New Feature/Enhancement:

1. Add “Select Page” feature on the management page of vouchers.
2. Change the default status of “Terms of Service” to uncheck.
3. Optimize the “Free Authentication Policy” to support URL with suffixes.
4. Change the default status of new added “Free Authentication Policy” to enable.

Bug Fixed:

1. Fixed the bug that when clients disconnect from the Facebook portal, the connection time and traffic usage of these clients may be zero in the log.

2. Fixed the bug that AP may disconnect from Omada Controller when it is upgrading the firmware.
3. Fixed the bug that in some cases, the channel configuration of 2.4G frequency may show up in 5G by mistake.
4. Fixed the bug that the configuration of SSID will not be issued correctly when changing the WLAN Group on the provisioning status.

Notes:

1. To use new features on Omada Controller 3.2.x, you need to upgrade your EAP's firmware to the corresponding version.
2. The Omada Controller program needs to use the system's netstat command. If the Linux system does not have net-tools installed (which contain the netstat command), the program may not be able to run normally.
3. Support 64-bit Linux operating system including Ubuntu 14.04/16.04/17.04/18.04, CentOS 6.x/7.x and Fedora 20 or above, Debian 9.8.
4. Built-in JRE 1.8 Java environment.
5. Once upgraded to this version of Omada Controller, you will NOT able to downgrade to an earlier version.
6. Portal configuration will be lost after upgraded to Omada Controller 3.2.X from 2.4.8.
7. When upgrading from Controller 2.5.3 Linux to this version via install.sh, you need to uninstall old version of Controller first.
