface Description

2.5 Gbps WAN Port	As a WAN port (by default): For connecting it to your modem, the Ethernet outlet, or for other internet services. As a LAN port (need to set manually): For connecting your PC or other wired devices to the router.
1 Gbps LAN Port	For connecting your PC or other wired devices to the router.
USB 3.0 Port	Use this USB 3.0 port to connect your 3G/4G/5G USB modem, mobile device, or USB storage device to the router.
Power Port	For connecting the USB-C charger provided in the package.

Button Description

Action Switch	The customizable action switch offers you a physical shortcut to control a variety of functions, including Wi-Fi, LED and VPN Merge.
WPS/Reset Button	Press the button for 1 second and immediately press the WPS button on your client to start the WPS process. Press and hold the button for about 6 seconds until the LED pulses orange to reset the router to its factory default settings.

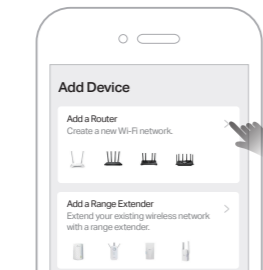

Set Up Your Router

Method ONE: Via the Tether App

1. Download the Tether app via Apple Store or Google Play, or simply scan the QR code.

2. Open the Tether app and log in with your TP-Link ID.
Note: If you don't have an account, create one first.

*Router network mode compatibility in the Tether app may vary between app versions.

3. Tap the **+** button in the Tether app and select **Add a Router**.
Note: Due to Tether app updates, your actual user interface and pathway may differ from those depicted here.

4. Choose how you would like to connect your router to the internet. Then follow the steps to complete the setup.
 - **Connect via Ethernet:** The router gets internet via an Ethernet cable connected to the existing wired network.
 - **Connect via Wi-Fi:** The router gets internet via an existing public Wi-Fi and turns it into a private network.
 - **Connect via Mobile USB:** The router gets internet via a USB cable connected to a mobile device (with a SIM card inserted).
 - **Connect via USB Modem:** The router gets internet from a USB modem (with a SIM card inserted).

Note: If you want to use it in Access Point/Extender Mode, go to **More > Operation Modes** to switch the mode as needed. For Client Mode, follow Method TWO to switch the mode on the web page.

😊 **Enjoy the internet!**

To enjoy a more complete service from TP-Link, bind your TP-Link ID to the router.

Method TWO: Via a Web Browser

1. Power on the router.
2. Wait until the router's LED turns solid (blue or red) before moving on.
3. Connect your device to the router (wireless or wired).
 - **Wireless:** Connect your device to the router's Wi-Fi. The default wireless network names (SSIDs) and wireless password are printed on both the Wi-Fi info card and the label at the bottom of the router.
 - **Wired:** Turn off the Wi-Fi on your device and connect to the **LAN** port of the router with an Ethernet cable.

4. Launch a web browser and enter **http://tplinkwifi.net** or **http://192.168.0.1** in the address bar. Create a password to log in.

Note: If the login window does not appear, please refer to **Q1** of **Need Help?** in this guide.

5. Choose how you would like to connect your router to the internet. Then follow the steps to complete the setup.
 - **Connect via Ethernet:** The router gets internet via an Ethernet cable connected to the existing wired network.
 - **Connect via Wi-Fi:** The router gets internet via an existing public Wi-Fi and turns it into a private network.
 - **Connect via Mobile USB:** The router gets internet via a USB cable connected to a mobile device (with a SIM card inserted).
 - **Connect via USB Modem:** The router gets internet from a USB modem (with a SIM card inserted).

Note: If you want to use it in Access Point/Extender/Client Mode, exit the quick setup, and click **Change Mode** on top of the page, then select the mode as needed.

😊 **Enjoy the internet!**

To enjoy a more complete service from TP-Link, bind your TP-Link ID to the router.

Network Modes

Network Mode	Recommended Scenarios	I Want to...	Requirements
Router	During Travel (e.g., hotel, airport, cafe, cruise ship, RV, camp, etc.)	Share the internet with more wireless devices when the wired network is limited to one device at a time.	An existing wired network provided by a modem or other network device.
3G/4G/5G USB Modem		Share a 3G/4G/5G USB modem's data with other devices.	A 3G/4G/5G USB modem (with a SIM card inserted).
USB Tethering		Share a mobile device's cellular data with other devices.	<ul style="list-style-type: none">• A mobile device (with a SIM card inserted).• A USB cable.
Hotspot		Turn an existing public Wi-Fi into a private network (wired and wireless).	A public Wi-Fi.
Access Point	At Home (e.g., home, office, etc.)	Turn an existing wired-only network into a wireless network.	An existing wired network provided by a router, switch, etc.
Range Extender		Expand an existing Wi-Fi network for better Wi-Fi coverage.	An existing Wi-Fi network.
Client		Connect a wired-only device, such as a smart TV, media player, or game console, to a Wi-Fi network.	An existing Wi-Fi network.

Wi-Fi Information

The default wireless network names (SSIDs) and wireless password are printed on the label at the bottom of the router.

A Wi-Fi info card is included in the package.

