## PoE Injector Only

The PoE injector supplies steady power and data connectivity to a powered device such as a PoE IP camera, PoE AP, and PoE IP phone through an Ethernet cable.

## PoE Splitter Only

The PoE splitter can be used with a PoE switch to deliver direct current (DC) power and data to a Non-PoE device.

## PoE Injector & Splitter

The PoE injector and PoE splitter can be used as a kit to supply power and transmit data to a Non-PoE device.

# Power LED Explanation

## PoE Injector:

**On:** Supplying power normally  
**Off:** No power supply

## FAQ

### Q1. Can the PoE injector supply power to a PoE device which doesn't have a gigabit PoE port?

**A:** Yes. All RJ45 ports of the PoE injector support 10/100/1000 Mbps auto-negotiation.

### Q2. What can I do if my PoE injector doesn't supply power to the powered device or the supplied power is unstable?

- A1:** Ensure the PD is PoE-compliant and its connecting port supports the PoE function.
- A2:** Ensure the power consumption of the PD doesn't exceed 15.4 W, otherwise the overload protection of the PoE injector will be activated. The quality and length of the Ethernet cable may influence the reception of the power supply.

### Q3. Must I use the PoE injector together with the PoE splitter?

**A:** No. The PoE injector can supply power to all PDs supporting the PoE function. The PoE splitter is used with a PoE switch or the PoE injector to supply power to a non-PoE device.

### Q4. The Power LED of the PoE injector is not lit.

- A1:** Ensure the power cord is connected to the PoE injector with a power source properly.
- A2:** Ensure the power consumption of the PD doesn't exceed 15.4 W; otherwise, the PoE injector will activate the overload protection and the power will be cut off.

## Safety Information

- Keep the device away from water, fire, humidity or hot environments.
- Do not attempt to disassemble, repair, or modify the device. If you need service, please contact us.
- Do not use any other chargers than those recommended.
- Do not use damaged charger or USB cable to charge the device.

Please read and follow the above safety information when operating the device.

We cannot guarantee that no accidents or damage will occur due to improper use of the device. Please use this product with care and operate at your own risk.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/ TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

We, TP-Link Systems Inc., has determined that the equipment shown as above has been shown to comply with the applicable technical standards, FCC part 15. There is no unauthorized change is made in the equipment and the equipment is properly maintained and operated.
