New Features:

1. Added support for Personal Edition login, enabling preview, playback, event center, device configuration, device sharing, and video export for LAN-connected devices.

2. Added support for displaying Smart Frame and Rule Frame on the Live View page.

3. Added support for automatic device discovery and manual addition on the Live View and Playback pages.

4. Added support for accessing device settings directly from the Live View and Playback pages on the personal edition.

5. Added support for dragging devices from the device list to the playback panel for quick playback.

6. Supported help and feedback.

7. Added support for simultaneous display of panoramic and zoomed-in views via the electronic zoom feature.

8. Added support for synchronized display between the playback toolbar and the playback window.

9. Added support for setting the intelligent playback ratio on the Live View page.

10. Integrated the view list and device list.

11. Added support for filtering playback timeline segments by Human, Vehicle and Pet detection.

12. Added support for NVR sub-event filtering on the Playback page.

13. Added support for more window layout styles.

14. Changed the playback forward and backward jump time from 30 seconds to 10 seconds.

15. Added support for enabling preview video carousel functionality via a whitelist.

Enhancements:

1. Optimized menu interaction, Live View and Playback pages now open by default.

2. Optimized client system settings.

3. Optimized the interaction of playback speed adjustment.