When you set new SSIDs, Wi-Fi passwords, login account info, and more, please write them down on the card for convenient management.

Secure Surfing with VPN Encryption

Encryption Access

Better Adaptability

More Devices

Remote Network

Auto Connect

Two Functions

The router supports **VPN Server** and **VPN Merge**.

By setting up a VPN Merge, the device connected to the router can directly access the VPN server for remote office and cross-regional access. At the same time, your personal information is encrypted and protected.

With VPN Server, external devices can access the VPN server, including remote desktops, NAS, printers, cameras, and other devices in the home network.

• **Setup via Tether:** Go to **More > Advanced Settings > VPN Server/VPN Merge**.

• **Setup via Web:** Log in to the web management page of the router and go to **Advanced > VPN Server/VPN Merge**.

Frequently Asked Questions (FAQ)

Q1. What should I do if I can't access the web management page?

- Reboot your router and try again.
- If the computer is set to a static IP, change its settings to obtain an IP address automatically.
- Verify that <http://tplinkwifi.net> is correctly entered in the web browser. Alternatively, enter <http://192.168.0.1> or <http://192.168.1.1>. For **AP/RE/Client** modes, enter **192.168.0.254** in the web browser.
- Use another web browser and try again.
- Disable and enable the network adapter in use.

Q2. What should I do if I forget the router's web management password?

- If you are using a TP-Link ID to log in, click **Forgot Password?** on the login page and then follow the instructions to reset it.
- Alternatively, refer to **FAQ > Q3** to reset the router. Then visit <http://tplinkwifi.net> to create a new login password.

Q3. How do I restore the router to its factory default settings?

- With the router powered on, press and hold the **Reset** button for 6 seconds until the LED pulses orange to restore the factory default settings.

Q4. What should I do if there is no internet access?

- Check if the internet is working normally by connecting a computer/phone directly to the current network. If it is not, contact your internet service provider. If you're in a hotel room or on a trade show, the internet may be limited and requires that you authenticate for the service or purchase the internet access.
- If you are using a cable modem, power off your modem for about 5 minutes, then power it on and check the internet. If your modem has more than one Ethernet port, keep other ports unconnected.
- Log in to the web management page, and go to the **Network Map** page to check whether the internet IP address is valid or not. If it's valid, go to **Advanced > Network > Internet**, click **Advanced Settings**, select **Use the Following DNS Addresses**, set the primary DNS to 8.8.8.8, and set the secondary DNS to 8.8.4.4. If it is not, check the hardware connection or contact your internet service provider.

Q5. What should I do if I forget my Wi-Fi password?

- If you have not changed the default wireless password, it can be found on the label of the router.
- Connect a computer directly to the LAN port of the router using an Ethernet cable. Log in to the router's web management page at <http://tplinkwifi.net>, and go to the **Wireless** page to retrieve or reset your wireless password.

Q6. What should I do if my wireless signal is unstable or too weak?

- It may be caused by too much interference.
- Set your wireless channel to a different one.
- Choose a location with fewer obstacles that may block the signal between the portable router and the main AP. An open corridor or a spacious location is ideal.
- Move the router to a new location away from Bluetooth devices and other household electronics, such as cordless phones, microwaves, and baby monitors, to minimize signal interference.
- In **Range Extender** mode, the ideal location to place the router is halfway between your main AP and the Wi-Fi dead zone. If that is not possible, place the router closer to your main AP to ensure stable performance.

Q7. What should I do if I cannot enter the captive portal when the router is set to Hotspot mode?

- If the portal login page didn't open during the Quick Setup process, connect your smartphone or computer to the router, then open any website, and you will be redirected to the portal login page.
- If some public hotspots limit the number of devices each customer can access by MAC address, do the following:
 1. Connect a smartphone to the public hotspot's Wi-Fi. Find the smartphone's MAC address on its Wi-Fi list, and write the MAC address down.
 2. Log in to the web management page of the router and go to **Advanced > Network > Internet > Network Connection Priority > Hotspot Settings > Router MAC Address**. Select **Use Custom MAC Address**, enter the MAC address that your smartphone uses to connect to the public hotspot's Wi-Fi, and click **SAVE**.

Q8. What should I do if I want to change the router's network mode?

1. Log in to the web management page of the router and go to **Advanced > System > Operation Mode** or click **Change Mode** on top of the page.
2. Select your desired network mode, and click **SAVE**. Then follow the instructions to complete the settings.

Safety Information

- Keep the device away from water, fire, humidity or hot environments.
- Do not attempt to disassemble, repair, or modify the device. If you need service, please contact us.
- Do not use damaged charger or USB cable to charge the device.
- Do not use any other chargers than those recommended.
- Do not use the device where wireless devices are not allowed.
- Adapter shall be installed near the equipment and shall be easily accessible.

Please read and follow the above safety information when operating the device. We cannot guarantee that no accidents or damage will occur due to improper use of the device. Please use this product with care and operate at your own risk.

TP-Link hereby declares that the device is in compliance with the essential requirements and other relevant provisions of directives 2014/53/EU, 2009/125/EC, 2011/65/EU and (EU) 2015/863.
