Modifications and Bug Fixes:

1. Device Account Feature added: Automatically set the usernames and passwords for devices adopted (firmware of the devices should be the latest);

2. Added support for Google Map Token;

3. Security enhanced as a certificate will be created when new version starts for the first time;

4. Security enhanced as password rule verification will be initiated every time the password is set or changed;

5. Anti-brute-force protection introduced as accounts will be locked after consecutive failed adopting or login attempts;

Notes:

1. This version of the firmware has enhanced overall security.

2. A delay upon the first startup after upgrading may be observed.
