New Feature/Enhancement:

1. Add the feature that the system logs can be exported.
2. Change the priority that non-administrator role cannot change the history data retention settings.
3. Optimize the UI of Statistics in Omada Controller.

Bug Fixed:

1. Fix the bug that the External Web Portal cannot authenticate successfully if the SSID of this portal has special characters.
2. Fix the bug that the Cloud Access cannot be displayed normally in the low version of Firefox.

Notes:

1. To use new features on Omada Controller 3.2.x, you need to upgrade your EAP's firmware to the corresponding version.
2. The Omada Controller program needs to use the system's netstat command. If the Linux system does not have net-tools installed (which contain the netstat command), the program may not be able to run normally.
3. Support 64-bit Linux operating system including Ubuntu 14.04/16.04/17.04/18.04, CentOS 6.x/7.x and Fedora 20 or above, Debian 9.8.
4. Built-in JRE 1.8 Java environment.
5. Once upgraded to this version of Omada Controller, you will NOT able to downgrade to an earlier version.
6. Portal configuration will be lost after upgraded to Omada Controller 3.2.X from 2.4.8.
7. When upgrading from Controller 2.5.3 Linux to this version via install.sh, you need to uninstall old version of Controller first.
