

New Features:

1. Added support for using the PC client without logging in.
2. Added support for logging in with TP-link ID to remotely manage personal devices, VIGI Cloud VMS, and VIGI VMS with Cloud access.
3. Added support for exporting video recordings.
4. Added support for adding and managing devices.
5. Added support for one-click replay.
6. Added support for continuous playback across days.
7. Added support for switching between previous and next events on the playback timeline and playing.
8. Added support for EPTZ and target tracking, which requires the use of the IPC 385dps model.
9. Added support for controlling the IPC alarm output interface device, which currently requires the use of the IPC 345/445ZI models.

Enhancements:

1. Optimized the speed and stability of preview and playback pull streams.
2. Optimized the startup speed of the client side.
3. Optimized the resolution and zoom display of each screen.
4. Optimized the playback effect at double speed.
5. Optimized the UI theme color.

6. Optimized the layout of the preview and playback interfaces to enhance the user experience of playing-related functions.

Bug Fixes:

1. Fixed the abnormal playback issue in the Thai language environment.
2. Fixed some UI pop-up display issues on high-definition screens.
