†Maximum wireless signal rates are the physical rates derived from IEEE Standard 802.11 specifications. Actual wireless data throughput and wireless coverage, and quantity of connected devices are not guaranteed and will vary as a result of network conditions, client limitations, and environmental factors, including building materials, obstacles, volume and density of traffic, and client location.

‡Clients need to support 802.11 k/v/r and may require additional setup. Performance may vary depending on the client device.

<sup>^</sup>Use of Wi-Fi 6 and other features including OFDMA, MU-MIMO, 1024-QAM, and BSS Color require clients to also support the corresponding features.

<sup>§</sup>HomeShield includes both basic and advanced features. Advanced features require a paid subscription. For details, visit [tp-link.com/homeshield](http://tp-link.com/homeshield).

<sup>†</sup>Use of WPA3 encryption requires clients to also support the corresponding feature.

<sup>\*\*</sup>Maximum 5G download speeds depend on external factors such as the local 5G network coverage, data plan, real-time network capacity, client limitations, and environmental factors. Supported 5G frequency bands: n1/n3/n5/n7/n8/n20/n28/n38/n40/n41/n75/n76/n77/n78. Actual supported frequency bands may vary slightly in different regions due to certification.

<sup>\*\*\*</sup>All WAN/LAN ports will operate as either WAN or LAN ports. Only one port can serve as a WAN port at a time.

Actual network speed may be limited by the rate of the product's Ethernet WAN or LAN port, the rate supported by the network cable, Internet service provider factors and other environmental conditions.
